REPORT

OF THE

Department of Mines

OF PENNSYLVANIA

---

Part II—Bituminous

---

1909

---

HARRISBURG:

C. E. AUGHINBAUGH, PRINTER TO THE STATE OF PENNSYLVANIA

1910

**REPORT**  
**DEPARTMENT OF MINES**

**LETTER OF TRANSMITTAL**

---

Department of Mines,

May 7, 1910.

To His Excellency, Edwin S. Stuart, Governor of Pennsylvania:

Sir: In compliance with the Act of Assembly of April 14, 1903, I beg to submit herewith, for transmission to the General Assembly, the report of the Department of Mines for the year ending December 31, 1909. Part I covers in detail the operations in the twenty Anthracite Districts, Part II the operations in the twenty-one Bituminous Districts, as returned by the inspectors. Observations and suggestions are also offered relative to mining subjects.

Respectfully submitted,

JAMES E. RODERICK,  
Chief of Department of Mines.

# REPORT

OF THE

## DEPARTMENT OF MINES

### INTRODUCTION

The year 1909 was a fairly prosperous one in the coal industry of Pennsylvania. The bituminous output amounted to 136,205,695 tons as compared with 114,937,375 tons in 1908, an increase of 21,268,320 tons, which shows a healthy recovery from the depression that followed the panic of 1907. The anthracite output, however, amounted to only 80,223,833 tons, as against 83,543,243 tons in 1908, a decrease of 3,319,410 tons. This reduction was due chiefly to adverse financial conditions, and it is believed that during 1910 the recovery in the various lines of industry will result in bringing the anthracite tonnage back to the great production of 1907. Had the price of bituminous coal been higher the operators might be deemed to have had a very profitable year, but it is a well known fact that for sometime past the large consumers have been getting coal at bargain prices. Keen competition and a not overly active market, in conjunction with a lack of organization among the operators, have resulted in a total abolition of profit in some instances and in a lamentable cutting down generally. It is a fact that it has cost some operators in the Central Pennsylvania district more to produce coal during the year than they have obtained for it. Certain it is that the margin of profit on soft coal for the past two years has been too small, if the hazardous nature of the business be considered. It is rather unfortunate, from the viewpoint of the bituminous operators, that they cannot restrict the production to meet more nearly the needs of the trade, as is done in the anthracite region, and thus avoid over-production, which of necessity means lower prices.

The present conditions, however, indicate that the coming year may be more prosperous, if prices are adjusted to net a reasonable profit, and undoubtedly the operators will endeavor to obtain higher prices in keeping with the higher prices that prevail in other commodities.

The redeeming feature of the bituminous trade was the increase in the production of coke. In 1908 the production fell to 13,839,656

tons; in 1909 it rose again to 22,503,944 tons, and as the prices were high, reaching in some instances \$3.00 a ton at the ovens, the result to the producers was exceedingly satisfactory.

The year was singularly free from accidents from explosions of gas and dust. The mines that are deemed dangerous escaped entirely from serious explosions, and, strange to say, the only explosions of consequence that occurred during the year occurred in the so-called safe non-gaseous mines, one at Wehrum by which 21 persons were killed, and one at Franklin by which 13 persons were killed, both in Cambria county. This record is one to be proud of and reflects credit upon the work of the inspectors, the supervision of the mine officials and the carefulness of the employees. As a general thing, accidents are attributed to the ignorance of the employees or to their neglect to obey the rules of safety; and the charge is frequently well founded, especially where large numbers of foreigners, unfamiliar with the English language, are employed. These men, unable to read the rules of the mine and frequently incapable of comprehending the instructions and advice given them, are a constant menace to life, especially in gaseous mines. In this State, where mine management has reached a high degree of perfection, where State supervision is constant and capable, and where the equipment is generally the best and most modern, one would naturally expect to find the number of casualties correspondingly low, but unfortunately this has not been the case. The conditions that tend to safety are generally nullified by the carelessness and incompetency of certain employees, and no great improvement can be hoped for until the foreign element is educated sufficiently to work more intelligently and with more regard for the physical welfare, not only of themselves, but of their fellow-workmen. The rules of the mine should also be made more stringent and there should be more stringent enforcement of them. To charge, however, that miners as a class are lacking in intelligence and carefulness is an unfair and unjust aspersion upon a most worthy army of workers, among whose ranks are to be numbered many men who are not only skillful and careful, but are also keenly alert mentally. The frequent graduation of these men to positions of responsibility in the mining industry and their ability to make a place for themselves in the social affairs of the community conclusively show their caliber morally, mentally and intellectually.

It may be mentioned here in connection with the matter of accidents that Pennsylvania, by reason of her great prominence in the mining industry, is subjected to much undue criticism for the fatalities that occur within her boundaries, and is being constantly compared with other States and countries, frequently to her disadvantage, but as the death toll by accidents during the past year has been somewhat reduced in this State, we give herewith a comparison with the figures reported from Great Britain, a country noted for careful and conservative mine management.

In 1908 the production of Great Britain was 261,512,214 tons, and the number of fatal accidents inside, 1,162, or 4.44 lives lost for every 1,000,000 tons produced. The production of the bituminous mines of Pennsylvania in 1908 was 114,937,375 tons, and the number of fatal accidents inside 550, or 4.78 lives lost for every 1,000,000 tons produced.

In 1909 the production of Great Britain was 263,758,562 tons and the number of fatal accidents inside 1,317, or 4.99 lives lost for every 1,000,000 tons produced. The production of the bituminous mines of Pennsylvania was 136,205,695 tons, and the number of fatal accidents inside 475, or 3.49 lives lost for every 1,000,000 tons produced. The average for the two years shows that for every 1,000,000 tons produced in Great Britain 4.71 lives were lost; and for every 1,000,000 tons produced in the bituminous mines of Pennsylvania 4.13 lives were lost, a result somewhat favorable to Pennsylvania.

We desire to call attention to the number of tons produced per employe. In Great Britain in 1908 the number of tons was 328 per inside employe; in Pennsylvania, 753 tons. In Great Britain, in 1909, the number of tons produced per inside employe was 322; in Pennsylvania, 893 tons. The vast difference between these figures relating to the two territories indicates the strenuous and rapid methods in vogue among the Pennsylvania workmen, and speaks volumes for the energy, activity and resourcefulness of our miners. At the same time they make clear one of the great causes of accidents, and no fair comparison can be made without taking into consideration the matter of production per employe.

In keeping with the constant desire of the department to improve the conditions that surround the mining industry, a change was made July 1 in the inspection districts of the bituminous region by which twelve of the inspectors were transferred to new locations. This change, it was felt, was necessary in order to enforce full compliance with the provisions of the mining laws. The department was impelled to this action by a remark of one of the mine superintendents or managers who appeared before the Committee on Mines and Mining at the last session of the Legislature. He stated, "The inspectors themselves are responsible for the great loss of life in their respective districts because they do not enforce compliance with the provisions of the mining laws." While deeming this statement a most unfair criticism upon the work of the inspectors, the department thought that perhaps a transference of inspectors, as stated above, might be conducive to better results. The change was therefore made and has in some ways proved a beneficial one, particularly to the mine employes.

In reviewing the year mention should be made of the work of the Pittsburg Testing Station, established by the Technologic Branch of the Geological Survey of the United States Government. The station has tested many explosives, and has from time to time issued Bulletins naming the explosives that are deemed safe and satisfactory for use in the mines. They are designated as "permissible" explosives. This is an important and necessary work and will, no doubt, result ultimately in reducing explosions in the mines, a condition that not only the miners and officials will welcome, but a condition that the public in general will approve and commend. With the use of permissible explosives in gaseous and dusty mines, the exercise of sound judgment in dampening and removing the dust and proper attention given to ventilation, the possibility of explosions will be greatly lessened.

Another notable and commendable feature of the year was the establishment by some of the larger companies of rescue stations equipped with safety helmets for use in conducting rescue work after

explosions have occurred. It is to be hoped that the loss of life will be reduced by the use of these appliances that make it possible for men to penetrate into the mines where the gas and afterdamp have heretofore rendered their entrance impossible. It may also be mentioned in connection with the subject of safety that in some sections the companies have issued strict orders prohibiting the use of intoxicating liquors by their employes. As the penalty for disobedience of these orders is dismissal, the result of this action will no doubt be the elimination, to some extent at least, of a fruitful source of danger. All things considered, a hopeful view may be taken of the future of the coal industry in Pennsylvania. In fact, so far as safety is concerned, the best thought of the Department of Mines, the State inspectors, mining engineers, superintendents and managers is being given to the invention and adoption of appliances and means that will afford greater safety to the thousands of persons employed in this industry, conserve the great coal deposits and protect the vast and costly plants that have been established throughout the mining region.

Mention may also be made of the legislation proposed for the protection of life and property about the coal mines. In several States attempts are being made either to revise the present laws or enact new ones, and the time is probably not far distant when all will have been done in the way of legal enactment that it is possible to do to relieve this great industry of the reproach brought upon it by reason of inadequate protective measures. In Pennsylvania a comprehensive bill, prepared by a commission created by Legislative authority, was submitted to the Legislature at the session of 1909, but it never became a law, not even having been reported out of committee. Some account of this proposed legislation is given elsewhere in this report.

Other matters treated of elsewhere in this report are: The Use of Permissible Explosives; Recent Explosions of Gas and Dust; Child Labor; Pensions for Widows and Orphans, and The Proposed Mine Law.

## COAL PRODUCTION

The table herewith shows the actual number of days worked in each district during 1909, and the average daily production; also the average production per day for the region, 646,889 tons. Assuming that the mines had worked 280 days, the total bituminous production would have been 181,128,920 tons. The table also shows the production of each district on the same basis. In arriving at the average number of tons produced per day, the total number of days was divided into the total production of each mine in each district:

| Districts           | Average number of days worked | Production  | Average production per day | Estimated production of 280 days |
|---------------------|-------------------------------|-------------|----------------------------|----------------------------------|
| First, -----        | 205                           | 5,769,941   | 28,146                     | 7,880,880                        |
| Second, -----       | 233                           | 8,689,340   | 37,293                     | 10,442,040                       |
| Third, -----        | 199                           | 3,565,252   | 17,916                     | 5,016,480                        |
| Fourth, -----       | 200                           | 6,337,112   | 31,686                     | 8,872,080                        |
| Fifth, -----        | 233                           | 7,216,028   | 30,970                     | 8,671,600                        |
| Sixth, -----        | 226                           | 7,833,115   | 34,660                     | 9,704,800                        |
| Seventh, -----      | 171                           | 7,152,877   | 41,829                     | 11,712,120                       |
| Eighth, -----       | 183                           | 3,924,068   | 21,443                     | 6,004,040                        |
| Ninth, -----        | 258                           | 7,946,296   | 30,800                     | 8,624,000                        |
| Tenth, -----        | 181                           | 5,397,972   | 29,823                     | 8,350,440                        |
| Eleventh, -----     | 228                           | 7,794,985   | 34,189                     | 9,572,920                        |
| Twelfth, -----      | 201                           | 7,768,463   | 38,649                     | 10,821,720                       |
| Thirteenth, -----   | 198                           | 6,316,405   | 31,901                     | 8,932,280                        |
| Fourteenth, -----   | 222                           | 5,676,494   | 25,570                     | 7,159,600                        |
| Fifteenth, -----    | 197                           | 7,272,987   | 36,919                     | 10,337,320                       |
| Sixteenth, -----    | 263                           | 7,082,047   | 26,928                     | 7,539,840                        |
| Seventeenth, -----  | 193                           | 6,006,011   | 31,119                     | 8,713,320                        |
| Eighteenth, -----   | 165                           | 3,053,509   | 18,506                     | 5,181,680                        |
| Nineteenth, -----   | 228                           | 7,920,205   | 34,738                     | 9,726,640                        |
| Twentieth, -----    | 205                           | 5,577,644   | 27,198                     | 7,615,440                        |
| Twenty-first, ----- | 216                           | 7,906,944   | 36,606                     | 10,249,680                       |
| Totals, -----       | -----                         | 136,205,695 | 646,889                    | 181,128,920                      |

## THE USE OF PERMISSIBLE EXPLOSIVES

Owing to the many explosions that occur in coal mines, the question of safety, in so far as the kind of explosives used is concerned, has become one of the most prominent questions in connection with the operation of the mines. Realizing that loss of life and damage to the mines are frequently due to the use of black powder, the Department has been endeavoring to stop the use of this explosive in mines where its use might be disastrous. Beginning with the first of the year the so-called safety explosives have been recommended for use in several of the most gaseous bituminous mines, but just

what particular explosives should be used could not be determined until the result was known of the tests made by the Testing Station established at Pittsburg by the United States Geological Survey.

The subject was brought vigorously to the attention of the inspectors in a communication addressed to them under date of July 12. This communication was the direct result of the charge (referred to in the Introduction of this report) that the inspectors were responsible for the loss of life in their several districts. The Department urged upon them the necessity for exacting strict compliance with the mining laws in regard to safety conditions; the use of permissible explosives (as determined by the Testing Station) in gaseous and dusty mines was demanded; and the use of black powder, wherever its use was a menace to life, was prohibited. The ruling of the Department in this letter regarding the use of black powder and permissible explosives met with great opposition from the mine workers and resulted in considerable correspondence on the subject. A brief history of the circumstances, together with the letter of the Department to the inspectors and other correspondence relating to the case, is given herewith. The bulletin issued by the United States Geological Survey in regard to tests made of explosives is also reproduced, together with a list of the explosives that have up to date been tested and approved.

Copy of letter sent to Inspectors under date of July 12, 1909:

Dear Sir: Insist on having ample ventilation at all working faces of rooms and entries. Pay no attention to maximum quantity of air as provided by law, but insist on ample ventilation at the working faces "to an extent that will dilute, carry off and render harmless the noxious and dangerous gases."

In measuring the quantity of air in any split you are hereby directed to take the measurement in the last cut-through beyond the last room turned on each entry, or in the entry beyond the last room turned.

In gaseous and dusty mines do not allow the use of any explosives except "permissible" explosives, as determined by the Testing Station at Pittsburg.

If in your opinion the use of black powder in a non-gaseous mine is a menace to life, you are directed to notify the mine foreman, superintendent or manager of that fact, and if they insist on the continued use of black powder against your protest, you will report the matter to the Department of Mines, and two or more of the other Inspectors will be sent to assist you in making further investigation. A report of the inspectors' investigation shall be sent to the mine foreman, superintendent or manager, and also to the Department of Mines.

Your attention is called to Sections 1, 2, 3 and 4 of Article 5 of the Mine Law. You will demand strict compliance with their provisions.

Your attention is also called to Section 5 of Article 5. This section is broad and comprehensive, but not definite enough. When in your opinion a mine or a section of a mine should be worked by the use of safety lamps exclusively, you are directed to so notify the mine foreman, superintendent or manager. If they refuse to comply with your request, you will notify the Department of Mines immediately, and two or more of the other inspectors will be sent to assist you in making further investigation. A report of the inspectors' investigation shall be sent within five days to the mine foreman, superintendent or manager, and also to the Department of Mines.

Section 5 of Article 5 also provides that, "In all mines or parts of mines worked with locked safety lamps the use of electric wires and electric currents is positively prohibited, unless said wires and machinery and all other mechanical devices attached thereto and connected therewith are constructed and protected in such a manner as to secure freedom from the emission of sparks or flame therefrom into the atmosphere of the mine." This provision is very important, and you are hereby directed to see that in all the mines in your district wherein electricity is used as power for haulage, coal-cutting, pumping or winding, the above provision is fully complied with. When you find any violation of this part of Section 5, it shall be your duty to notify at once the mine foreman, superintendent or manager of the fact, with a request that they comply with said provision of the law. If they fail or refuse to comply, you will at once notify the Department of Mines, and two or more of the other Inspectors will be sent to assist you in making a final investigation of the matter. A report of said investigation shall be sent to the mine foreman, superintendent or manager, and also to the Department of Mines.

Rule 60 of Article 20 provides that, "In mines where coal dust has accumulated to a dangerous extent, care shall be exercised to prevent said dust from floating in the atmosphere by sprinkling it with water, or otherwise, as far as practicable." This rule is very brief, but in my opinion you are given full power to demand that the dust shall not be allowed to float in the atmosphere of the mine.

If at any time you think a mine has become dangerous through the accumulation of coal dust or from any undue quantity being allowed to float in the atmosphere, you are hereby directed to notify the mine foreman, superintendent or manager of the fact, with a request that the matter be remedied at once. In case of refusal or delay on their part, you will promptly notify the Department of Mines, and two or more of the other inspectors will be sent to assist you in making a final investigation of the matter. A report of said investigation shall be sent to the mine foreman, superintendent or manager and also to the Department of Mines.

If you are not in possession of a hygrometer, the Department, on your request, will send you one suitable to carry with you into the mines. I hereby direct you to note the humidity of the air entering the several splits and also at the place where the air is measured in each split. This you will do in all your inspections of a mine, especially during July, August and September. If the condition of a mine is considered safe from explosions of coal dust during these months, you are directed to insist that the air in the winter or cold months be of the same humidity as in the summer months.

Without going into the matter further, I desire to say that this Department will expect and insist that you enforce the provisions of the mine law without fear or favor in an effort to reduce to a minimum the loss of life in the mines in your district.

Very truly yours,

JAMES E. RODERICK,  
*Chief of Department of Mines.*

Paragraph 3 of this letter, relating to the use of permissible explosives, aroused a great deal of feeling among the Mine Workers in and about Pittsburg. When the contents of this letter were made known to the operators, some of them in the river districts posted notices, August 18, to the following effect:

"To all Miners and Employees of this Mine:

You are notified that on and after August 25th the use of black powder as an explosive must be discontinued. After that date only such explosives will be permitted as have been recommended by the State Mine Inspectors of Pennsylvania. The use of black powder is discontinued by order of the State Mining Department.

(Signed.)

.....  
*Superintendent."*

The leaders of the Mine Workers in and about Pittsburg bitterly opposed the use of permissible explosives, advancing as an argument in support of their position that it would reduce the earnings of the miners, and declaring that the Department of Mines had no authority under the law to enforce their use.

Many of the employes of the river mines in and about Pittsburg went out on a strike. Many meetings were held at which the operators and miners endeavored to reach some satisfactory settlement of the question. The Chief of the Department of Mines attended one of the meetings, at which he stated emphatically that the use of permissible explosives had come to stay, and that all persons refusing to comply with the orders issued regarding their use would be prosecuted.

The following letter, relating to the subject, was received under date of September 1 from Mr. T. L. Lewis, President of the United Mine Workers of America:

"Hon. James E. Roderick, Chief of Department of Mines, Harrisburg, Pa.:

Dear Sir: The bearers of this communication, Michael Barry, Martin J. Flyzik and Edward McKay, are a committee appointed by me to wait on you and explain the necessity of your Department refraining from enforcing immediately the order that the miners must use 'permissible' explosives instead of black powder.

There is a special district convention to meet in Pittsburg, Pa., the coming week and this question will be brought to the attention of the delegates.

The International Organization desires to co-operate with the Mining Departments of the different states in providing any means that will add to the safety of the mine workers. We desire, however, to have time to investigate certain phases of the effect of the use of new explosives and we believe that your Department and yourself will not hesitate to act moderately in connection with this question.

The gentlemen appointed to come and see you will explain in detail any other matters you desire to know with reference to their mission.

With the hope that we may be able to find an intelligent solution of the controversy growing out of the orders issued by your Department, I remain,

Yours very truly,

T. L. LEWIS,  
President, U. M. W. of A."

The following answer was sent to Mr. Lewis's letter, under date of September 4:

"Mr. T. L. Lewis, President, United Mine Workers of America, Indianapolis, Indiana:

Dear Sir: Your letter of the first instant, introducing Michael Barry, Martin J. Flyzik and Edward McKay, has been received and contents have been carefully noted.

In reply to your suggestion that 'the Department of Mines refrain from enforcing immediately the order that the miners must use 'permissible' explosives instead of black powder,' I beg to say that I am still of the opinion that the continued use of black powder in gaseous dusty mines is a menace to the life of the miner and also to the property of the operator. Yet, in view of the contents of your letter and the statement of your committee, I think it my duty to comply with your request and will so notify the Inspectors at once.

Very truly yours,

JAMES E. RODERICK,  
Chief of Department of Mines."

On the same date, September 4, the following letter of instructions was sent to all the Bituminous Inspectors:

"Dear Sir: Your attention is called to a paragraph of a letter from this Department, dated July 12, 1909, which reads:

'In gaseous and dusty mines do not allow the use of any explosives except 'permissible' explosives, as determined by the Testing Station at Pittsburg.'

On account of the controversy among the United Mine Workers in the Pittsburg district, you are hereby instructed not to enforce compliance with said paragraph until further advised.

However, I desire to call your special attention to part of section one of article eleven of the bituminous mine law, which reads as follows:

\* \* \* 'In case, however, where, in the judgment of the mine inspector \* \* \* any mine or part of a mine is in such dangerous condition (from the use of black powder or from any other cause or practice) as to jeopardize life or health, he shall at once notify two mine inspectors of the other districts, whereupon they shall at once proceed to the mine \* \* \* and examine into the matter, and if \* \* \* they shall be agreed in the opinion that there is immediate danger, they shall instruct the superintendent of the mine in writing to remove such condition forthwith \* \* \*.'

I shall expect full compliance with this part of section one of article eleven.

Yours truly,

JAMES E. RODERICK,  
Chief of Department of Mines."

The companies interested then posted the following notice at each of their mines:

"To the Officers and Men of ..... Mine:

At the request of the National Miners' Organization the notice of August 18, advising that the use of black powder shall be discontinued on and after August 25, 1909, is hereby withdrawn. Such a request is based on the desire and intentions of proceedings to determine the result to the miners under the order of the State Mining Department regarding the use of substitute for black powder."

The immediate result of the posting of this notice was the return of the miners to work.

The above letter from the Department, dated September 4, is still in force.

## BULLETIN ISSUED BY UNITED STATES GEOLOGICAL SURVEY REGARDING PERMISSIBLE EXPLOSIVES

As a part of the investigation of mine explosions authorized by Congress in May, 1908, it was decided by the Secretary of the Interior that a careful examination should be made of the various explosives used in mining operations, with a view to determining the extent to which the use of such explosives might be responsible for the occurrence of these disasters.

The preliminary investigation showed the necessity of subjecting to rigid tests all explosives intended for use in mines where either gas or dry inflammable dust is present in quantity or under conditions which are indicative of danger.

With this in view, a letter was sent by the Director of the United States Geological Survey on January 9, 1909, to the manufacturers of explosives in the United States, setting forth the conditions under which these explosives would be examined and the nature of the tests to which they would be subjected.

Inasmuch as the conditions and tests described in this letter were subsequently followed in testing the explosives given in the list below, they are here reproduced, as follows:

(1) The manufacturer is to furnish 100 pounds of each explosive which he desires to have tested; he is to be responsible for the care, handling, and delivery of this material at the testing station on the United States arsenal grounds, Fortieth and Butler streets, Pittsburg, Pa., at the time the explosive is to be tested; and he is to have a representative present during the tests, who will be responsible for the handling of the packages containing the explosives until they are opened for testing.

(2) No one is to be present at or to participate in these tests except the necessary government officers at the testing station, their assistants, and the representative of the manufacturer of the explosives to be tested.

(3) The tests will be made in the order of the receipt of the applications for them, provided the necessary quantity of the explosive is delivered at the plant by the time assigned, of which due notice will be given by the Geological Survey.

(4) Preference will be given to the testing of explosives that are now being manufactured and that are in that sense already on the market. No test will be made of any new explosive which is not now being manufactured and marketed, until all explosives now on the market that may be offered for testing have been tested.

(5) A list of the explosives that pass certain requirements satisfactorily will be furnished to the State mine inspectors, and will be made public in such further manner as may be considered desirable.

### TEST REQUIREMENTS FOR EXPLOSIVES

The tests will be made by the engineers of the United States Explosives Testing Station at Pittsburg, Pa., in gas and dust gallery No. 1. The charge of explosive to be fired in tests 1, 2 and 3 shall be equal in disruptive power to one-half pound (227 grams) of 40 per cent. nitroglycerin dynamite in its original wrapper, of the following formula:

|                          |       |
|--------------------------|-------|
| Nitroglycerin, .....     | 40    |
| Nitrate of sodium, ..... | 44    |
| Wood pulp, .....         | 15    |
| Calcium carbonate, ..... | 1     |
|                          | <hr/> |
|                          | 100   |
|                          | <hr/> |

Each charge shall be fired with an electric fuse of sufficient power to completely detonate or explode the charge, as recommended by the manufacturer. The explosive must be in such condition that the chemical and physical tests do not show any unfavorable results. The explosives in which the charge used is less than 100 grams (0.22 pound) will be weighed in tinfoil without the original wrapper.

The dust used in tests 2, 3, and 4 will be of the same degree of fineness and taken from one mine.\*

\*With a view to obtaining a dust of uniform purity and inflammability.

Test 1.—Ten shots with the charge as described above, in its original wrapper, shall be fired, each with one pound of clay tamping, at a gallery temperature of 77°F., into a mixture of gas and air containing eight per cent. of methane and ethane. An explosive will pass this test if all ten shots fail to ignite the mixture.

Test 2.—Ten shots with charge as previously noted, in its original wrapper, shall be fired, each with one pound of clay tamping at a gallery temperature of 77°F., into a mixture of gas and air containing four per cent. of methane and ethane and twenty pounds of bituminous coal dust, eighteen pounds of which is to be placed on shelves laterally arranged along the first 20 feet of the gallery, and two pounds to be placed near the inlet of the mixing system in such a manner that all or part of it will be suspended in the first division of the gallery. An explosive will pass this test if all ten shots fail to ignite the mixture.

Test 3.—Ten shots with charge as previously noted, in its original wrapper, shall be fired, each with one pound of clay tamping at a gallery temperature of 77°F., into forty pounds of bituminous coal dust, twenty pounds of which is to be distributed uniformly on a horse placed in front of the cannon and twenty pounds placed on side shelves in sections 4, 5, and 6. An explosive will pass this test if all ten shots fail to ignite the mixture.

Test 4.—A limit charge will be determined within twenty-five grams by firing charges in their original wrappers, untamped, at a gallery temperature of 77°F., into a mixture of gas and air containing four per cent. of methane and ethane and twenty pounds of bituminous coal dust, to be arranged in the same manner as in test 2. This limit charge is to be repeated five times under the same conditions before being established.

Note.—At least two pounds of clay tamping will be used with slow-burning explosives.

In response to the above communication applications were received from manufacturers for the testing of numerous explosives. Of these explosives, the ones named in the following list have passed all the test requirements set forth, and will be termed permissible explosives.

Subject to the conditions named below, a permissible explosive is defined as an explosive that has passed gas and dust gallery tests Nos. 1, 2 and 3 as described above, and of which in test No. 4  $1\frac{1}{2}$  pounds (680 grams) of the explosive has been fired into the mixture there described without causing an ignition.

Provided:

1. That the explosive is in all respects similar to the sample submitted by the manufacturer for test.

2. That double-strength detonators are used of not less strength than 1 gram charge consisting by weight of 90 parts of mercury fulminate and 10 parts of potassium chlorate (or its equivalent), except for the explosive "Masurite M. L. F.," for which the detonator shall be of not less strength than  $1\frac{1}{2}$  grams charge.

3. That the explosive, if in a frozen condition, shall be thoroughly thawed in a safe and suitable manner before use.

4. That the amount used in practice does not exceed  $1\frac{1}{2}$  pounds (680 grams) properly tamped.

The above partial list includes the permissible explosives that have passed these tests prior to May 15, 1909. The announcement of the passing of like tests by other explosives will be made public immediately after the completion of the tests for such explosives.

A description of the method followed in making these and the many additional tests to which each explosive is subjected, together with the full data obtained in each case, will be published by the Survey at an early date.

#### NOTES AND SUGGESTIONS

It may be wise to point out in this connection certain differences between the permissible explosives as a class and the black powders now so generally used in coal mining, as follows:

(a) With equal quantities of each, the flame of the black powder is more than three times as long and has a duration three thousand to more than four thousand times that of one of the permissible explosives, also the rate of explosion is slower.

(b) The permissible explosives are one and one-fourth to one and three-fourths times as strong and are said, if properly used, to do twice the work of black powder in bringing down coal; hence only half the quantity need be used.

(c) With 1 pound of a permissible explosive or 2 pounds of black powder, the quantity of noxious gases given off from a shot averages approximately the same, the quantity from the black powder being less than from some of the permissible explosives and slightly greater than from others. The time elapsing after firing before the miner returns to the working face or fires another shot should not be less for permissible explosives than for black powder.

The use of permissible explosives should be considered as supplemental to and not as a substitute for other safety precautions in mines where gas or inflammable coal dust is present under conditions indicative of danger. As stated above, they should be used with strong detonators; and the charge used in practice should not exceed  $1\frac{1}{2}$  pounds, and in many cases need not exceed 1 pound.

Inasmuch as no explosive manufactured for use in mining is flameless, and as no such explosive is entirely safe under all the variable mining conditions, the use of the terms "flameless" and "safety" as applied to explosives is likely to be misunderstood, may endanger human life, and should be discouraged.

## SAFETY LAMPS

As one of the protective features of coal mining safety lamps have come into very general use in Pennsylvania in mines generating explosive gas. The table here-with shows the number and names of lamps in each district in the Bituminous region.

NUMBER AND NAMES OF SAFETY LAMPS IN USE

| Districts           | Wolf   | Clanny | Seipple | Schenk | Davy  | Davis | Ashworth—Hepplewhite—Gray | Total  |
|---------------------|--------|--------|---------|--------|-------|-------|---------------------------|--------|
| First, -----        | 2,942  | 35     | -----   | 200    | ----- | ----- | -----                     | 3,177  |
| Second, -----       | 1,546  | 1,260  | -----   | -----  | ----- | ----- | -----                     | 2,806  |

## GENERAL IMPROVEMENTS IN THE MINES

At the meeting before the Committee on Mines and Mining at the time the proposed Bituminous Mine Law was under consideration during the last session of the Legislature, the operators objected to certain sections of the bill directly affecting their own mines. Some of them objected to the amount of ventilation required, some to the provisions relating to the conducting of the air currents to the working faces by means of incombustible materials for cut-throughs, others to the provisions requiring additional shafts at or near the face of the workings for ventilation and escapeways in case of danger, and still others to the requirements regarding the watering of the dust. In fact, each operator objected to most everything that in his opinion interfered with his own mines.

In spite of this attitude to the bill, the operators have during 1909 sunk at or near the face of the workings 25 shafts, ranging from 100 to 350 feet in depth, to increase the ventilation and also afford an

\*None in use.

escapeway in case of danger. There were also erected of incombustible material 390 overcasts to do away with doors on entries, and to conduct a sufficient quantity of air to faces of entries 4,494 cut-throughs between intake and return airways were permanently closed with incombustible material. About half of these were old cut-throughs that had replaced wooden stoppings. To increase the quantity of air 20 ventilating fans, ranging in diameter from 10 to 26 feet, were erected in the larger mines. In the small non-gaseous mines 23 fans were erected of smaller diameter. To increase the volume of air at the face of the workings 10 old mines enlarged their intake airways to such a size that the air is now of sufficient volume to keep the mines safe at all times, when properly guarded.

Although no permissible explosives have as yet been used in the Third and Eighteenth Districts, they are used to a considerable extent in the mines of the Fifth, Ninth, Eleventh, Fifteenth and Sixteenth Districts. In the other districts they are used in but very few mines. The total number of mines using them is 312, and it may be confidently expected that they will ultimately be adopted in all mines generating gas and, in fact, in all the bituminous mines of the State.

Some of the operators also objected to the four and five entry systems as provided in the proposed law, and they vigorously protested against being compelled to turn rooms only on one side when two entries were driven instead of having rooms turned from each entry, as is being done in many mines. In spite of the strenuous objections to the adoption of the five-main entry system, it may be stated here that in many of the extensive mines there are at the present time five, six and even seven main entries. Herewith are given descriptions of the four and five entry systems:

#### FOUR ENTRY SYSTEM

The main hoisting shaft is the intake. The main headings are driven on the butt and are four in number, the two inside ones being intake air courses, one of which is a haulage road and the other a travelling way. The outside headings are return air courses, both going directly to the bottom of the air shaft, where they unite.

Off of these main headings, at stated intervals, are turned in series of three, to the right and the left, main face headings, two of which are intake air courses and one a return. In one of the intakes the hauling is done. From the face headings, room headings or butts are driven in pairs, one of them being used for a return, the other for driving rooms off.

No doors are used in the mine, an overcast being built at each butt heading. All hauling roads are intake airways; the air is not interfered with by moving trips, and the rooms are driven on only one side of the butt headings, so that there will be no necessity for having men working in an air current that has passed over any gob or old workings, and there is an independent air course for a manway, on which no hauling is done.

#### FIVE ENTRY SYSTEM

The main hoisting shaft is the intake. The main headings on the butt of the coal are five in number, the three inside headings are intake air courses and are used, one for hauling loads, one for hauling empties and the third for a travelling way; the outside headings are return air courses, both going to the bottom of the air shaft where the air is split.

Off of these main headings at stated intervals are turned to the right and left main face headings, in series of three or four headings, according to the intention of developing a section on one side or both sides. Where three headings are driven, the butts are turned off on one side only in pairs, the rooms being driven from one of these butts to the raise; the other being simply an air course. Two of the main face headings are intakes, one of which is a hauling road, the other a travelling way. The third face heading is a return air course.

~ SKETCH ~ SHOWING ~  
METHOD OF VENTILATING  
AND DRIVING ROOMS.  
FIVE ENTRY SYSTEM  
SCALE 1" = 400' ~

~ SKETCH ~ SHOWING ~  
METHOD OF VENTILATING  
AND DRIVING ROOMS.  
FIVE ENTRY SYSTEM  
SCALE 1" = 400' ~

Where a section is developed on both sides of the face heading, four face headings are driven, the inside headings being used for haulage and as intakes, the outside for return air courses.

No doors are used in the mine, an overcast being built at each butt heading. All haulage roads are intake airways; the air is not interfered with by moving trips, and the rooms are driven on only one side of the butt headings, so that there will be no necessity for having men working in an air current that has passed over any gob or old working.

These sketches, while not perfect, perhaps, are submitted to the intelligent superintendents and managers. They all know the great importance of doing away with doors, especially in gaseous mines, where a door left open may cause a disastrous explosion, even in a well conducted mine.

It may be said in this connection that the mines of this State have been vastly improved since the disasters of 1907. Operators, managers and superintendents are now anxious to confer with the Inspectors and the Department on all matters pertaining to the safety of the employes and the protection of property. With an up-to-date mine law this State can be made to produce coal with a minimum loss of human life.

---

## WORK OF THE MINE INSPECTORS

The work of the Inspectors has been very satisfactory during the year. They have made every effort to secure strict compliance with the mining laws, and the result has been such as to commend their work to the Chief of the Department.

During the year they spent 2,985 days inspecting mines; 12 days inspecting machinery and plants; 306 days investigating accidents; 41 days attending inquests; 1,153 days at office work; 9 days inspecting maps and plans; 550 days in consultation on mining matters; 86 days in consultation on legal matters; 369 days traveling on duty; 116 days on sick list; 93 days legal holidays; 113 days attending court; 14 days attending funerals; 6 days at mine fires; 35 days on vacation; 100 days on Mine Inspectors Examining Boards; 277 days on Mine Foremen Examining Boards; 7 days absent on account of deaths in families; 70 days sickness in families; 3 days on private business; 20 days investigating the Orenda explosion; a total of 6,369 days, or about 313 days a year for each Inspector.

---

## CHILD LABOR

So much concern is manifested in the welfare of the children who have entered the ranks of the bread-winners, and so much is said on the subject through the press and on the platform, that any change in the conditions affecting this large and constantly increasing class of citizens is bound to possess a certain amount of interest. The question of child labor must be approached from two sides in order to arrive at a fair conclusion regarding it. On the one side stands the parent, who desires that his child shall aid in the support

of the family household, and insists upon placing him at work regardless, sometimes, of the privileges and opportunities that are his inherent right. On the other side stands the leader in the cause of child protection, vigilant, aggressive, but sometimes over-zealous and impractical. To steer a course safely between these opposing forces of self-interest and philanthropic interest is a task that requires some diplomacy and not a little tact. In our treatment of the subject we have always endeavored to keep this question of opposing forces in plain view. However, as the years go by, the pathway of the youthful worker is being gradually freed from the hardships of long hours, unsanitary conditions and inadequate wages, and to-day he works under conditions of safety, convenience and comfort undreamed of a generation ago.

This Department has direct interest only in the youthful workers in and about the coal mines of the State, and it is a matter of gratification to be able to say that the conditions surrounding this class of workers have greatly improved in the last decade. In addition to the more intelligent and efficient operation of the mines and the consequent betterment in the physical conditions, there has been a gradual decrease in the hours of labor and an increase in the amount of wages paid. The greatest gain, however, has been brought about by the wise and humane legislation regulating the ages of the workers. Years ago little children not more than eight or nine years of age were allowed, and in many cases obliged, to work about the mines, but owing to the enlightened public sentiment that has always opposed the employment of children of tender years in industrial work, and to the more thoughtful and sensible attitude of the operators, the age limit has from year to year been increased until to-day no child under fourteen years of age can be employed at any work whatever about the mines, and as a rule few children under sixteen years of age are employed inside the mines.

The Act of the General Assembly passed in 1909 fixes the age limit of the boys in and about the mines at fourteen years, and requires of them a certificate from an accredited school official showing them to be familiar enough with the English language to read intelligently portions of the mine law and to write legibly simple sentences.

The Department, while always interested in the welfare of the children employes, has never been required by law to exercise any supervision over them. This latest enactment, however, provides as follows:

"It shall be the duty of the Chief of the Department of Mines to carry out the provisions of this act, and prosecutions for violations thereof shall be instituted by the Chief of the Department of Mines."

The Inspectors throughout the State have, therefore, been instructed to see that the provisions of the law are strictly complied with and that violations thereof are dealt with in a most summary manner. All the superintendents in both the Anthracite and Bituminous regions were written to as follows:

"Dear Sir: I enclose herewith two copies of an act regulating the employment of minors in the coal mines of Pennsylvania after January 1, 1910.

You are requested to see that the act is complied with. The Inspector on his tour will expect and demand to see that you have a certificate for each employe inside and outside of the mines, as required by this act. It is the opinion of the Department of Mines that each employe between the ages of fourteen and sixteen years should file a certificate, in accordance with this act, on or before January 1, 1910.

Your attention is called to Section VII of the act, which reads as follows:

'Section VII. Any person or persons violating any of the provisions of this act shall be deemed guilty of a misdemeanor, and, upon conviction, shall be punished, for a first offense, by a fine of not less than ten dollars or more than twenty-five dollars, or ten days imprisonment in the county jail, or either or both, at the discretion of the court; and, for a second offense, shall be punished by a fine of not more than fifty dollars, and ninety days imprisonment in a county jail, or either or both, at the discretion of the court.

It shall be the duty of the *Chief of the Department of Mines* to carry out the provisions of this act, and prosecutions for violations thereof shall be instituted by the *Chief of the Department of Mines*.'

Upon report from the Inspector of any violation of this act, the Chief of the Department of Mines will instruct the Inspector to prosecute the person guilty of the offense.

Kindly acknowledge receipt of this letter and copies of the law."

For many years we have advocated the adoption of an age limit similar to that incorporated in the Act of 1909, and as we think a sensible solution has been reached by this Act, we shall make every effort to see that its provisions are complied with.

Our interpretation of the Act of 1909 was that it repealed all previous legislation on the subject of child labor in and about the coal mines, both anthracite and bituminous, and made the age for both inside and outside work fourteen years. The officials of the Pennsylvania Child Labor Association, who were active in the passage of the measure, took a different view and insisted that the Act of 1905, making the age limit for inside work sixteen years, was still in force. The dispute in the matter revolved around the definition of the word "colliery." The Act of 1909 reads as follows:

"No minor under the age of fourteen years shall be employed, permitted, or suffered to work in, about or for any \* \* anthracite colliery or breaker."

The Department contended that the word "colliery" covers every operation and work, both under and above ground, used or to be used for the purpose of mining and preparing coal. This definition is taken from Article XVIII of the Act of June 2, 1891. In further support of our position on this question we give the definition of the word "colliery" as found in the Century Dictionary, "A place where coal is dug; a coal mine or pit with the requisite apparatus for working it;" also as found in Webster's Dictionary, "A place where coal is dug; a coal mine and the buildings, and so forth, belonging to it." In addition to these authorities, it may be stated that among the anthracite operators the term "colliery" is a comprehensive term, including all the workings of the operation.

The Child Labor Association in its contention held to the opinion that the word "colliery" was used in contra-distinction to the word "mine," and, therefore, practically covered the outside workings only.

Upon reference of the subject to the Attorney General of the State, the Department received from him an opinion upholding its interpretation of the Act. After reciting parts of the Acts of 1905 and 1909, and citing several legal cases in which the term "colliery" is defined, he gives his opinion as follows:

"This Department is therefore reluctantly forced to the opinion, and I so advise you, that the act of 1909 repeals in toto the act of 1905, notwithstanding the unfortunate effect of reducing the age at which minors may work in an anthracite coal mine from sixteen to fourteen years."

The correspondence appended may be of interest as indicating the position assumed by the Department and what it is trying to do to make effective the present just and beneficent legislation on the subject.

On the 30th of November copies of the new Act were sent to all the Inspectors, and they were instructed as follows:

"Dear Sir: On your inspection trips after January 1, 1910, you are requested to see that all companies in your district have complied with the provisions of this act; and you are hereby authorized to prosecute according to law any foreman or any other person violating its provisions."

On the 27th of December further instructions were sent to all the Inspectors as follows:

"Dear Sir: Your attention is again called to the act, entitled 'An act to provide for the health and safety of minors in bituminous coal mines and anthracite collieries or breakers,' which will go into effect January 1, 1910.

By the provisions of this act, the employment age of minors inside and outside the mines is made fourteen years.

'Section 5. The employment certificate provided by this act for the use of a minor between fourteen and sixteen years of age shall be in the following form:—

This certifies that (name and residence of minor) is aged ..... years ..... months ..... days; whose complexion is ....., hair is ....., and eyes are .....; is able to read and write the English language intelligently. \* \* \* \*'

'Section 7. Any person or persons violating any of the provisions of this act shall be deemed guilty of a misdemeanor. \* \* \* \*'

It shall be the duty of the Chief of the Department of Mines to carry out the provisions of this act, and prosecutions for violations thereof shall be instituted by the Chief of the Department of Mines.'

Inasmuch as the Chief of the Department of Mines is the only person authorized to institute prosecutions for violations of this act, you are hereby directed as follows:

While on your tours of inspection inside and outside the mines, you will interview any employee who, in your opinion, is between the ages of fourteen and sixteen years. Give the person a copy of the Mine Law and see if he can read intelligently; then give him your note book and ask him to write therein what you may dictate to him, giving a few plain, every-day sentences. If he fails in either the reading or the writing of the English language intelligently, you will proceed to prosecute the person who gave him a certificate, as provided for in section seven. The Chief of the Department of Mines will hold you, individually, responsible for any violations of this act in your inspection district.

Very truly yours,

JAMES E. RODERICK,  
*Chief of Department of Mines."*

Information having been received from one of the Inspectors in the Anthracite region that some of the children in the mines in his district were in possession of age certificates that had been issued to their parents by squires or justices of the peace, and the Inspector having asked for instructions regarding their recognition, he was advised as follows:

"Do not accept any such certificates as you refer to as evidence of boys' ages. This is a way of evading the provisions of the present law that was resorted to in the past to evade the provisions of the old law. It has been conclusively shown that the certificates of parents are valueless, as they (the parents) frequently state that a boy of twelve is sixteen years of age, if that is necessary to obtain employment.

You will accept no certificates from boys of uncertain age, except baptismal certificates. If they cannot be had in this country, you can allow sixty days' time in which to procure them.

Prosecute any foreman who does not have the proper certificates in his possession or who does not promise to procure them, as provided for by the act of 1909. You will have the foremen suspend all boys that have not deposited certificates as demanded by law."

The Act of 1909 reads as follows:

## AN ACT

To provide for the health and safety of minors in bituminous coal mines and anthracite collieries or breakers, by regulating the ages at which said minors may be employed, their hours of employment, and to prescribe rules for the obtaining of employment certificates, and providing penalties for violation of the provisions thereof.

Section 1. Be it enacted, &c., That from and after the passage of this act, no minor under the age of fourteen years shall be employed, permitted, or suffered to work, in, about, or for any bituminous coal-mine or anthracite colliery or breaker.

Section 2. That no minor under the age of sixteen years shall be employed, permitted, or suffered to work, in or about or for any establishment or industry named in section one of this act, for a longer period than ten hours in any one day, except when a different apportionment of the hours of labor is made for the sole purpose of making a shorter workday for one day in the week; nor shall a less period than forty-five minutes be allowed for the midday meal; and in no case shall the hours of labor exceed fifty-eight in any one week. No minor under the age of sixteen years shall be employed or permitted to work between the hours of nine post meridian and six ante-meridian.

Section 3. That no minor under the age of sixteen years shall be employed in or about or for any establishment or industry named in section one of this act, unless the employer of said minor procures and keeps on file and accessible to the mine inspector, the employment certificate as hereinafter provided, issued to said minor, and keeps two complete lists of all minors under the age of sixteen years employed, in or for his or her establishment; one of said lists to be kept on file in the office of the employer, and one to be conspicuously posted in each of the several departments in or for which minors are employed. Said employment certificate, when issued, shall be the property of the minor named therein, who shall be entitled to a surrender of said certificate to him or her by the employer whenever said minor shall leave the service of any employer holding said certificate.

Section 4. The employment certificates required by the provisions of this act shall be issued as follows:—

In school districts having a district superintendent or supervising principal, by such superintendent or supervising principal; in school districts having no superintendent or supervising principal, but having one or more principals of schools, by such principals, each principal to issue the certificate to minors residing within the territory belonging to the school over which he has supervision; in school districts, or parts of districts, having no district superintendent or principal, by the secretary of the board of school directors for that district: Provided, That any district superintendent, supervising principal of schools, or secretary of the board of school directors, hereby directed to issue such certificates, may authorize and deputize, in writing, such persons as they may see proper, to act in their place and stead for the purpose of issuing such certificates. Any of the hereinbefore mentioned officials, authorized to issue employment certificates, before doing so shall demand, and if possible obtain, a birth certificate, or baptismal certificate, or passport, or any other

official or religious record of the minor's age, or duly attested transcript thereof; or, in the event that none of these is obtainable, may accept, in lieu thereof, the record age as given on the register of a school the minor has attended; or, in the absence of such record, may accept the affidavit of the minor's parent, guardian, or other person, which affidavit he is empowered to administer: Provided, That the powers and duties conferred by this section on the superintendents, supervising principals, principal, or secretary of a board of school directors, be and the same are conferred upon superintendents, supervising principals, principal, teachers, or secretaries of any private academy, parochial or denominational schools, in all cases where the applicant for an employment certificate is, or recently has been, an attendant pupil in a private academy, parochial or denominational school, and is not a pupil in a public school: And provided further, That whenever in any school district an employment certificate is issued by any persons other than the public school official hereinbefore directed to issue such certificates in said district, said persons shall, on or before the third day of each month, file with the aforementioned public school official, in said district, true copies of all employment certificates so issued.

Section 5. The employment certificate provided by this act for the use of a minor between fourteen and sixteen years of age shall be in the following form:—

This certifies that (name and residence of minor) is aged ..... years ..... months ..... days; whose complexion is ..... hair is ....., and eyes are .....; is able to read and write the English language intelligently, and may be employed at labor in any bituminous coal-mine or anthracite colliery or breaker.

This certificate is a legal warrant for the employment of the minor hereon, in any of the above-named establishments and industries, under the provisions of an act approved ..... one thousand nine hundred and nine.

(Signature of person who issued certificate, official title and official address.)

(Signature of minor to whom issued.) ..... (Date.)

Section 6. The blank employment certificates shall be prepared by the Superintendent of Public Instruction, in accordance with the form prescribed in this act; the same to be printed in accordance with the laws regulating printing and binding, under the supervision of the Superintendent of Public Printing and Binding. The Superintendent of Public Instruction shall also supply the aforesaid certificates to all persons authorized to issue the same.

Section 7. Any person or persons violating any of the provisions of this act shall be deemed guilty of a misdemeanor, and, upon conviction, shall be punished, for a first offense, by a fine of not less than ten dollars or more than twenty-five dollars, or ten days imprisonment in the county jail, or either or both, at the discretion of the court; and, for a second offense, shall be punished by a fine of not more than fifty dollars, and ninety days imprisonment in a county jail, or either or both, at the discretion of the court.

It shall be the duty of the Chief of the Department of Mines to carry out the provisions of this act, and prosecutions for violations thereof shall be instituted by the Chief of the Department of Mines.

Section 8. All fines imposed and collected for any violation of this act shall be forwarded to the Chief of the Department of Mines, who shall pay the same into the office of the State Treasurer, for the use of the Commonwealth.

Section 9. This act shall be in force and effect on and after January first, one thousand nine hundred and ten.

Section 10. All acts or parts of acts inconsistent with any of the provisions of this act, be and the same are hereby repealed.

Approved—The 1st day of May, A. D. 1909.

---

## PENSIONS FOR WIDOWS AND ORPHANS

The question of rendering financial assistance to widows and orphans who are deprived of the support of husbands and fathers by fatal accidents in our coal mines was dealt with pretty thoroughly in the report of this Department for 1907. Renewed attention has recently been called to the question by the disastrous explosions of the past year, and in a speech delivered a short time ago Mr. John Mitchell gave his views as follows:

"There was a time when criminal law was a matter of private settlement, when a man could atone for the murder of a fellowman by paying a sum of money. Conditions have changed since then, but under the present laws of liability and negligence injured workmen or their heirs are compelled to prove affirmatively that the accident was not due to the workingman's negligence.

In the matter of cost, the present system governing accidents is wasteful alike to the employer and to the employee. In Illinois there are 70,841 coal miners, earning an average annual wage of \$500, or a total of \$35,420,500. In 1908 alone there were 183 fatal accidents. Had the employers paid the dependents of the killed workmen an amount equal to three years' wages, as under the English law, it would have cost them \$274,500. There were also 819 non-fatal accidents. Had these men been paid half wages at \$6 a week during the period of their disability, as in England, it would have cost \$24,570.

Instead of this sum, \$299,070, however, it cost the employers under the present liability system \$354,505, owing to the expenses of insuring the workmen and litigation over damages. We want compensation for injuries, instead of a useless expenditure of money in liability insurance and litigation."

If Mr. Mitchell's figures are correct, it is evident that it would be greatly to the advantage of the American operator to secure some philanthropic legislation like the English law. The instance he cites in the case of the Illinois accident is a convincing argument in favor of a change in our methods of rendering assistance to the sufferers from mine accidents. The employers in Illinois paid finally a sum said to be \$354,505 during the year 1908, while under the English system the amount would have been but \$299,070 and the results obtained would have been infinitely more satisfactory.

The 70,841 miners in Illinois earn an average annual wage of \$500, or a total of \$35,420,500. If out of this vast sum they were to contribute \$299,070 as a protection to widows and a weekly stipend to the injured, it would take only \$4.23 of their individual earnings or less than 36 cents a month.

Or, if they were to donate one per cent. of their annual earnings, the sum would be \$354,205, and if the operators were to add an equal amount there would be a fund of \$708,410, which would give each widow \$500 a year for six years, and each injured person \$9 a week

during the term of his disability. If the total amount of \$708,410 were paid by the operators alone, it would mean only one and four-tenths cents per ton additional cost on a production of 50,000,000.

If a law cannot be passed to tax the production of coal for the purpose of affording relief to the sufferers from mine accidents, it might be well to have a law compelling the operators to pay the dependent persons, as is done in England.

This question is a most vital one, and one that appeals very strongly to all persons who are familiar with the conditions under which the miner pursues his vocation.

In the report of this Department for the year 1907 a carefully worked-out plan was submitted by which a tax of three-fourths of a cent a ton on bituminous coal and one and one-half cents a ton on anthracite coal would provide a fund sufficient to cover the needs of the widows and orphans and also care for the injured. A portion of the article is reproduced herewith, owing to the unusual attention that has lately been directed to this subject:

"In the Anthracite region, with an annual taxable production of 62,000,000 tons, yielding a tax of one and one-half cents a ton, the fund would be \$930,000. The loss of life in the Anthracite mines averages about 573 a year, leaving about 322 widows and 770 orphans. In the Bituminous region from which an annual taxable production of at least 100,000,000 tons may be expected during the next hundred years, the fund at three-quarters of a cent a ton would be about \$750,000. The loss of life in the Bituminous mines averages about 475 a year, leaving about 252 widows and 546 orphans. Each widow should receive \$100 to defray the funeral expenses and a weekly benefit of \$3 during widowhood, and each child under fourteen years of age should receive a weekly benefit of \$2.

To care for persons injured in the mines, a portion of the fund in each region, approximately \$100,000, could be distributed annually. During disablement each person should receive an amount equal to one-half his daily or weekly earnings, the benefit not to become operative until one week from the date of injury and to continue until he is able to resume work; but in no case should the benefit continue for more than one year. The annual expense entailed by the plan herewith proposed is shown in the following table."

## REVIEW OF RECENT EXPLOSIONS OF GAS AND DUST

The coal mining industry of Pennsylvania has in recent years been marked by the most disastrous explosions in its history; 1902, 1904, 1907 and 1908 all have unenviable records for catastrophes of this kind.

In 1902 an explosion of gas occurred at the Rolling Mill mine by which 112 persons lost their lives. This accident came as a shock to the mining officials, inspectors and the Department of Mines, as the mine was considered to be a safe one and was worked almost entirely with open lights. It, however, was evidently generating a dangerous quantity of gas at the time, and the explosion was due to the fact that the employes were using open lights in disobedience of the rules of the mine, requiring that where gas is found to exist in dangerous quantities locked safety lamps only shall be used. The inquest disclosed the fact that open lights were used against positive instructions.

In 1904 another most disastrous explosion occurred at the Harwick mine by which 177 lives were lost. This explosion was also a surprise to the officials, the Department and the public, as the inspector who had inspected the mine several months prior to the accident had reported it as a safe mine with only a trace of gas in a few of the entries. The testimony at the inquest, however, revealed a condition of affairs in the mine that could not have existed had the officials been competent and careful.

In 1907 there occurred two great disasters, one at the Naomi mine and one at the Darr mine, by which 34 and 239 persons, respectively, were killed. These mines were deemed comparatively safe mines by the mine officials and the inspectors, and were worked with open lights, except in a few entries where gas was being generated. In these entries locked safety lamps were used. The inspectors had never reported to the Department the existence of gas in these mines to any dangerous extent, and it is undoubtedly a fact that there was not enough explosive gas in either mine to cause more than a local explosion, which, while it might have killed or injured those in the immediate vicinity, would not have extended farther. The initial explosion of gas, however, in each instance, was carried by the coal dust in the air and on the roof and sides to every nook and corner of the mine, destroying the lives of all the employes.

In 1908 an explosion of gas and dust occurred at the Marianna mine by which 154 persons lost their lives. This mine had been pronounced safe by the inspector the day before and also on the day of the accident, and he had gone out of the mine only about a half hour before the explosion took place. The mine was worked exclusively with open lights, except in the Blanche entries where a small quantity of gas was being generated. Only one person escaped from this explosion and he was blown to a point near the foot of the shaft where the air was not poisonous enough to kill him. This was undoubtedly a dust explosion of the most violent type, and owing to the efficiency of the ventilation it was carried to all the entries in the mine.

There are many mines in the State in a dangerous condition owing to the accumulation of coal dust therein, the dust held in suspension in the air and the presence of small quantities of gas near to and at the faces of rooms and entries. In some mines there is probably one and a half or two per cent. of gas at or near the face of the workings, which the fire boss with the ordinary safety lamp cannot detect, and yet this gas is sufficient, in the event of a blown-out shot with dynamite or black powder or possibly with a permissible explosive, in the presence of coal dust, to bring disaster to all the persons in the mine. While this is to some extent an alarming state of affairs, the inspector is unfortunately unable to remedy matters by enforcing compliance with the ordinary rules of safety, because the law does not provide for such conditions.

No explosions of gas or dust occurred in any of the gaseous and dusty mines during 1909, a fact due no doubt to the careful supervision of the Inspectors, the unusual precautions taken by the managers, superintendents and foremen and the intelligent use of permissible explosives. With less skillful and careful supervision we might have been called upon to chronicle a repetition of the distressing disasters of previous years. It is a matter of regret to state in this connection that the leaders of the workingmen in and about Pittsburg are hardly deserving of commendation for the reason that they have at all times objected to the use of permissible explosives, giving as a cause for their attitude that permissible explosives reduce the wages of the miners about ten per cent. by breaking the coal. While this is a controversy that does not concern the Department of Mines, the Department is of the opinion that permissible explosives should be used and that the fight regarding wages should not enter into the question when the safety of the workers is concerned.

The record of the so-called safe mines is not so satisfactory. On January 25, 5 persons lost their lives by an explosion of gas and dust in Orenda No. 2 mine of the Merchants Coal Company, in Somerset county. On April 9, 7 persons were killed in Eureka No. 37 mine of the Berwind-White Coal Mining Company, near Windber, Cambria county, by an overcharge of dynamite that ignited the dust. Some of the men killed were 200 feet away from the holes blasted. It may be said here that not a particle of explosive gas was ever detected in this mine before or after the explosion, and all the workmen in rooms and entries used naked lights. On June 23, 21 persons lost their lives by an explosion of dust in Lackawanna No. 4 mine of the Lackawanna Coal and Coke Company, at Wehrum, Indiana county. No gas had been detected in this mine for about eight years and all the people worked with open lights. This, again, was undoubtedly a dust explosion pure and simple. The next explosion in a non-gaseous mine occurred Sunday, October 31, in Franklin No. 2 mine of the Cambria Steel Company, in Cambria county, whereby 16 persons lost their lives. Every person in this mine worked with an open light. The accident was caused by a blown-out shot in an entry where the vein was only one foot in height and the coal was blasted from the solid. This method of mining is always condemned, but it seems that it was practiced with or without the knowledge of the mine foreman and superintendent. This was another explosion of

coal dust without any gas. More extended accounts of these explosions follow this article.

It may with propriety be stated that some of the 49 lives lost in the explosions just referred to might have been spared had the Legislature enacted into a law the Bituminous Mine Bill submitted to it during the session of 1909. The more stringent rules and regulations provided therein for the government of the mines would, no doubt, have resulted in the enforcement of greater discipline and more care on the part of both officials and employes, and the liability to accident would therefore have been greatly reduced.

The accidents in the non-gaseous mines of Central Pennsylvania came very unexpectedly, yet they prove the contention of the Department that coal dust is a menace to life in nearly all the coal mines of this State. Tests should be and will be made of the dust from all mines, and whenever the dust can be exploded by black powder or dynamite the operators will be compelled to use the permissible explosives, as determined upon at the Testing Station in Pittsburgh.

For several years the Department of Mines through the Inspectors, by personal interviews and in the annual reports, has endeavored to bring to the attention of the superintendents, foremen and miners the dangerous properties of coal dust in the mines. Many excellent articles on this subject by able scientific and practical writers appeared during 1908 and 1909 in "Mines and Minerals," Scranton, Pa., in "Coal and Coke Operator," Pittsburgh, Pa., and in other publications, and should have convinced every superintendent, foreman and miner that coal dust is really the most dangerous element to be found or encountered in modern coal mines. In addition to this, the United States Government at its Testing Station in Pittsburgh has often given practical demonstrations showing that coal dust even in the absence of explosive gas is a dangerous element to contend with, but is much more dangerous when a small percentage of explosive gas is mixed with the dust in the air currents. These practical demonstrations should have convinced the "doubting Thomases" of Pittsburgh and elsewhere who are opposing the use of the so-called safe explosives in gaseous mines.

To make the mining of coal practically safe for the miner and the operator from such disastrous explosions as have occurred during the past few years, simple rules should be followed, namely: Ample ventilation should be provided for all parts of a mine so as to keep it free from any accumulation of explosive gas at or near the working places and all other places; the dust should be cared for by wetting it or by some other method, such as the use of calcium chloride or stone dust, that will destroy or make harmless its destructive properties. Neither calcium chloride nor stone dust will prevent a blown-out shot from igniting the coal dust in suspension in the air, but either of them might possibly prevent the destructive force of the explosion in entries, the first by dampening the dust, and the second by mixing with the coal dust and thereby reducing its destructive properties. All accumulations of dust should be removed as often as necessary or at least once a week; the sides, roof and bottom of each working place should be thoroughly wetted for about one hundred feet from the hole or holes to be fired; the exclusive use of permissible explosives as determined by the Testing

Station at Pittsburg should be enforced; the holes should be properly placed and charged with only sufficient explosives to bring down the coal, and tamped with incombustible material; the coal should be properly undermined; that is, it should be undermined a little deeper than the holes are laid; and in dangerous mines the coal should be sheared in addition to undermining before it is blasted. If these precautions are taken, and intelligent workmen who understand the English language well enough to read the rules of the mine are employed, the dangers from explosions of gas and dust in the mines of this State would practically be eliminated. In gaseous mines where locked safety lamps are used, in addition to the preceding precautions, shot firers should be employed to charge, tamp and fire all holes with electric battery when the employes are out of the mine, and they should have the power to refuse to charge any hole not properly placed.

This, briefly, is the only way to safeguard life and property in coal mines from such catastrophes as have occurred in the past.

---

### THE EXPLOSION AT ORENDA NO. 2 MINE

On the 25th of January 5 persons lost their lives in an explosion at the Orenda No. 2 mine of the Merchants Coal Company.

Immediately upon receipt of information regarding the explosion, which reached the Chief of the Department of Mines while in attendance at a meeting of the Mine Law Commission in Pittsburg, instructions were given to Inspectors D. R. Blower, T. D. Williams, Joseph Williams and Nicholas Evans to accompany the Inspector of the district, T. S. Lowther, to the mine to assist in removing the dead and injured, and in making a thorough inspection to ascertain the cause and the initial point of the explosion.

The Inspectors went at once to the mine and after making an inspection as directed submitted their report to the Department, under date of February 17. On the same date they sent a letter to the General Superintendent of the Merchants Coal Company, at Pittsburg. The report of the Inspectors and the letter to the General Superintendent are printed herewith; also a map of the portion of the mine affected by the explosion.

---

### REPORT OF INSPECTORS

“Somerset, Pa., February 17, 1909.

Hon. James E. Roderick,  
Chief of Department of Mines,  
Harrisburg, Pa.

Dear Sir:

In compliance with your orders, we, the undersigned Mine Inspectors, on being informed that an explosion had taken place at

MAP NO. 4.  
 LACKAWANNA COAL & COKE CO.  
 WEHRUM, INDIANA CO. IND.  
 SCALE 1" = 400'

Orenda No. 2 mine of the Merchants Coal Company in Somerset county, at about 8.00 P. M., on January 25, 1909, proceeded at once to the scene of the accident, arriving on the morning of January 26th. We rendered such assistance and made such suggestions as we deemed necessary for the protection of those engaged in exploring the mine and locating and removing the bodies. We found the Mine Inspector of the district on the ground directing the temporary restoration of the ventilation. This was successfully accomplished and the bodies located and recovered by 6.30 P. M. of the same day. This mine is located on the Boswell Branch of the Baltimore and Ohio Railroad.

The opening is a slope penetrating the C Prime seam and extending a distance of 5,000 feet or more at an average gradient of about 15 per cent dip. Levels are driven to right and left off the slope and productive headings are driven in pairs to the rise and dip off these levels. Rooms are driven to the right and left off these headings and the pillars are drawn when the rooms are driven to their destination, or as soon thereafter as practicable.

Hauling is done by animal power in the rooms, and by stationary electric hoists and locomotives on cross headings and levels. The coal is delivered to the main slope at different points and is hauled to the surface by rope haulage.

Ventilation is produced by a 16 x 6½ foot blowing fan, driven by an electric motor at a speed of 126 revolutions, producing 119,370 cubic feet of air per minute and developing a pressure equal to three inches of water gauge. This volume is divided into five different splits by means of overcasts at different points, and is guided and directed to the face of the workings by a system of doors.

On being notified by the management of the Merchants Coal Company that the ventilation was sufficiently restored, we again returned to the mine February 9th for the purpose of determining the cause and locating the initial point of the explosion. On entering the mine we proceeded to No. 7 left level and there found evidence of the force of the explosion having come up from No. 8 left level. We then proceeded to No. 8 left level and in a place known to us as No. 3 south off No. 8 left level (where two bodies had been found) we found evidence that much heat had been produced there at the time of the explosion.

After examining the workings of No. 8 left level (except the faces of the dip headings which were filled with water) we proceeded to No. 8 right level, as the main slopes were filled with water. On going into No. 8 right level we found Nos. 1 and 2 dip headings off No. 8 right level filled with water also; hence we were unable to examine these places. We found at the bottom of Nos. 1 and 2 dip headings off No. 7 right level, where they intersect with No. 8 left level, evidence of the force having come down these headings and having divided at this point, one part going across the main slope into No. 8 left level. We followed the evidences of the other force going into No. 8 right level and up the No. 3 dip off No. 7 right level where the evidence of the force diminished. We then examined the faces of No. 8 right level and found very little evidence of force having been exerted there. We then returned to the bottom of Nos. 1 and 2 dip headings off No. 7 right level, where we found strong evidence of the force having returned up these headings, showing

that the greatest force had been exerted at the intersection of No. 1 dip and No. 7 right level.

Upon re-examining these headings we found explosive gas on falls in pillar workings, also in a cavity in the roof on No. 1 dip heading between Nos. 3 and 5 rooms. This, connected with the facts that gas had been ignited near this same point at three different times between the hours of 5 and 6 P. M. on the day of the explosion; that the bodies of the two officials, Morris and Cole, were not found in the return current from No. 1 dip off No. 7 right level; that no other persons were known to have been in this vicinity at the time of the explosion and that the electric current had been cut off the entire mine at 6.30 P. M., led us to agree in the opinion that the cause of the disaster was an explosion of gas, the gas having been given off the falls immediately preceding the explosion by the subsidence of the overlying strata in the pillar workings off No. 1 dip off No. 7 right level. It was ignited by a feeder of gas left burning from the previous ignition about 5.40 P. M.

DANIEL R. BLOWER,  
Inspector of Sixth Bituminous District,  
THOMAS D. WILLIAMS,  
Inspector of Ninth Bituminous District,  
JOSEPH WILLIAMS,  
Inspector of Tenth Bituminous District,  
NICHOLAS EVANS,  
Inspector of Eighteenth Bituminous District,  
THOMAS S. LOWTHER,  
Inspector of Twentieth Bituminous District."

Letter to the General Superintendent of the Merchants Coal Company:

"Dear Sir:

Having in view the future safety of the Orenda No. 2 mine and persons employed therein, we, the undersigned Mine Inspectors, recommend the following:

1st. That locked safety lamps, without exception, be used in all pillar workings, and in any other working places in and through which fire damp is being generated or carried in the ventilating current.

2nd. That the best known safety explosives be used for blasting down the coal in all pillar workings and in all other working places where fire damp is being generated, the same to be fired by competent shot firers, who shall have the power to refuse to fire any shots that in their judgment may endanger the lives of persons within the mine.

3rd. That the ventilating currents be so conducted as to make all haulage roads and traveling ways on intake airways.

DANIEL R. BLOWER,  
Inspector of Sixth Bituminous District,  
THOMAS D. WILLIAMS,  
Inspector of Ninth Bituminous District,  
JOSEPH WILLIAMS,  
Inspector of Tenth Bituminous District,  
NICHOLAS EVANS,  
Inspector of Eighteenth Bituminous District,  
THOMAS S. LOWTHER,  
Inspector of Twentieth Bituminous District. "

For some reason unknown to the Chief of the Department of Mines, the Coroner of Somerset county did not empanel a jury or hold an inquest on the bodies of the victims of this explosion. The Inspectors who had investigated the cause of the explosion were therefore instructed to repair again to the mine to examine witnesses, under oath or affirmation, in accordance with the law, to ascertain the facts in the case. The evidence herewith is the result of their examination:

Peter Donohue, a track layer, who was laying track in No. 10 room, first dip, 7th right, said: "About or a little after 5 P. M. I experienced what I judged to be a sort of explosion of gas coming from the fifth room in 7th right. I didn't see the flame, but felt the heat passing over my head; then I went up the heading and saw the boy who runs the engine and stayed there a few minutes. When the fire boss, Axon, came along, I told him of the explosion, but he paid no attention to my statement. I then went straight up the heading, and the place was very smoky and full of dust. I went up the track and met the track boss, and we fixed the track for the night shift. This took possibly fifteen minutes or more, and went down the heading the second time, and this time I felt the same experience I did the first time and started to run. I had run possibly thirty feet when I saw the gas lit. Judged it was gas; then I went through the first dip heading and started for the outside. On my way out I saw Logan, Morris and Cole. They told me to blow out my light, and Morris asked me about lighting the gas, and why I hadn't reported it to some of the officials. I told him I had reported it to Watson and fire boss. Mr. Logan took me to the manway with his safety lamp. This was nearly seven o'clock."

James Low, a miner, testified: "I and my partner were working in No. 8 room taking out pillars on the day of the accident, and in the afternoon we had a large cave-in in that place. About twenty minutes before we quit working the fire boss came and we told him we had heard that an explosion of gas had occurred in 7th right. He said if the gas was lit we would know about it. We felt the force of the wind from the explosion, but having never had any experience in gas before thought nothing of it. We left work a few minutes before six, and while going through to the heading to 7th right and when between Nos. 5 and 6 rooms, were knocked down. My buttty having lit the gas and we saw the flame. Our light was blown out, and we went back to No. 7 room and got light from the men working in there. While going outside the rope rider said Logan and Morris had gone down the manway. Afterwards we met Cole going down; he asked about the explosion and as to the whereabouts of the fire boss; we said we didn't know."

David Malcolm, a loader, testified: "I was working on the day of the accident in No. 8 room, first dip. Between five and six I felt a gust of wind passing over me, but didn't know what it was, and kept on working. The fire boss came to us; I asked him if it was so that the gas was lit. He just looked at me and said, 'If any gas would be lit you would know about it.' We started for home a little before six, and came out of my room up the dip heading through 7th right, and when we went through the canvas we fell down and had to sit there; didn't know whether I was knocked down or not,

but saw flames over my head and the timbers were all over with sparks. I met Mr. Cole about second right going down. He asked me where the gas was lit. I told him about 5th room."

William Axon, fire boss, testified: "I am the fire boss of part of Orenda No. 2 mine, comprising 1, 2, 3, 4, 5, 6, 7 and 8 dips in first east, 7th right, first and second dip No. 8 proper and back heading. January 25, about 4 P. M., I started out to inspect for the night shift, but was sent out of my district, and examined part of the 7th left first south and the pillar workings. The people were working, but when I came to the top of first dip of 7th right, saw several people I didn't know. One of them said, 'Hello, man, I lit the gas down in the dip heading.' I went down the dip heading and examined the cavity in the roof of room 4, but found no gas in the cavity. There was nobody working in rooms 4 and 5. I examined all the places in the several entries, but found no gas. In No. 9 the roof was working and thought from the cracking of the roof that a fall would occur. On my return I stopped at 6th right and 7th left and heard that Mr. Logan had just left. It was about 6.10 P. M. when I left second dip 6th right on my way out."

John Mayko, pumper, testified: "I was working in Orenda No. 2 and on the night of the accident I was going to work as usual about seven. When I reached the mine foreman's shanty a crowd of night shift men were standing there. I asked, 'What is the matter?' Mr. Hartshorn said he didn't know; that Logan, Morris and Cole had gone inside and that something was wrong. I started down the slope and at 4th right I met Tom Noel, who said I had better not go in; it was too dangerous. I went then to 5th left and to the big air pump. I met Mr. Logan on 5th left on slope at my tool box. He asked me to go with him to 6th right. We passed down the left slope below the 6th. After we passed the hole to 6th right I asked Mr. Logan where he was going, and he said to 6th right. Mr. Logan didn't know that we had passed it. We then went back to the hole and went across to 6th right. Mr. Logan tested for gas there. He said I should stay there and stop all persons going down the slope, and that I should keep my light on the bottom. Mr. Logan said, 'Stay here, Joe, until I come back.' Mr. Logan had gone from me about fifty feet; was talking to me. He had his safety lamp in his hand when the explosion occurred. It sounded like a big heavy shot and knocked me down. I went right up the slope towards 6th right 'phone. I couldn't open the door but a little and saw the flame. Went back again and called on Mr. Logan, but the after-damp was too strong; I couldn't speak. I fell down again. I went to left slope, and fell down, my head inside that hole, and the good air coming through the broken door saved my life."

F. L. Driggs testified: "I work at the power plant at Orenda No. 2 and was at work the day of the accident. Went to work about 6.30 P. M. and cut off the mine circuit at that time. I was ordered to do so by Mr. Hartshorn. The power was not put on again that night."

From the evidence gathered at the mine it was found that word had been sent to Superintendent Logan regarding the first ignition of the gas and as soon as possible he headed a party, consisting of himself, the Assistant Superintendent and the Mine Foreman, to make a personal investigation of the rumor that gas had been ignited.

The occurrence of gas at this mine was very unusual, and all employes were using naked lights.

While these three men were on their way to the place where it was reported gas had been ignited, an explosion occurred, the force of which killed Morris and Cole at the place indicated on the map. Logan, who was near the 5th left, and the two miners, Andrew Stulock and John Stulock, in the 8th left heading, died from the effects of afterdamp.

The two miners were night shift men, but had gone to work during the day shift and were not discovered by the Superintendent.

It would seem from the facts in the case that the Fire Boss was responsible for this explosion, as he undoubtedly, if he knew his business, should have sent all persons out of that section of the mine as soon as the gas was discovered. If he had done this, the death of the five men would not have followed.

---

### THE EXPLOSION AT EUREKA NO. 37 MINE

On the 9th of April a very unusual explosion occurred at Eureka No. 37 mine of the Berwind-White Coal Mining Company, near Windber, by which 7 persons lost their lives.

As no trace of explosive gas had ever been detected in this mine before the accident and as none has been detected since, it is evident that the explosion was caused by an overcharge of dynamite that ignited the coal dust. The amount of dynamite exploded could not alone have wrought such destruction on the fourth main entry, where all the overcasts were blown down and all the stoppings destroyed except one that was built of concrete and was of unusual strength. It is said that the dust from this mine did not explode in the tests made at the Government Testing Station in Pittsburg, but it must be borne in mind that the test made there was not as severe as the test would be from the thirteen holes that had been overcharged with dynamite.

In all cases of this kind, when heavy blasts are fired in rock, even in non-gaseous mines, the roof, sides and bottom should first be thoroughly watered for a distance of about 100 feet from the location of the blasts so as to completely wet and lay the dust. This being the first accident of the kind in this State, I suggest that precautionary measures be taken before similar blasts are fired in future.

The Inspectors' report shows that Assistant Foreman Robert Hunter, while measuring the air current nearly 3,000 feet away, was thrown to the ground by the explosion, a fact that clearly demonstrates its great force. It is fair to presume that if the dust in this mine had been of more inflammable nature, all the persons inside of the mine at the time of the explosion would have been killed.

The report of the Inspectors and the verdict of the Coroner's jury in relation to the accident are printed herewith, together with a map of the portion of the mine affected by the explosion.

## REPORT OF INSPECTORS

"Johnstown, Pa., April 12, 1909.

Hon. James E. Roderick,  
Chief of Department of Mines,  
Harrisburg, Pa.

Dear Sir:

As per your request, we, the undersigned Mine Inspectors, on the twelfth day of April visited and inspected that part of Eureka No. 37 Upper Mine in which seven persons lost their lives by a blast on the 9th instant, about 4.30 P. M.

Upon investigation, we were informed by Mr. Edward Jones, the mine foreman, that Michael Gibson, Arthur Custer, William Gibson, Steve Nemis, Joseph Kowatz, Metro Katopitz and Paul Myernak were engaged in blasting down and removing roof preparatory to the erection of two overcasts, one each at No. 3 and No. 4 right off No. 4 main right entry. Michael Gibson was the rock foreman and for some years had had charge of all rock blasting in the mine. He and Arthur Custer charged fourteen holes with dynamite that had been drilled in the roof at No. 4 entry right. While they were preparing the shots, the other five persons were engaged in removing the roof that had been blasted down the night before at No. 3 entry right. The distance between the two points was about 450 feet, No. 3 being that much nearer the mine mouth. We were informed by the Mine Foreman that Gibson had blasted the roof down at No. 3 entry right the night before and had had some difficulty with it on account of not having used a sufficient amount of dynamite in charging the holes. We were also informed by Robert Hunter, the Assistant Mine Foreman, that he had passed by the place while they were charging the holes and that Gibson, who was tamping one of them, remarked to him that he had had trouble the night before at No. 3 entry right and was giving the holes more dynamite in order to insure the one blast of fourteen holes to break down all the roof necessary for the completion of the overcast. On his way out of the mine and on nearing the mine entrance Hunter stopped to measure the air current, and while thus engaged he heard the report from the blast. The concussion produced was sufficient to throw him to the roadway with considerable force. A rescue party was at once formed, and upon their arrival at No. 3 right they found the five persons who had been at work there dead, and some distance down No. 4 right main and about 250 feet back from No. 4 right they found Michael Gibson and Arthur Custer dead. Nearby them was the battery they used for igniting the blast. We were also informed that three other persons on their way out of No. 2 entry right had been overcome and were found on the No. 4 right main near the entrance to No. 2 right entry. They were taken out and soon revived.

A careful examination of the mine disclosed the fact that the roof at the two points before mentioned was quite different. At No. 3 entry where they had trouble the night before it was very hard and firm with twisted and irregular slips; while at No. 4 it was of a soft character, having regular laminated beds or layers. A very smooth

slip was discovered about  $5\frac{1}{2}$  feet above the roof of the entry. All the holes for this blast appeared to stop at this smooth slip and were drilled at such angles as to make their depths about seven feet. One hole was found that had failed to explode, leaving thirteen that had exploded at one time, causing the loss of life as above stated.

We found that considerable force had been developed in the immediate vicinity of the blast, and also along the entries leading therefrom. Considerable fine dust was found in this part of the mine, and we have every reason to believe that a portion of the very fine dust was consumed by the flame from the blast, but we failed to find sufficient evidence to warrant us in giving an opinion that coal dust played a prominent part in this explosion. However, after a careful examination of the place where it occurred, and from all the facts learned in connection therewith, we are agreed in the opinion that the said Michael Gibson, Arthur Custer, William Gibson, Steve Nemis, Joseph Kowatz, Metro Katopitz and Paul Myernak came to their death by an overcharged blast of dynamite, charged and fired by or in the presence of Michael Gibson, the Rock Foreman in Eureka No. 37 Upper Mine.

And further, that in our opinion the said Michael Gibson failed to use good judgment in the amount of explosive used and also in the number of holes included in the one blast, fourteen being the number, thirteen of which exploded. Either of these numbers of holes was entirely too many to be fired at the same time and place in this or any other mine.

C. B. ROSS,  
Inspector of Second Bituminous District,  
D. R. BLOWER,  
Inspector of Sixth Bituminous District,  
JOSEPH WILLIAMS,  
Inspector of Tenth Bituminous District."

#### Verdict of Coroner's Jury

"Michael Gibson, Arthur Custer, William Gibson, Steve Nemis, Joseph Kowatz, Metro Katopitz and Paul Myernak came to their death from an explosion in No. 37 mine of the Berwind-White Coal Mining Company, on the 9th of April, 1909, said explosion being caused by an overcharge or blast of dynamite while blowing rock at fourth right off No. 4 right heading, the work being under the supervision of Michael Gibson.

Signed:

Selah Linton, Ralph Caldwell, Rev. D. S. Hafer, James Murphy, Michael Conroy, and S. C. Prosser."

---

#### THE EXPLOSION AT LACKAWANNA NO. 4 MINE

On the 23rd of June 21 persons lost their lives in a terrific explosion that occurred at the Lackawanna No. 4 mine of the Lackawanna Coal and Coke Company, at Wehrum. The accident was totally unexpected, as the Department had never been apprised of the existence

of explosive gas in this mine. The Inspector of the district could not at the time give any definite statement as to the number of persons killed or entombed. The Inspectors of the Second, Fourth, Fifth, Sixth, Ninth, Eleventh, Fifteenth, Twentieth and Twenty-first Districts were at once instructed to accompany him to the scene of the disaster to assist in the work of rescuing the living and recovering the bodies of the dead. They were also directed to make a thorough inspection of the mine to locate, if possible, the initial point of the explosion and ascertain its cause, and to place the responsibility on the person or persons who had been guilty of neglect or carelessness. They were also notified to attend in a body the inquest held at Wehrum, July 15 and 16.

The report of the Inspectors in relation to this explosion is a very convincing argument in support of the theory that hardly a coal mine in this State is safe to work in when black powder or dynamite is used, especially when used by ignorant men who know nothing of the dangers lurking in the coal dust of the mine and care nothing about their own safety or the safety of the other employes.

To meet the conditions, as they are found in mines like the Lackawanna No. 4, the mine law should be amended so as to give the Inspectors and the Department full authority to demand that the people in charge of dusty mines shall use all the known precautions and observe strictly the same rules required to be followed in gaseous and dusty mines.

In the proposed law that failed to pass the last Legislature, the term "ordinary" safety lamp was changed to read "improved" safety lamp, which lamp might possibly have shown one or two per cent. of explosive gas in the air of the No. 4 mine, while the ordinary safety lamp could not have detected this amount. It may be stated here that the wet condition of parts of the mine referred to prevented the explosion from communicating to all the parts of the mine and thus the lives of other employes were saved. This accident tends to show that the dust in all coal mines should be watered and taken out. To secure safety for the future mining of coal a stringent law must be passed giving the Inspectors the power to demand that necessary precautions be taken, even at the expense of closing down the mines when, in their opinion, continued operation would be a menace to life. The report of the Inspectors and the verdict of the jury follow herewith; also a map of the mine:

---

## REPORT OF INSPECTORS

"Altoona, Pa., July 14, 1909.

Hon. James E. Roderick,  
Chief of Department of Mines,  
Harrisburg, Pa.

Dear Sir:

At your request, the undersigned mine inspectors, on the 24th, 25th and 26th days of June, 1909, made an inspection of the Lackawanna No. 4 mine, of the Lackawanna Coal and Coke Company, situated at

 & P. 1. 2nd

Wehrum, Indiana county, to ascertain, if possible, the cause, and to locate the initial point of the explosion that occurred in said mine on the morning of June 23, 1909, about 7.40 o'clock, which resulted in the loss of 21 lives and the serious injury of 11 persons.

The B or Miller seam is being mined at the Lackawanna No. 4 mine at a depth of about 180 feet beneath the surface. The coal is hoisted out of a rock slope at a pitch of about 35 per cent. A second opening, a hoisting shaft, is located a short distance north of the slope. The shaft had been equipped for lowering and hoisting persons and was also used in connection with the slope as an inlet for ventilation. A third opening is a shaft located 250 feet west of the foot of the slope and used as an outlet for ventilation. The fan producing the ventilation was placed at the top of this shaft and was operated on the exhaust principle. It is of modern type and construction, 16 feet in diameter and 8 feet wide, and is driven by steam power. It usually produced 131,000 cubic feet of air per minute at a speed of 100 revolutions against a water gauge of 2.75 inches.

Fortunately the ventilating machinery was not seriously damaged by the explosion and continued in operation, except that it stopped possibly for a few seconds, as shown by the pressure gauge chart, but the slope or main entrance, being an inlet and but slightly damaged, allowed the escape of several persons who otherwise would no doubt have perished. It also gave the rescuers an opportunity to enter the mine immediately after the explosion, which we have every reason to believe enabled them to save several lives that otherwise would have been lost.

The main developments in the mine are conducted on the two, three and four entry systems. Haulage is done by rope on the main slope. Electric motors are used for delivering the coal from the different parts of the mine to the main landing at the foot of the slope. Coal cutting machines are of the puncher type and operated by compressed air.

The main entry running north and south and passing the foot of the slope at right angles thereto was used as a haulage way, as was also the west side parallel to this entry. Both of these entries were used as inlets for air from the hoisting shaft and slope to the mine workings, the second parallel entry on the west side being used as a return to the fan shaft, while the east side parallel entry, which passes under the slope and is the fourth entry in this group, was being used as a return north of the slope and an inlet south of the slope. This group of four entries was extended a distance of about six hundred feet north and south of the slope. From these points the developments were continued on the two and three entry systems. The mine is ventilated by five air splits or divisions of the main air current.

We entered the mine by way of the slope or main entrance and made a careful examination of the bottom of the slope and hoisting shaft and for some distance around them. Evidence of considerable force was present at all points, also of flame in many places. Continuing our examination we found that in no direction from the bottom of the slope had the force extended beyond a distance of one thousand feet, except in No. 1 south entries, where it reached the face of each. In this area we found overcasts of concrete strengthened

with steel rails, stoppings of brick and wood, doors and timbers blown in different directions and in many places pieces of them had been carried many feet from their proper location, mine cars derailed, electric wires blown down, motors disabled, very heavy timbers displaced and general debris scattered practically in all directions.

All indications about the bottom of the shaft and slope appeared to point to the fact that the main force had come from the north. Continuing along the main north and on reaching a point beyond the No. 1 chute, which connects this entry with the west side parallel or back haulage, we found that a division of force had taken place at this point, the evidence of which was very plain, very heavy timbers having been displaced and moved in opposite directions, the one division going in the direction of the shaft and slope while the other went in the opposite direction toward the face of the main north entry. Following the latter to a point where an overcast of masonry had been built over this entry we found that the top of the overcast had been blown off, and that the force had spent itself at this point and a short distance beyond, the entry on each side of the overcast for some distance being very wet. Returning from this point to a chute, which we passed through to the west side parallel or 'back haulage,' we found a division of force had taken place on this entry and about opposite to where the same had taken place on the main north entry. From this point we proceeded to the first north entry left and discovered that quite a force had entered the entry. Passing along it a short distance we found evidence of force coming in an opposite direction from the face of the entry. Evidence of considerable heat was also found and on examining the face of the entry and also that of the parallel we found that a blast had been fired in each, and that each blast had done the work intended. No evidence of an excessive amount of flame produced by either was found. However, the blast that had been fired in the entry had been placed in the coal underneath the fire clay bottom. No evidence of any explosives having been exploded was found, except that used in blasts mentioned above; but instead we found three and one-half sticks of dynamite undisturbed in a box a short distance back from the face of the entry. No explosive gas was found in any part of the mine.

After a careful tracing of the forces in the entry we were of the opinion that the initial point of the explosion was at or near its face and that considerable flame had been produced, but from what cause we were unable to determine. We then proceeded to the No. 1 south entry where we found evidence of a force having entered, wood stoppings having been blown out to the right and left of the entry. A door used for directing the air current near a point where the entry turns to the right was blown to pieces and carried toward the face. The force continued to the face of the entry and passed through the last chute to the parallel. A short distance back from the face of the parallel, evidence of considerable heat and flame was found. The main force after entering the parallel passed down the parallel entry some distance below a chute near Nos. 2 and 3 left butt entries, derailing cars and bending and displacing air lines and timbers along its route. We then proceeded to No. 2 entry south and found that the force had entered there, but had spent itself before

going any considerable distance, evidently owing to the excessive amount of moisture along the entry. Continuing on to a point on the south main entry where an overcast of concrete had been erected, we found that the top of the overcast had been blown off, and that the force had spent itself at this point and a short distance beyond, the entry for some distance on each side of the overcast being very damp. We next proceeded to the west main entry where evidence of force having entered was present, but owing to the water having raised to a considerable depth, caused by the pumps being disabled, we were unable to explore to any great extent. However, this force weakened and gradually spent itself before traveling any great distance, and was no doubt checked by the amount of moisture along this entry.

We returned from this point to the first north entry left, which about completed a circuit of that part or parts of the mine affected by the explosion. We retraced our steps through the entry, but failed to find any evidence that would in any way change our opinion, formed on our first examination of this entry, viz., that the initial point of the explosion was in this entry. We then left the mine.

On the morning of the 26th we entered the mine and made another close examination of the first north entry left, and on examining the blast we found that the fire clay had been completely loosened up, especially in and about the center. A piece of burned fuse was found, but the depth of the water at this point prevented us from making an examination of the bottom of this blast, as before stated.

From this point we proceeded again to the No. 1 south entry and entered the first butt entry. Continuing along the entry until we reached the first opening to the left, we entered and discovered evidence of force having traveled up this entry or aircourse. We continued to the second cut-through north of the slope, which had been driven through the pillar between the main north and east side parallel entries. A brick stopping that had been placed in this cut-through had been blown out and in the direction of No. 1 south entry, this being near where the division of force took place on the main north entry. We returned by way of this aircourse, tracing the force, which gradually weakened until it joined the force coming up No. 1 south entry at the No. 1 left butt entry. We continued from this point on up the No. 1 south entry and through the last chute leading into the parallel and to where the powder had exploded, as before mentioned. We then returned to the outside.

On June 27th, Alexander Monteith, one of the inspectors who assisted in making the investigation, visited the hospital and received the following statement of Thomas Bestesta, an Italian miner, who worked in the first left north entry: 'On the evening of June 22nd, on quitting work, we fired a shot in the bottom. The hole was drilled in the coal. This shot displaced the fire clay in a large piece, too large to be loaded in the car. We returned on the morning of the 23rd and decided to break it. We placed two and one-half sticks of dynamite (40 per cent.) on or under the fire clay (attached to it was 6 feet of fuse) and returned to a cross-cut 15 to 20 yards back. The shot went off, filling the place with flame.'

When asked if he felt any shock previous to the blast he said that he did not.

The coal underneath the fire clay had evidently been crushed to a greater or less extent by the blast the evening before, and this

amount of dynamite, having been exploded in the coal and not being confined, evidently produced much heat and flame. The concussion produced by the exploding dynamite sent the flame at a rapid rate out of this entry, thereby setting up a destructive distillation of gases from the dust thrown in suspension along its route until it reached the main north and west side parallel entries at the point where the division of force took place on these entries, as before mentioned. The entries at these points had the appearance of having been dry, and the dust that had been deposited on the roads, especially on the roof and sides, (for we believe that the most dangerous dust is to be found on the roof and sides), became suspended in the air, and this coming in contact with the flame produced quite an explosion at this point and was transmitted to all parts of the mine, with the effect herein described.

From our observations and the statement of Bestesta, we are firmly of the opinion that the initial point of the explosion was at or near the face of No. 1 north entry left. The general trend of force from that point, as herein described, was, we think, sufficient evidence to establish that fact. The statement of Thomas Bestesta not only confirms this opinion, but establishes the fact beyond any doubt both as to the initial point and the primary cause of the disaster, this cause being the firing of what might be termed an open or unconfined blast of dynamite which spent its force on the atmosphere of the mine, thereby producing the same dangerous effect as that of a blown-out shot.

We are further of the opinion that the disaster was the result of carelessness or lack of knowledge of the proper use of explosives, and while we greatly deplore the disaster and the way in which Bestesta prepared the blast that was the primary cause, we think it only just to commend Bestesta for his truth and veracity which he so manfully maintained after the disaster occurred relative to its cause. His statement is, in our opinion, sufficient evidence that he was ignorant of the dangers likely to follow his act. Otherwise he would probably not have confessed, and if he had not confessed, the primary cause would no doubt have been recorded as one of the unsolved mysteries connected with mine disasters.

Three things presented themselves very plainly to us in our examination of this mine, and we deem it advisable to call attention to them in this report. They are as follows:

1st. That the greatest force was developed in the main inlet road or airways, and at points that were dry.

2nd. That the forces weakened on entering the return airways.

3rd. That the forces were completely spent when they came in contact with plenty of moisture for a considerable distance along the entries.

We deem it our duty to offer the following recommendations in order to better secure the lives, health, safety and welfare of persons employed in Lackawanna No. 4 mine, Lackawanna Coal and Coke Company:

1st. That none but permissible explosives be used for the purpose of blasting coal or other material in the mine, such as have passed the government test and are noted on the permissible list.

2nd. That the mine be kept as free as practicable from dust, and if necessary to prevent any dangerous accumulations of dust from

floating in the atmosphere, the same be thoroughly watered and kept wet.

3rd. The exclusive use of non-combustible material for stemming all shot holes.

4th. That extreme caution be exercised in blasting and handling explosives.

5th. That no shot shall be laid deeper than the under-cutting.

6th. That safety lamps be used when and where directed by the law.

7th. That rigid discipline be enforced and maintained at all times.

8th. The employment of a sufficient number of fire bosses to examine every working place without exception and all roadways immediately before each shift.

9th. That these recommendations apply not only to Lackawanna No. 4 mine of the Lackawanna Coal and Coke Company, but to all other mines of similar conditions.

Respectfully submitted,

#### Verdict of Coroner's Jury

"We, the Jury impaneled to determine the cause of the death of the seventeen miners or employes of the Lackawanna Coal and Coke Company, find that their death was caused by an explosion, presumably dust, in Mine No. 4, owned and operated by the said company, located at Wehrum, Indiana county, Pennsylvania, on June twenty-third, one thousand nine hundred and nine. Said explosion was caused by the carelessness of Thomas Bestesta, a miner, firing a dynamite shot, not tamped, at the face of first left heading off north main heading.

Signed:

Franklin Sansom, Harry P. Dowler, Edward A. McConville,  
Harry Kallaway, Thomas M. Doherty and J. Dalton Johnston."

## THE EXPLOSION AT FRANKLIN NO. 2 MINE

On Sunday afternoon, October 31, about 3.15 o'clock, an explosion of dust occurred in the Franklin No. 2 mine of the Cambria Steel Company, near Johnstown, by which 13 employes were killed and many injured. The Inspectors of the Second, Fourth, Fifth, Tenth, Fourteenth and Twentieth Districts were at once instructed to accompany the District Inspector, T. D. Williams, to the scene of the disaster to examine into the conditions and make a report to the Department.

Franklin No. 2 mine is a non-gaseous mine and has been worked as such from its inception, every person working therein having used an open light. Yet in this mine, which is considered and in fact is a safe mine, 13 persons were instantly killed by an explosion due to the recklessness of two men, who in face of instructions to the contrary used dynamite in blowing the coal from the solid when it should have been mined with the pick.

The report of the Inspectors, the verdict of the jury and a map of a portion of the mine are printed herewith.

---

REPORT OF INSPECTORS

"Johnstown, Pa., November 3, 1909.

Hon. James E. Roderick,  
Chief of Department of Mines,  
Harrisburg, Pa.

Dear Sir:

Upon learning of the accident at the Franklin mine and in accordance with your instructions, we, the undersigned Inspectors, proceeded to the scene of the explosion, reaching there the same evening and the following morning.

Upon our arrival there we found that the rescuing parties, including Inspector T. D. Williams, had removed all the dead and injured out of the mine. There had been at work during the day some twenty-eight persons, who were employed in different parts of the mine laying track, timbering and others driving an entry. The accident resulted in the death of thirteen persons, two having died since the explosion, and two others are in a precarious condition in the hospital.

The opening is a drift mine penetrating the "B" or what is locally known as the "Miller" seam of coal, and the workings are developed on the double entry system of mining. The main tunnel is driven some five thousand feet from the entrance to the mine, on a course south 37 degrees and 10 minutes east. To the left of the main tunnel and at right angles thereto, main entries are turned to the left at a distance of 1,200 feet apart. The cross or parallel entries are turned at right angles from the main left entries. The mode of mining is room and pillar, the rooms being turned on 60 foot centers and driven about 25 feet in width.

The seam of coal averages about three feet and eight inches in thickness, but owing to a fault or dislocation the seam is reduced in thickness until in some of the entries it is only twelve inches thick, or even less. This faulty condition of the seam is quite evident in the area covered by the 4th and 5th left main entries.

The mine workings are quite extensive and the product of the mine is hauled by electric motors on the main tunnel and main left entries, the voltage of the current being 250. The seam is mined by pick; compressed air is used for drilling in rock and for pumping. The mine is ventilated by a Sturdevant fan ten feet in diameter and has a capacity for producing a large volume of air.

On Monday afternoon, the day following the date of the explosion, we made a careful examination of that part of the mine known as the 4th left entry. We entered the mine on the main tunnel and proceeded along this passageway until we came to the 4th left main entry. Turning into the latter entry we traveled forward to a point where the 5th and 6th parallel entries are turned, at which point we discovered the first evidence of the force of the explosion. From this point inward to the face of the 4th left entries we found debris on the roadway, electric wires torn down, air pipes broken and the stoppings blown out from between the 4th left main entry and parallel and thrown to the main entry, indicating that the force had traveled out both entries.

Upon entering the 11th parallel slant, which had been driven about 120 feet from the 4th left main entry, we found that three shots had been fired in the face of the entry, and upon inquiry learned that two men had been working in this entry on the day of the explosion, who were severely burned, resulting in their death, their bodies being found near this point. This entry was being driven nine feet wide. The coal seam was only twelve inches thick and was being blasted from the solid by the use of dynamite. Owing to the depth and direction of the drill-holes into the solid coal and, no doubt, excessive charges of dynamite, only the front of the holes was dislocated, leaving the back of the drill-holes remaining to a depth of from twelve to eighteen inches. The coal dislocated by the blasts was pulverized into fine dust, and, as we believe, the shots were fired simultaneously. Much heat was produced, together with compression by the blasts. The concussion threw the fine dust into suspension, and the temperature of the flame from the blasts was of sufficient intensity to ignite the floating particles of dust, thereby distilling the gases out of the coal which, in turn, were instantly ignited by the flame of the dynamite.

We, therefore, are of the opinion that the explosion was started by the blasts in the 11th slant parallel. We are also of the opinion that if the coal had been properly mined and a permitted explosive used the explosion would not have occurred. The portion of the mine affected by the explosion was very dry and dusty, but the area covered by the explosion was not very large, the force of the explosion being arrested by a body of water lying in the No. 10th parallel entry off 3rd left main entry. This water absorbed and reduced the intense heat, which was so evident in the dry portion of the mine, and, no doubt, extinguished the flame, there being no evidence of heat beyond this point.

In our examination we found no evidence of fire damp, and we are of the opinion that none was present to play any part in the explosion, but was the result of careless and improper method of blasting without undercutting the coal and the use of flaming explosive.

In order to reduce the liability of such accidents occurring in the future, we offer the following recommendations, which, we believe, if strictly carried out, will better secure the health and safety of the employes in mines of a gaseous or dusty nature:

1st. That permissible explosives be used exclusively in all parts of the mine where blasting is required to be done, and that all shots be stemmed with clay or other non-combustible material, and that all shots be charged, tamped and fired by competent shot-firers employed for that purpose, and that batteries be used for firing all shots.

2nd. That all coal be undermined before blasting, and where the seam thins down to such an extent that blasting it is impracticable, then the whole of the seam should be removed by pick or machine before the bottom is blasted.

3rd. That in all parts of said mine where coal dust has accumulated to a dangerous extent, care should be exercised to prevent said dust from floating in the atmosphere by sprinkling it with water, or otherwise, as far as practicable.

4th. That locked safety lamps be used exclusively in all pillar work and other places in or through which fire damp may be carried in the air current.

We are of the opinion that if the above mentioned safeguards are introduced and properly applied, together with rigid discipline and a strict compliance with the law, no fear of a repetition of this disaster need be entertained. Our experience in the past has proven to us conclusively that we have the necessary safeguards at our command to protect life in our mines, but we are very sorry to say not the necessary legislation to enforce their use in their entirety. Upon recommending them on our visits to many of the mines we are often confronted by a reply from the officials and others that the law does not require them, regardless of the fact that they are and have been in use in many mines for years, and their continued use is sufficient proof of their value for safety. Therefore, we are of the opinion that it is only a question of their introduction and proper use by the operators and officials in order to prevent a repetition of many of the late disasters such as have occurred in some of our mines in the bituminous region.

Respectfully yours,

THOMAS D. WILLIAMS,  
6th Bituminous District,  
C. B. ROSS,

## Verdict of Coroner's Jury

"We find that the parties named came to their death in Franklin Slope No. 2, a coal mine owned and operated by the Cambria Steel Company, a corporation of the State of Pennsylvania, located in Conemaugh township, at 3 o'clock and 7½ minutes P. M., on Sunday, October 31, 1909, as the result of an explosion of coal dust, caused by the igniting of an overcharge of dynamite at the face of the eleventh parallel slant off of fourth left heading. We are of the opinion that the responsibility rests with the common practice of blasting from the solid, as was in vogue in said Franklin Slope No. 2 prior to and at the time of said explosion.

George E. Hamilton, Conrad Bader, George Lavelly, John Woodchak, W. C. Flick, Ivan R. Linton, J. C. McMillen, per H. B. Mainhart."

---

## REMARKS CONCERNING THE PROPOSED BITUMINOUS MINE LAW THAT FAILED OF ENACTMENT IN THE SESSION OF 1909, WITH A COPY OF THE LAW

The remarkable increase in the production of bituminous coal in Pennsylvania in recent years and the consequent changes in mining conditions have added materially to the difficulties and dangers of operation. The recognized inadequacy of the existing laws to meet the greater demand for safeguards on behalf of the workmen and for the protection of property resulted in the passage, by the Legislature of 1907, of a resolution authorizing the Governor to appoint a Commission of five persons to revise the present laws governing mining operations in the bituminous region. The resolution reads in part as follows:

"Resolved (if the House of Representatives concur), That the Governor of the Commonwealth be and he is hereby authorized to appoint a Commission to revise the present bituminous mine laws of Pennsylvania; the said Commission to be composed of five members, two of whom shall be selected from among the operators of the eastern and western sections of the bituminous region, and two from among the mine workers of the eastern and western sections of the bituminous region (from a list to be submitted by the mine workers), and one who shall be a person versed in the art of mining and who has no pecuniary interest in the operation of any coal mine in Pennsylvania.

The said Commission is hereby authorized to select an attorney to assist them in the work of revision, and also a stenographer, both of whom shall be paid from the said appropriation of fifteen thousand dollars.

The said Commission shall hold its meetings in Pittsburg, where all persons who are interested in the revision of the said bituminous mine laws may appear and give expression to their views. The said Commission shall have the right to call into consultation any persons who, in its opinion, may be able to give information that will assist in the work of revision.

The said Commission shall make a report of its deliberations to the next Legislature, which will convene January, 1909."

Under this resolution the Governor, after careful consideration, appointed as representatives of the mining interests George W. Schluederberg and Robert A. Shillingford, two mine managers, one from Pittsburg and one from Central Pennsylvania, men who were at the time and are now directing two of the largest corporations in the bituminous region. As representatives of the miners he appointed Francis Feehan, President of District No. 5, United Mine Workers of America, located at Pittsburg, and William Currie, President of a local district of the same organization in the central part of the

State. All these appointees were highly recommended as men of ability, integrity and experience. As the fifth member of the Commission the Governor appointed the Chief of the Department of Mines, whose experience in mining in this country covers a period of nearly forty-eight years—seven years as miner's laborer, miner, fire boss and mine foreman, eleven years as superintendent, ten years as mine inspector, ten years as mine manager, and a period of over ten years as Chief of the Department of Mines.

The Commission has been criticized as not properly representing the operators and miners, but my opinion is that a better selection could not have been made than the four persons named. Regarding the fifth member appointed to look after the interests of the State, I have no comment to make, except that he performed his duties to the best of his ability. The Commission worked harmoniously and without domination from any of the members. Ample time was allowed each member to explain his views regarding each section of the law as it was taken up for consideration. Naturally, under the circumstances, no one member succeeded in having his wishes complied with in every instance. In fact, the proposed law as prepared and presented to the Legislature was a compromise measure, embodying, however, the best thought and experience of a majority of the Commission.

The Commission held its sessions at Pittsburg, and after numerous meetings—the time covering about sixty days—the work was finished and the bill ready for the signatures of the members. Then, to the great surprise of the other members, one of the Commission refused to sign it because two of the articles incorporated therein did not fully meet with his approval. His action was greatly deplored, as the Commission naturally felt that in view of the importance of the measure and the amount of thought and labor that had been expended upon it, it should be presented to the Legislature in the way most favorable to its enactment as a law, that is, with the unanimous endorsement of the Commission.

A copy of the bill was sent to the Governor and also one to the Speaker of the House, and in the letters of transmittal sent therewith particular attention was called to some of the vital points in the new bill that had not been covered by any previous legislation. The points were as follows:

“Providing for additional entries required in the opening of new mines and, also, providing escape ways in mines already opened.

Providing safe traveling ways for men on foot and fixing the height of the same.

Increasing the volume of air for both gaseous and non-gaseous mines, and providing more stringent provisions for conducting the air to the working places, with measurements to be taken of the same at the face of working places, and the stoppings used to force the air to the face to be of incombustible materials.

For the use of safety explosives whose use shall be permitted by and under the direction of the Department of Mines, and blasting by shot firers in gaseous mines under certain prescribed conditions.

For the wetting and removal of dust from mines.

For a sufficient number of assistants to mine foremen to visit each working place twice daily, for the purpose of instructing the miners to avoid accidents from carelessness by the men themselves.

For providing for a better grade of illuminant oil, under test of the Department of Mines.

For ambulances at mines to transport the injured.

Regulations for shaft sinking.

For the more extended use of safety lamps.

Requiring a certificate of competency for the superintendent of gaseous mines where locked safety lamps are used exclusively.

For the prevention, if possible, of blown-out shots, by the shearing of coal in entries in gaseous mines.

For safeguarding coal properties against oil and gas wells drilled within the coal territory, by requiring record of location of holes to be filed at Department of Mines.

Legalizing the use of electricity in gaseous mines and providing for special rules for the installation of it.

Requiring age of a boy from school records before employment.

For more careful supervision in the employment of men with a view to their ability to understand the conditions of the mines, laws and rules.

Increasing the number of mine inspectors and districts, and providing for the grading of their salaries according to the length of service."

When the bill finally reached the Legislature it was referred to the Committee on Mines and Mining of the House, and a hearing before that Committee was held March 10. At this hearing Mr. Feehan, a member of the Commission, made a long and bitter argument against the adoption of the articles on Safety Lamps and Electricity, and Mr. Shillingford, also a member, made a brief speech in refutation of his statements. At the second hearing before the Committee, March 16, after it had become known that the Commission was not unanimous in support of the bill, the operators, managers and superintendents who were opposed to it appeared in force to prevent it from being reported out of Committee. Several lawyers made most rabid speeches against the bill, but it was painfully evident that they did not understand what they were talking about, and the one who made the most bitter attack on it failed utterly to comprehend its intent or scope, as he directed his attack against sections in it that were not at all new, but were merely repetitions of the old law. There was no stenographic report made of the proceedings of this meeting, or possibly some of the persons who took a prominent part in the discussion would afterwards have read with some degree of shame their unfair and illogical statements.

At the third hearing before the Committee, in addition to the many operators, managers and superintendents, several miners and State Mine Inspectors were present. At this meeting the following letter, addressed to the Committee on Mines and Mining by the Chief of the Department of Mines, was read by his Deputy, Mr. Hall:

Harrisburg, Pa., March 23, 1909.

Hon. Milton W. Shreve, Chairman,

and the Members of the Committee on Mines and Mining.

Gentlemen:

As Chairman of the Commission appointed by the Governor to revise the bituminous mine laws of Pennsylvania, I deem it my duty

to call your attention to the bill as signed by four of the five members of the Commission.

The Commission was composed of two expert mine managers, representing two of the largest coal corporations in the Commonwealth, men who were able, honest and fearless in the discharge of their duties; two representatives of the miners, who were presidents of the United Mine Workers of America, and the Chief of the Department of Mines, representing the Commonwealth. The Commission held numerous sessions covering a period of sixty days, without mentioning many days and nights of hard work spent on the bill at our homes. The most serious consideration was given to the provisions of this bill and it would have been unanimously presented had the four members of the Commission yielded to the demands of Mr. Feehan regarding two articles, to-wit, Article 8—Safety Lamps, and Article 9—Electricity.

The Commission having completed its work, it is for the members of the Committee on Mines and Mining either to reject or endorse it. I do not wish to be understood as making any apology for this bill, but I deem it my duty as Chief of the Department of Mines to say to the Committee that the law now in force was enacted in 1893, when the conditions relating to the safety of the workmen in the bituminous mines were very much better than the conditions that exist to-day.

The first draft of the bill was prepared by the individual members of the Commission and submitted for the consideration of the Commission. Many of the sections were changed to meet the views of the representatives of the operators on the Commission; others were changed to meet the views of the representatives of the miners on the Commission. Other sections were changed to meet the views of the operators, managers, mine foremen, fire bosses, miners and inspectors, after the public hearings, and the proposed bill contains suggestions from all people interested, including oil and powder men, electricians and chemists, who were all consulted.

The proposed law was accepted by many of the best mining men in the State as being reasonable in its provisions, and many operators pronounced it all right and less radical than they had expected. The lawyers, however, who appeared and spoke against it were not so fair in the matter, and the law in several of its provisions was twisted to suit the arguments they had prepared. Unfortunately, there are no stenographer's notes of their remarks extant or they would no doubt be ashamed to read the record of their utterances before the Commission.

The Bituminous Mine Law of 1893 above referred to was at that time and for years afterwards considered the best mine law in the country. The Commission that revised the law at that time had before them the records from 1877, a period of fifteen years. From the records of 1892 they learned that 46,581,575 tons of coal had been produced by 65,857 inside workers from 697 mines, an average of 707 tons for each employe. In the production of this tonnage 129 persons lost their lives inside the mines, showing that for each life lost 361,097 tons were produced and for every 1,000 persons employed inside 1.96 lives were lost. The bituminous region was at that time divided into eight inspection districts, each inspector having an average of about 87 mines. These were the figures and statistics with which the Commission had to deal when revising the law in 1893.

The question of further amendment to the law has been talked of for many years, but not until 1907 was any action taken. In that year the Boden bill was introduced and passed the House, but was not reported out of Senate Committee.

The Commission appointed to revise the present law was confronted by the following statistics: The production for 1907 was 149,559,047 tons, or 3.21 times the tonnage of 1892, and the inside employes had increased to 150,371, or 2.28 times the number in 1892. During 1907 each inside employe produced an average of 994 tons, an increase per employe of 287 tons, or, in other words, an increase of about 40 per centum. Only 195,246 tons were produced per fatal accident inside, against 361,097 in 1892, or a reduction of 46 per centum in the production per fatal accident. During 1907 and for several years previous the bituminous region was divided into twenty inspection districts, an increase of 150 per centum in the number of inspectors from 1892. The number of mines in operation during 1907 was 1,387, or twice the number in operation in 1892; giving each inspector an average of 70 mines in 1907 as against an average of 87 mines in 1892. The loss of life per 1,000 employed inside during 1907 was about 5.08 against 1.96 for 1892, an increase of about 150 per centum.

It may be said that the loss of life for 1907 was abnormally high, but statistics will show that the average loss of life for the past six years, 1902 to 1907, was about 4 for each 1,000 employed inside, an average increase over 1892 of more than 100 per centum, and about three times as many lives as are lost in the mines of Great Britain per 1,000 employed. In this State while the accidents have been constantly increasing, in Great Britain they have been constantly decreasing. There is no valid reason for this great increase in the loss of life in this country, except the one fact that at least 75 per centum of the employes of the mines cannot understand the language of the country.

From the tone of the arguments of a few of the operators or their attorneys, who stated that the law of 1893 was adequate to care for the lives of the miners, the Committee may infer that they, the operators, agree with Mr. Feehan, who has publicly announced, as reported through the press, that the catastrophes of Naomi, Darr and Marianna were due to the neglect of the Department of Mines in not enforcing the law. The Department makes no denial of such sweeping, reckless statements, as all intelligent men know they cannot be substantiated.

I have nothing personal at stake in this matter and no pecuniary motives in urging the passage of this bill. My only desire is to protect the many thousands of mine workers, the majority of whom are ignorant and ill-fitted to take care of themselves. I have heard the arguments of the operators, and, while some of them were well founded, others were entirely without weight or justification. The arguments advanced by the operators and their attorneys against the provisions of this bill were about the same kind of arguments that were presented against the adoption of the provisions of the bills of 1877 and 1893. It was contended at that time that the passage of the bills mentioned would close down the mines; that they could not be operated. It may be observed, however, that the mines are still working and the operators are growing wealthy.

I can appreciate the opposition to this bill, as undoubtedly it will add something to the cost of mining, but I do not see how the men who are operating dangerous mines can reasonably object to its provisions, because its purpose is to protect human life and they are aware of the fact that unless greater precautions are taken it is only a question of time, perhaps to-morrow or the day after, or at least in the near future, when serious explosions may occur, resulting in the death of many hundreds of workmen. The provisions of the law must be strict and they must be enforced if we are to prevent the ignorant and careless workman from sacrificing the lives of his fellow-employees. There are scores of mines in this Commonwealth in which an error in judgment on the part of the foreman or fire boss or the ignorant and careless miner may send hundreds to their death.

It may be something of a hardship to impose some of the provisions on some of the non-gaseous mines, yet in those mines even if there are not as many men killed, there are a great many more suffering through the want of pure air in the smoke-laden atmosphere.

Gentlemen of the Committee on Mines and Mining, think carefully what you are about, as the lives of hundreds of mine workers are in your hands. Give the Department a law that *will protect*, and I will give you my word that as long as I am Chief of the Department of Mines it will be my effort to enforce the law, especially the sections that care specifically for the health, lives and limbs of the miners.

As Chairman of the Commission and as Chief of the Department of Mines, I think that I have the right to ask the Committee to report this bill to the House with a favorable recommendation.

The men who prepared it were experts and have spent sixty days in its preparation, while the time your Committee can devote to it must necessarily be limited. If the Committee will not recommend it favorably, I cannot help it, but with the transmittal of this communication to you I feel that I have finished my work and have done my duty. My sincere hope is that the Committee will not turn a deaf ear to the plea of the bituminous coal miners of this great Commonwealth.

Respectfully submitted,

JAMES E. RODERICK."

---

The following statements made by some of the opponents of the bill and also by two of its defenders are taken from the stenographic report of the meeting.

Mr. ———, of Allegheny county, representing the Allegheny Valley operators, said in part:

"There are a number of points in this bill which would affect the Allegheny operators and many of them would affect the Pittsburgh operators, practically all of the operators of this entire State working in bituminous mines.

First, the law that pertains to electricity. There is not a man who has been engaged in the business of producing coal for ten years that doesn't know that the entire business of electricity as applied to mining has changed. In fact, probably five years has seen a

complete revision, and what will the next five years bring forth? And now a hard and fast rule is to be laid down here which will be obsolete in five years. I would rather see this regulated by a Commission, to be appointed possibly, say two men from the miners, two mining engineers, two electrical engineers and two inspectors, the Chief of the Department of Mines, and a lawyer.

Another thing is the question of masonry stoppings. Now, I don't think it is intended, I don't think that the wording they have in this bill that masonry stoppings should be carried right up to the face. Where an explosion would take place if bratticed there and allowed that gas to expand near the face it would save the balance of the mine. Those who have gone down into a mine after an explosion, where large masonry brattices have been put in, have seen that they were blown asunder and broken up. This is a practice that should not be carried out.

Another question raised by several members in our district is, where it speaks that there shall be no door on any main entrance. There are a few exceptions to this that ought to be permitted, and this ought to be left to the judgment of the mine inspector.\*

Mr. ———, representing the Coke Producers Association of the Connellsville Coke Region, said:

"As a representative of the Coke Producers Association, I desire to say we are not here to oppose any measure which will in any way promote the safety or protect the lives of the miners employed in the Connellsville Coke Region. We believe, however, that Mr. Roderick and this Mining Commission, in their zeal, have created a measure which, if put into effect and force, would in large measure confiscate a great deal of the mining interests of this Commonwealth, and especially of the Connellsville Coke Region.

I think it has been demonstrated clearly to this Committee that this law if put into effect would materially increase the cost of production; it has been variously estimated from six to fifteen or sixteen cents a ton. I believe at least midway between these two extremes would not be an unfair estimate; that is, ten to twelve cents a ton. That cost must come either from the laborer, the consumer or the producer. Now, as to the Connellsville Coke Region, if we put the cost of our production up there, that must come from some place, and you might say put it on the consumer, but in putting it on the consumer we must meet the competition of West Virginia and our neighboring states, and that would interfere quickly with our mines, as forty per cent. are idle to-day. We must meet the competition from other states, and we cannot place it upon the consumer with this beyond our control. We must meet the competition of our neighboring states where the cost of production, the taxation is less, and they are not tied down by hard and fast rules of law. If it comes from the operator they will shut their mines down, because they are unable to meet the competition of neighboring states. Therefore, if we attempt to get this cost, it must be derived from the laborer, and the only way to meet it is by reduction of wages, and, I might say, in the language of Bryan, 'you shall not press down upon the brow of labor this crown of thorns.'"

One of the attorneys for the operators spoke in part as follows:

"In opposing the provisions of this bill we believe it is manifestly unfair and exceedingly oppressive, and will add to the cost of bitu-

\*This objection is met in section 1, Article VII.

minous coal in Pennsylvania from ten to twelve cents a ton. This tax will be a discrimination against Pennsylvania coal and in favor of Ohio, West Virginia and Kentucky.

The bill has been drawn hastily or carelessly and introduces many features that are new to Pennsylvania mining. In the first place, it is going to establish a system of examinations for miners. If the mines in Western Pennsylvania are to be placed on the plane where every man employed in them is to be examined, that certainly is introducing a new and strange theory into the law of this Commonwealth. Section 13 of Article V means nothing else, because it says: 'No person is to be employed to work in the mine until he has given satisfactory proof that he can do the work allotted to him without endangering the lives of his co-employees, unless said person is put to work with an experienced miner.'

There are a number of other things, among them that of sprinkling and hauling dust. The provisions of this bill alluding to that are absolutely impossible to enforce. Take the provisions of Article IV, Section 1. There is a provision there in that bill that makes it impossible to comply with that provision. Before I finish the dust examination I want to call attention to another very oppressive feature of this bill, an unnecessary one. Section 1 of Article IV provides that there shall be a careful examination by the fire boss before each shift. Now, we understand that that examination must be made between three and six o'clock, and if you turn over to Article IV, section 3, that a 'second examination by the same or other fire bosses shall be made during working hours of every working place and every roadway in the same manner as the first examination.'

\*That is, two examinations before noon, and if you go over to Article V, Section 10, you find there a provision for two more examinations. It says there that 'in all mines the mine foreman shall employ a sufficient number of assistants to insure a visit to each working place, either by himself or by his assistants, twice each day, once in the forenoon and once in the afternoon.' Under the law of 1893 we have an examination each morning, and here we are to submit to four examinations a day. The hardship of that is that that requires a large number of qualified assistant foremen and mine bosses. They are scarce and hard to get, and command high wages. They command much higher pay than the ordinary employe of the mine. Those four examinations are absolutely oppressive and unnecessary. You cannot legislate to make a mine safe, and after all it is personal supervision, it is superintendence, it is careful attention to work that is going to make mining safe.

There is a provision in Article V, Section 12, that if enforced by the mine inspector provides that where there is a collection of gas in a mine that he can require the drilling of a hole six inches in diameter to let that gas out. In Western Pennsylvania where we have high hills we have physical conditions that render that absolutely impossible. Here is a new idea, that they shall drill a hole six inches in diameter from the surface to the high point in such fall in order to give the gas an opening to escape to the surface.

I prosecuted a lot of people under the mining law and that is why I stand here, too, with some authority as a lawyer, and say that the present mining law, if enforced, is absolutely sufficient for the bituminous region.

---

\*Mr. Adams' answer shows the fallacy of this argument.

These are a few of the things that make this Act absolutely oppressive, unconstitutional and wrong."

One of the leading members of a large coal company, after a lengthy argument, said:

"This law is imperfect throughout. It is imperfect in phraseology, ungrammatical, ambiguous, and gives room for doubt and litigation."

Mr. Thomas K. Adams, Mine Inspector, said:

"I want to say of this Commission that they have shown great courtesy to all those who wished to appear before the Commission to give their opinions upon this bill. We had advance copies of their work. The operators had advance copies of their work. We appeared before the Commission and gave our views as to what we thought would make a good bill. We have diversified interests in our State—the operators on the one side and the miners on the other—and you know that all of our legislation is more or less of a compromise, but we must not lose sight of the principal of protection. I think the bill is a good measure, and, if enacted into a law, will afford a great deal of protection to the miners. There is great necessity for having some other law than we have at present.

One gentleman stated, 'you will have to examine all the miners.' That is not in the proposed law. You want to obtain information whether the man is competent to do the work before you send him into the mine producing gas, or to play the miner. That doesn't say that you have to put him through an examination, but you have to have the information.

Another gentleman says, 'you will have to have four examinations per day.' That is not in the proposed law. Two examinations a day are required; that is the way the bill is constructed.

In regard to bore holes. This is being done now by the Frick Company and the Oliver Company, and it has been effective in eliminating standing gas from those falls, in old workings.

I have no idea that it will cost ten to twelve cents a ton to carry out the provisions of this bill, and I do not believe it will drive one operator out of business in this State. We were told the same story in 1892 when we were formulating the law that we have to-day. And yet we have increased the production from 46,000,000 tons up to 149,000,000; from 60,000 men employed up to 150,000 men.

I want to say to you that the part that is devoted to electricity was drawn up with the best expert electricians that we have in this part of the country. That is their work, not the Commission's work, and I venture to say that it is one of the best codes we have, either in Germany, Belgium or New Zealand, because it is practically the New Zealand code approved by expert mining men. The present law is almost silent about how to install electrical machinery. It is put in any way, without regard for safety or anything else, with the exception of several companies who keep electricians and do their work right, and some of those men don't have objections to this bill. The Pittsburg Coal Company exceeds this electrical code, and thinks it will be a great protection, and is going to carry it out regardless of the law.

In regard to the examination that should be made twice a day by the mine foreman, it would increase the safety, of course, if done

properly by certified men. He ought to go into the different working places and instruct the men where to stand and to set the timber, and where to drill his holes, fire a shot, and so on. If he cannot make his rounds, he should have an assistant. I can go into fifty headings where they work in three feet, in three hours, and make a visit, too, and do it, and give the proper instructions.

About the shearing and cutting of coal: That is to prevent the explosion. When you prepare the coal properly and shear it, you reduce the amount of the explosive to be used, and in that way you reduce the liability of having a blown-out shot. You scarcely ever see a blown-out shot where the coal is properly mined.

The proper height of a traveling way should be five feet with our low seams; nothing less than five feet."

Mr. Patrick Gilday, President of District No. 2, United Mine Workers of America, said:

"Mr. Chairman and Gentlemen of the Committee: After listening to those gentlemen, I do not think there is any of the bill left, not even the title of it, and I have not very much to defend. I don't purpose to try to defend or make reply to all of the statements made, but I am somewhat surprised at the statements made by some of the gentlemen, not only to-night, but last Tuesday night.

One thing that has been forced upon me, listening to the arguments on these two evenings, is that the Governor made a grand mistake in appointing the five incompetents that drafted this bill. By the remarks made here it seems that they were better adapted for growing pumpkins than drafting mining laws. I, however, don't know some of these people personally, and yet I know they are as well versed in mining and the needs and wants of the miners and what is necessary for safety, both the safety of the property as well as the life and safety of the miner, as any gentleman sitting in this room to-night, and I am sorry to hear gentlemen making the statements they have made, that those gentlemen did not know what they were talking about when they drafted his bill, that it is drastic and vicious.

I remember being present in Pittsburg when the gentlemen—many of whom are here to-night—were invited before that Commission. They were given a full opportunity to express their opinions, not only by word, but by writing, and there were none of the mistakes pointed out to the Commission at that time that seem to be pointed out to-night, and I am forced to the conclusion, notwithstanding the kindheartedness that has been expressed towards the miner, that they have a kinder heart towards the dollar than towards the life and safety of the miner. I do not like to make this statement, but I am forced to the belief that commercialism has more to do in trying to tear this bill to pieces than humanity.

I remember four years ago coming down to Harrisburg for the purpose of getting some mining legislation, and we were told the same story as we are told to-night. 'Let us go slow on this matter. Let us set the matter over for two years and let us draft a bill that will be satisfactory.' A bill was presented in the House two years ago, and after several hearings before the Committee some of the very same gentlemen appeared and by their talk before the Committee the gentlemen who drafted that bill were going to put them

all out of business if their ideas were put in force, and every mine in this State would close down if the bill should be made a law. We were counseled to go slow and take two years more and introduce a resolution asking for the appointment of a Commission representative of miners, operators and owners of the State. That was done. Two years have been delayed in doing that, and many scores of accidents have taken place within the last two years. Now we are confronted again with the statement that this bill is drastic and vicious, that there is so much capital invested and so much to be considered that it is important to this Committee, and the Committee were told last Tuesday night that they would commit a legislative crime if they were to pass upon this bill. Now we are asked to leave the bill go over two years more and study over it. Who is going to study over it? This Committee? None of these gentlemen know whether they are coming back to the House or not, unless they have a cinch on politics. The purpose of the miners is not to embarrass the operators. What benefit would it be to the miner to have the bill passed as presented by that Commission if the statement is correct, as made, that it would close down the mines in this State? What good would such a mining law be to the miner if he had no work? The miner don't want to see one-tenth of a cent put on the price of coal. But the miner does ask of this great State of Pennsylvania that she protect the life and health of the mine laborer working in the mine. Only the Legislature of Pennsylvania can enact a law that will safeguard their rights, and we come here to plead before this Committee, and we ask them to pass a bill that will protect the health and life of the miner, and at the same time, if possible, not increase the cost to the operator or injure his business. When we injure the operator's business and close down the mines, we injure ourselves to a greater extent than we do our employer, because usually the employer has something more to fall back on; but when the miner loses employment he loses his living.

I want to impress upon the Committee that it is not the purpose nor am I delegated by the miners to ask you to increase the cost of production, if it is possible to pass a bill without doing so, but we do say that the number of accidents taking place by explosions, falls of roof, etc., has become so numerous that some steps must be taken to protect the miners.

The number of miners unable to speak English to-day are 65 per cent. of the miners inside the mines. The Coal Companies will tell you that they are forced to employ this class of labor. When they employ that class of labor there must be more protection and more attention paid to that class than there was twenty years ago, when it was pretty nearly all English-speaking miners and all you had to do was to tell a man where his room was and tell the miner to take him to a certain heading. Now, sometimes the miner has to take the man in, put the lamp correct on his head, take the lamp out of his fingers for fear it would burn him—he doesn't know how to carry it—and protect him from falls of rock and loose coal; and it is necessary for someone to go around to those places and notify those men, if they see dangerous roofs or loose coal or if any of those people are working in danger, and instruct them. But if you leave them in the face not knowing their danger there, and there is nobody to instruct them, you are going to bury some of them. I come in as close

contact with the mine foreman and the superintendent and the miner as any man in this State, and I know this, that if the Coal Companies had sent their foremen and superintendents here, who are in close touch with the miner, instead of their attorneys, the position would possibly be different before this time. The man who sits in the office and looks over the cost account does not know as much about the dangers of coal mining as the miner who goes into the mine eight or ten hours a day. These are the people who know what is necessary, and if they were called here to-night and asked to express their opinion, there is not a mine foreman in the State of Pennsylvania to-day that would not tell this Committee that it is absolutely necessary to place more safeguards than the present law places around them, and they would urge this Committee to put this bill into the House and make it a law as quickly as possible. I am here because I happen to be a Committee authorized by the miners. Take away the miners and what would become of the coal property? The coal would remain in the hills for the next thousand years. We have hundreds of people in the State of Pennsylvania who have miner's asthma. If there were purer air put into the mines there would be no miner's asthma. But they are refused that because it keeps the fans going all night; the employer says it is not necessary. They tell you it is going to put the mines out of business where the fans must be installed instead of a furnace. I can tell you of a case last week where the furnace backed, and if there had not been people on the ground who understood what took place and went to the men and got them out in time, there would be recorded here to-day 20 or 40 suffocated. I never saw a furnace yet in a shallow mine that was any good, and I don't think any man in this room ever did.

'The members of District No. 2, U. M. W. of A., representing an organized body of 37,000 miners and mine laborers, ask a favorable report from the Committee on Mines and Mining on this bill.'

A great deal of stress has been laid on the fact that if they have to undercut and shear the headings that are fourteen feet or less in width, it will drive the operators out of business. In driving a heading, any fourteen foot heading, where you have machine mining, you can still undercut with a machine. Mr. Clark said it would cost seven or eight cents a ton. In the old days of mining the old practical miner that was driving a heading preferred to shear the coal rather than blast it. They don't do it to-day. The purpose of the Commission in putting that in was to prevent blown-out shots. You have heard of explosions that have been blamed on blown-out shots. The heading can be sheared by a practical miner in one hour, at thirty cents an hour. The heading will turn out eight tons of coal, or four cents per ton. Suppose you have a mine with twenty headings, and that is a pretty good mine; it takes four cents a ton to shear that coal. It will cost, all told, on the twenty headings in the pit, \$6.40 a day, and I am prepared to go with any man who is operating a mine and prove that those headings can be sheared.

The statement that the shot firer is going to cost sixteen cents a ton is incorrect. In the State of Illinois they have shot firers, and it costs them exactly one and three-fourths cents per ton instead of sixteen cents per ton, according to the figures given to us.

I do not know of any section of the bill that is not satisfactory. Mr. Feehan was not satisfied with the bill because he believed elec-

tricity should be eliminated from the mines where they generate gas and locked safety lamps used in the same mines.

The old law defined a gaseous mine as a mine where gas is detected by the *common* safety lamp; the new law says 'where detected by the *approved* safety lamp.'

Mr. ———, of the Central Pennsylvania Operators Association, said:

"The various objections raised have been confined mostly to particular districts or to particular sections of this bill which affect these particular districts. We heard Mr. Feehan two weeks ago in his statement (advocating the use) of safety lamps, while Mr. Gilday is opposed to the use of safety lamps. It is entirely a matter of difference. The objection to this bill is the fact that the Commission has endeavored to formulate a law which will apply to the entire bituminous interests of Pennsylvania.\* They might just as well endeavor to formulate a law which would apply to all of the coal interests of Pennsylvania, for the interests of the districts are as diversified as the anthracite is from the bituminous as a whole. I am in favor of a law which would grant discretion to the inspector, which would affect the particular districts which are so diversified in their requirements. Have that discretionary power vested in the inspector."

Mr. ——— said: "It has been stated that commercialism was more largely at the bottom of this than safety to life and property, so far as the position taken by the operators and owners is concerned. This is unkind and wrong. The owners and operators are more interested in conserving the interests and lives of their men than the whole Miners' Union, or anybody else. In saying that, I recognize the fact that Mr. Roderick is a man of absolute integrity. He has persistently and consistently followed his only idea of procuring a great good which he thought was necessary to have. We all recognize that we want a good official, but there is such a thing as going too fast in our desire to do good in this world, and I think Mr. Roderick's judgment in desiring to obtain what he thought was for the great good has probably been running a little too fast. I am going to say to you of the Committee, don't go too fast."

One of the general managers said in part:

"It is not wonderful at all that there would be a great difference of opinion as to just what our law ought to be as to mining, because our coal seams are so different and the methods of mining must be so different, but I would say to you that if this bill is passed as now framed and we are compelled to *undercut and shear*, we will have explosions ten to one more than we have ever had there before. The explosions we have had here before have been few and far between. We have a coal seam nine feet thick. It is geologically known as the Pittsburgh seam of coal. Out in our region it thickens up, is of less specific gravity, and is more liable to create dust by that undercutting and shearing, and there is no doubt that the most of our trouble was caused by this dust. There are only two methods we have to prevent mine explosions from gas. One is to give a sufficient amount of air to ventilate and to carry off the gas; the other is to use safety lamps.

\*The Commission was appointed for that purpose.

The law prescribes that there must not be less than 100 cubic feet of air per minute furnished for every man employed, and at least a sufficient amount to carry out and render harmless all dangerous and noxious gases; to furnish that much, and as much more in any case as one or more of the inspectors may deem requisite. I stand ready to produce that amount of air that will render harmless and carry out all dangerous and noxious gases. Do you want anything more than that?

How about safety lamps? All entries, tunnels, rooms and other working places in the mine shall be worked exclusively with locked safety lamps. *Gentlemen, where were you when those explosions occurred? Whose fault is it if those explosions occur, if safety lamps are used? It is right down on you and not any one else in this State. You are the men who are to blame.*

We have a condition in our mines that is very peculiar, in our region, with regard to undercutting and shearing the coal. For thirty years I have been familiar with the inside of the mine, and I will say that if you enact a law that will make us shear or cut where we have been shooting our coal without those methods, you will introduce a dangerous thing in our mines that is liable to blow us up. We don't quite understand this explosive business. It is probably a mixture of gas and coal dust. There is an effort being made now to determine just what this cause is.

Now the Commission put sixty days on this law. I will tell you to formulate a law to properly apply to the mining interests of this great State of Pennsylvania would require a corps of five times as many men for five times as much time as they put upon this. You throw away at one full sweep the experience of the last fifty years. You throw all that away and attempt to introduce a qualified form of law gotten up by five men in sixty days.

About Mr. Gilday's representations here: I have seen the same kind of asthma that he has. I have never met a miner with asthma. I have talked with thousands of them and never met a miner yet that had miner's asthma.

Again, those foreign miners in a mine. There is not one man now in the mine that does not understand English. Well, I will say there is scarcely a man in our mines that does not, where we had before plenty of them, and we had fewer explosions then.

You introduce another new feature that is harmful and dangerous to us in regard to undercutting. We do not use many machines. It has never been desirable to use them. We want fine coal, not lump coal. But, really, by undercutting we would get coarse coal. The day has gone by when a man will suffer just for the sake of not using machines. He will take powder and shoot down his coal, and you attempt to make him undercut or shear, instead of shooting, and he will not do it. The day is past when men will work and sweat for that which they can take down for a few cents worth of powder. The history of nearly all our blown-out shots has come from where there has been undercutting."

No attempt will be made by me to show the fallacy of the arguments advanced against the bill, but the reader is left to judge from the remarks of Inspector Adams and Mr. Gilday, a president of the United Mine Workers of America, and from the text of the proposed law, how unjust and how unfair were the criticisms made against

many of the provisions in the bill; provisions, it may be stated, that are to-day in force in many of the best conducted mines of the State, especially those of the H. C. Frick Coke Company. Several of the prominent operators of the State made no objection whatever to any part of the bill, and several of the persons who appeared against it in Committee had previously favored it, but they changed their attitude because they were ordered to do so.

After the third hearing before the Committee on Mines and Mining, I called three of the Inspectors, two attorneys, and a representative of the operators, to Harrisburg. Several days were spent in going over the bill, noting the objections and weighing the arguments against the several provisions thereof, especially the arguments against the article requiring certificates of competency for superintendents of gaseous mines where locked safety lamps are used exclusively, and also the article on the care of gas and oil wells, and the article on penalties. On the advice of the attorneys, the article on gas and oil wells was dropped from the proposed law, the penalty article was amended, and the article relating to certificates of competency for superintendents of gaseous mines where locked safety lamps are used exclusively was amended by eliminating the clauses requiring certificates for superintendents. I think it is only proper to state here that the article on gas and oil wells was handed to me, for incorporation in the law, by one of the prominent speakers from Pittsburg who appeared against the bill. The penalty article was framed after the Anthracite Law, which has been in force since 1870 without imposing any hardship on the operators.

After these changes and other minor changes were made in the proposed law (which changes appear in *italics*), it was taken before the Committee on Mines and Mining for the fourth time, and arguments were made in its behalf by one of the attorneys and by Mr. Feehan, who, regretting his former opposition to the bill, asked that it be reported favorably out of Committee. However, when a vote was taken, a majority voted against favorable recommendation.

The proposed law as presented at the last meeting of the Committee is printed herewith, in order that the work of the Commission may not be lost. It may be that at some future time this law will help another Commission or possibly some member of the Legislature to prepare a new mining code, which I hope will receive greater consideration by the law-makers of the Commonwealth.

---

## AN ACT

Relating to bituminous coal mines and providing for the lives, health, safety and welfare of persons employed therein.

### ARTICLE I

#### Maps and Plans

Section 1. Be it enacted by the Senate and House of Representatives of the Commonwealth of Pennsylvania in General Assembly met and it is hereby enacted by the authority of the same, That the operator or the superintendent of any Bituminous coal mine

shall make or cause to be made by a competent mining engineer or surveyor an accurate map of the mine on a scale of not less than two hundred feet to the inch, which map shall show as follows:

First. All measurements of said mine in feet or decimal parts thereof.

Second. All the openings, excavations, shafts, slopes, drifts, tunnels, planes, main entries, cross entries and rooms and the name or number of each working place.

Third. An accurate delineation of the boundary lines between said mine and all adjoining mines or coal lands and the relation and proximity of the workings of said mine to all adjoining mines or coal lands.

Fourth. The elevation above or below mean tide at Sandy Hook of the top and bottom of each shaft and slope of all drifts, tunnels, planes, and of the face of entries, at each semi-annual survey, and in rooms and entries adjacent to boundary lines at points not more than three hundred feet apart; also the number of last survey station and the date of said survey on the entries; the location of streams, rivers, lakes, dams or any other bodies of water on the surface, with their elevations accurately and plainly marked; the location and elevation of any body of water dammed in the mine or held back in any portion of the mine, giving the true area of said body of water, unless inaccessible before the passage of this act; the location of all bore holes penetrating the coal strata; and the location of all oil and gas wells.

Section 2. When the workings of a mine are within three hundred feet of the boundary lines, application shall be made by the operator or the superintendent to the inspector for information as to the proximity of the workings of any adjoining mine, and if the workings of any adjoining mine are within three hundred feet of the nearest boundary line, the inspector shall so notify the said operator or the said superintendent, who shall have that portion of the workings of the adjoining mine surveyed and shown on the map of the mine first mentioned.

By the written authority of the inspector, the engineer or surveyor of said mine shall have the right of entry into the adjoining mine for the purpose of making this survey only.

Section 3. A true copy of said map shall be kept in the mine office at the mine for the use of the mine officials and the inspector and for the inspection (in the presence of the superintendent or the mine foreman) of any person working in said mine, whenever said person shall fear that any working place is becoming dangerous by reason of its proximity to other workings that may contain dangerous accumulations of water or noxious gases.

Section 4. At least once every six months the operator or the superintendent of every mine shall cause to be shown accurately on the original map of said mine and on the copy of the map in the mine office, all the excavations made therein during the time that has elapsed since such excavations were last shown thereon.

The operator or the superintendent, at the request of the inspector in writing, shall order that any portion of any mine shall be surveyed and entered on the original map when in the opinion of the inspector such portion of the mine is approaching accumulations of water or noxious gases. And whenever any of the workings or ex-

cavations of any mine shall be driven to their destination, it shall be the duty of the operator or the superintendent to cause the mining engineer or surveyor to check up all his previous work and notes of said mine, so that he can certify that the said map shows correctly all the excavations made therein.

Section 5. The operator or the superintendent of every mine shall furnish the inspector of the district with a true and correct copy of the aforesaid original map of said mine on tracing cloth, and at the end of every six months thereafter the inspector shall return said copy to the operator or the superintendent, who shall place or cause to be placed thereon all the extensions made and all parts of the mine worked-out or abandoned during the preceding six months, as provided for in section four of this article, and shall forward the map to the inspector within thirty days from the time of receiving it: Provided, That in lieu of the map on tracing cloth as aforesaid the operator or the superintendent shall have the privilege of furnishing every six months a blue print showing the complete workings of the mine to date. When more than one seam of coal is being worked in any mine, the inspector shall be provided with a separate copy of the original map on tracing cloth or a blue print of the complete workings of each seam, as provided for in this article. The copies of the maps of the several mines as hereinbefore required to be furnished to the inspector shall remain in the care of the inspector of the district in which said mines are situated, as strictly official records, to be transferred by him to his successor in office, and in no case shall any copy thereof be made or any information therefrom be given without the consent of the operator, except as provided for in section three of this article.

Section 6. Whenever a mine is worked-out or abandoned, the operator or the superintendent shall, within sixty days thereafter, extend the inspector's map to show clearly all the worked-out or abandoned territory, with all property and boundary lines and elevations, as required in section one of this article.

The owner or the operator of the abandoned mine shall also, within sixty days after its abandonment, send to the Department of Mines a tracing of said complete original map, which shall be kept in the Department as a public document. The mining engineer or surveyor shall certify that said tracing is a true and correct copy of the original map of said mine and that the original map is a true, complete and correct map and survey of all the excavations made in said abandoned mine.

Section 7. If the inspector shall have reason to believe that any map of any mine furnished to him in pursuance of the provisions of this article is inaccurate or imperfect, he is hereby authorized to have a survey and a new map made of said mine. The cost of the survey and map shall be recoverable from the operator as other debts are recoverable by law: Provided, however, That if the map claimed by the inspector to be inaccurate or imperfect shall be found to be practically accurate, then the Commonwealth shall be liable for the expense incurred in making said survey and map, which expense shall be paid by the State Treasurer upon warrant of the Auditor General issued upon the presentation of voucher approved by the Chief of the Department of Mines.

## ARTICLE II

## Shafts, Slopes, Drifts, Openings and Outlets

Section 1. It shall not be lawful for the operator, superintendent or mine foreman of any mine to employ any person therein, unless there are at least two openings or outlets to the surface from every seam of coal and from every lift thereof, which openings or outlets shall have safe and distinct means of ingress and egress available at all times for the use of the employes. The distance between two shafts shall not be less than two hundred feet, and the distance between the openings to the surface of slopes shall not be less than one hundred and fifty feet, and the distance between drifts shall not be less than fifty feet: *Provided that the distances specified may be less with the written consent of the inspector.* The passageways between said two shafts shall at all times be maintained in safe and available condition for the employes to travel therein, and the pillars in entries between said shafts shall not be removed without the consent of the inspector in writing to the superintendent: *Provided, however, That the distances between said openings shall apply only to mines opened after the passage of this act.*

Section 2. Section one shall not apply to the opening of a new mine or to the opening of a new lift of a mine that is being worked for the purpose of making connection between said two outlets as long as not more than twenty persons are employed at any one time in making the connection or driving the second opening; and it shall not apply to any mine in which the second opening has been rendered unavailable by reason of the final robbing or removing of pillars as long as not more than twenty persons are employed therein at any one time. The cage or cages or other safe means of egress shall be available at all times for the persons employed in any mine that has no second outlet available.

Section 3. A passageway not less than five feet high and three feet wide in the clear shall either be cut around the bottom of every shaft or shall be driven through the solid strata, and shall be kept open at all times so as to enable persons to pass from one side of the shaft to the other.

Section 4. Every gaseous mine opened after the passage of this act shall have at least four main entries, two of which shall lead from the main entrance and two from the second opening into the body of the mine; and every non-gaseous mine shall have at least two main entries, one of which shall lead from the main entrance and one from the second opening into the body of the mine.

After the passage of this act every new mine projected to open up a large acreage with main entries five thousand feet or more in length, wherein gas can be detected by an approved safety lamp, shall have at least five main entries, two of which shall lead from the main entrance and two from the second opening into the body of the mine, and the fifth, which may be connected with an opening to the surface or be connected with the intake airway at or near the main intake entrance, shall be used exclusively as a traveling way for the employes.

Every new non-gaseous mine projected to open a large acreage with main entries five thousand feet or more in length shall have at least three main entries, one of which shall lead from the main en-

trance and one from the second opening into the body of the mine, and one, which may be connected with an opening to the surface or be connected with the intake airway at or near the main intake entrance, shall be used exclusively as a traveling way for the employes.

In every gaseous mine opened prior to the passage of this act having less than five main entries that have reached five thousand feet or more in length and which are to be extended two thousand feet or more, the superintendent shall have a new opening of ample dimensions made from the surface, and the four main entries and the traveling way shall be extended from this opening to the face of the workings. *Provided, however, that this new opening shall not be made unless the inspector of the district and two additional inspectors appointed by the Chief of the Department of Mines shall deem such additional opening necessary for the proper ventilation of the mine or the safety of the miners.* If a mine opened as a non-gaseous mine is found to be generating explosive gas, the operator may continue to work said mine, with the consent of the inspector in writing, under the provisions and requirements of this act for a non-gaseous mine until by due diligence the operator can change conditions to meet the provisions and requirements of this act for a gaseous mine.

The intake entries shall be kept well drained and in safe condition and free from refuse of all kinds so that persons may travel therein throughout their whole length and have a safe and easy means of egress from the workings in case of emergency. Said entries shall be separated by pillars of coal of sufficient strength and shall not be driven more than two hundred feet beyond the last cut-through except for exploratory purposes.

When the main entry of a non-gaseous mine or both main entries of a gaseous mine used for intake for air are also used for mechanical haulage, a separate traveling way leading into the body of the mine shall be provided for the use of the employes in going to and from their work. In mines opened prior to the passage of this act where no separate traveling way is provided, the employes shall be hauled in and out of the mine at the beginning and end of each shift.

Every entry from which rooms are driven shall be provided with a separate entry as an air course, *but the inspector may allow rooms to be driven from the air course entry after all rooms have been finished on the other entry.*

The height of the traveling way shall not be less than five feet and the width shall not be less than six feet. All traveling ways shall be well drained, kept free from refuse of all kinds and free from smoke, noxious gases, and electric wires, unless said wires are so placed and protected as not to endanger life and are kept in safe condition.

Section 5. In every slope with workings on both sides an overcast or an undercast, not less than five feet wide and five feet high, shall be provided as a passage way for the use of the employes to cross from one side of slope to the other. Said overcast or undercast shall connect with available passageways leading to the workings on both sides of said slope. The intervening strata between the slope and the overcast or undercast shall be of sufficient strength at all points to insure safety to the employes: *Provided, however, That if it is impracticable to drive an overcast or an undercast in the solid,*

an overcast or an undercast may be substantially built with masonry or other incombustible material.

Section 6. When the opening or outlet other than the main opening is a shaft not more than one hundred feet in depth and is used by employes for the purpose of ingress to or egress from the mine, it shall be kept available and in safe condition, free from steam, dangerous gases and all obstructions, and shall be fitted with safe and convenient stairways with steps of an average tread of ten inches and a rise of nine inches, not less than two feet in width and not to exceed an angle of forty-five degrees, with landings not less than twenty-four inches in width and four feet in length, at easy and convenient distances. These stairways shall be made safe by having hand rails of suitable material placed on one side, or on both sides when requested by the inspector, and shall be inspected every twenty-four hours by a competent person employed for that purpose. Water that may come from the surface or from the strata in the shaft shall be conducted away so that it will not run or drop on the stairways or on persons while descending or ascending them.

Section 7. After the passage of this act when a mine is operated by a shaft more than one hundred feet in depth, the persons employed therein shall be lowered and hoisted by means of machinery, unless the second opening is a drift or a slope. When the employes are lowered into and hoisted from the mine at the main shaft opening, the second opening, if a shaft, shall also be supplied with a stairway constructed in the manner hereinbefore designated in section six of this article, or with safe and suitable machinery for the lowering and hoisting of persons in case of an emergency.

Section 8. At any mine where one of the openings hereinbefore required is a slope and is used as a means of ingress and egress by the employes and where the angle of descent exceeds fifteen degrees and the length from the mouth of the opening exceeds one thousand feet, the employes shall be lowered into and hoisted from the mine at the beginning and end of each shift at a speed not to exceed eight miles per hour. In every slope where the angle of descent is less than fifteen degrees and where the length of the slope exceeds three thousand feet, the employes shall be lowered into and hoisted from the mine at the beginning and end of each shift at a speed not to exceed eight miles per hour.

### ARTICLE III

#### Signaling Apparatus, Safety Catches, Hoisting Machinery, Ropes

Section 1. The operator or the superintendent shall provide and hereafter maintain in good condition from the top to the bottom of every shaft or slope, where persons or material are lowered or hoisted, a telephone or metal tube of proper diameter suitably adapted to the free passage of sound, through which conversation may be held and understood between persons at the top and the bottom of said shaft or slope, and he shall also provide means of signaling from the top to the bottom and from the bottom to the top of said shaft or slope. The same provisions shall apply to inside planes whereon coal is lowered and persons have to travel. In all gaseous mines telephone

connections shall be made from the surface to the main section of the mine. All signaling apparatus and telephone connections shall be kept in good condition and shall be always available for service.

The operator or the superintendent shall also provide every cage used for lowering or hoisting persons with hand rails at sides and with chain bar or gate at ends, and with a sufficient covering overhead to protect persons thereon, and shall also provide for each said cage efficient safety catches, which shall be tested once every two weeks, and a record of each test shall be sent to the inspector and to the superintendent and also recorded with ink in a book kept at the mine office for that purpose. The ropes shall be securely attached to the sides of the drum of every machine that is used for lowering and hoisting persons or material into and out of the mine, and the flanges shall have a clearance of not less than four inches when the whole of the rope is wound on the drum, and adequate brakes shall be attached to the drum, so that the speed thereof can be controlled when men are being lowered or hoisted. An efficient indicator that shall show the position of the cages in the shaft shall be attached to the hoisting apparatus.

All shafts shall be provided with safety gates at the top and intermediate landings, said gates to be approved by the inspector.

Section 2. The main coupling chain attached to the socket of the wire rope of every shaft shall be made of the best quality of iron and shall be tested by weights or otherwise to the satisfaction of the superintendent, the manner of testing and the result obtained to be entered in a book with ink with the day and date of the inspection; and bridle chains of the same quality of iron shall be attached to the main hoisting rope three feet above the socket from the top cross-piece of the cage, so that no single chain shall be used for lowering or hoisting persons into or out of the mine.

Section 3. In shafts where coal is hoisted and employes lowered into or hoisted from the mine the ropes, links and chains shall be of ample strength, with a factor of safety of not less than five to one of the maximum load. In shafts used exclusively for lowering or hoisting employes and material the factor of safety of ropes, links and chains shall be not less than ten to one of the maximum load. All such ropes, links and chains shall be carefully examined at least once every twenty-four hours by a competent person delegated for that purpose by the superintendent, and any defect therein found by which life and limb may be endangered shall be reported at once in writing to the superintendent, who shall immediately proceed to remedy the defect, and until that is accomplished he shall prohibit any person from being lowered into or hoisted from the mine by the defective apparatus. The person making said examination shall keep a daily record of each inspection in ink in a book kept at the mine office for that purpose, and he shall send a copy thereof each day to the superintendent.

Section 4. All machinery in and about the mines from which any accident would be liable to occur shall be properly fenced off by suitable guard railing.

Section 5. No greater number of persons shall be lowered or hoisted at any one time than may be permitted by the inspector, and notice of the number so allowed to be lowered or hoisted at any one time shall be kept posted by the operator or the superintendent in

conspicuous places at the top and the bottom of the shaft. The aforesaid notice shall be signed by the inspector. The speed of the cage when lowering or hoisting persons shall not exceed nine hundred feet a minute.

## ARTICLE IV

### Duties of Fire Boss. Safety Lamps

Section 1. In every mine wherein explosive gas was generated before the passage of this act, or shall be generated after the passage of this act, in sufficient quantities to be detected by an approved safety lamp, a fire boss or fire bosses shall be employed by the mine foreman. The fire boss shall have received a certificate of qualification from the Department of Mines on the recommendation of the Examining Board, as provided for in section four, article twenty, of this act. It shall be the duty of the fire boss to examine carefully before each shift enters the mine every working place without exception, every roadway and every accessible road to abandoned workings and falls in the mine; but before proceeding with the examination he shall see that the air current is traveling in its proper course. In making the examination he shall use no light other than that enclosed in an approved safety lamp. The examination shall begin within the shortest possible period of time necessary for its completion before the regular time appointed to commence work, but in no case shall it begin more than three hours prior to the appointed time for each shift of miners or loaders to commence work. The period of three hours shall be computed from the time the fire boss commences his examination until he returns to the station provided in the mine or on the surface. The fire boss shall examine for all dangers in all parts of the mine under his charge, and after each examination he shall leave at the face and side of every place examined the date of the examination as evidence that he has performed his duty. He shall also examine the entrance or entrances to all worked-out and abandoned parts adjacent to the roadways and working places under his charge where explosive gas is likely to accumulate, and he shall place a danger signal across the entrance to every working place and every other place where explosive gas is discovered or where immediate danger is found to exist from any other cause, and said signal shall be sufficient warning for persons not to enter. The meaning of all danger signals shall be explained to the non-English-speaking employes of the mine in their several languages by the mine foreman, assistant mine foreman or fire boss, through an interpreter.

Section 2. A suitable record book shall be kept at the mine office on the surface of every mine wherein explosive gas is generated, and immediately after the examination of the different sections of the mine by the fire bosses the record of the examination shall be entered in said book with ink and signed by the persons that made the examination. This record shall show the time taken in making the examination and also clearly state the nature and location of any danger that may have been discovered in any room or entry or other place in the mine, and if any danger or dangers have been discovered, the fire bosses shall immediately report the location thereof to the mine foreman, who shall remove said dangers forthwith, if practicable. If that cannot be accomplished, the mine foreman shall

notify every person who may be endangered thereby not to enter his working place. No person shall enter the mine until the fire bosses return to the mine office on the surface, or to a station located in the intake entry of the mine (where a record book as provided for in this section shall be kept and signed by the person making the examination) and report to the mine foreman or the assistant mine foreman that the mine is in safe condition for the men to enter. Where a station is located in any mine it shall be the duty of the fire bosses to sign also the report entered in the record book in the mine office on the surface: Provided, however, That no person shall enter a mine generating explosive gas until the fire bosses return to the surface and report to the mine foreman, or until they have notified the mine foreman by telephone or otherwise that the mine is safe.

The record books of the fire bosses shall at all times be accessible to the inspector and the employees of the mine.

Section 3. A second examination by the same or other fire bosses shall be made during working hours of every working place and every roadway in the same manner as the first examination, and the record of the second examination shall be entered in the record book in the same manner as the record of the first examination was entered, and signed by the persons that made the examination.

Section 4. The mine foreman and the fire boss shall at or near the main entrance to the mine provide a permanent station with a proper danger signal designated by suitable letters and colors placed thereon. In every mine generating explosive gas, when the working sections are one mile or more from the entrance to the mine or from the bottom of the shaft or slope, a permanent station of suitable dimensions may be erected by the mine foreman (provided the location is approved by the inspector) for the use of the fire bosses, and in the said station a fire-proof vault of ample strength shall be erected of brick, stone or concrete, in which the record book of the fire bosses as described in section two of this article shall be kept at all times. It shall not be lawful for any person except the mine foreman in case of necessity (and such other persons as may be designated by him) to pass beyond said permanent station and danger signal until the mine has been examined by a fire boss as provided for in section one of this article and the mine or certain parts thereof reported by him to be safe. The fire boss shall not allow any person to enter or remain in any part of the mine through which a dangerous accumulation of gas is being passed in the ventilating current from any other part of the mine. He shall report at once any violation of this article to the mine foreman.

Section 5. Any employe or other person except those hereinbefore provided for who passes by any danger signal into the mine or into any part of the mine before the mine has been examined and reported to be safe, or any employe or any other person who passes by any danger signal placed at the entrance to a working place or any other place in the mine without permission from the mine foreman, the assistant mine foreman or the fire boss, shall be deemed guilty of a misdemeanor and it shall be the duty of the mine foreman, after the case has been reported to him, to notify the inspector of the violation, and the inspector shall forthwith enter proceedings against such persons as provided for in section two of article twenty-six of this act.

Any mine foreman who fails to notify the inspector forthwith of any violation of the provisions of this article that has been reported to him shall be deemed guilty of a misdemeanor.

Section 6. When a fire boss cannot properly examine all the working places within the section of the mine allotted to him within the time specified in section one of this article, he shall notify the mine foreman of the fact in writing giving his reasons.

Any fire boss who neglects to comply fully with the provisions of this article relating to his duties, or who shall make a false report of the condition of any place in the section of the mine allotted to him for examination, shall be deemed guilty of a misdemeanor and shall be suspended, and his name shall be given to the inspector for prosecution. If he is found guilty, he shall return his certificate of qualification as fire boss to the Department of Mines: Provided, however, That he may again be an applicant for a certificate as fire boss at any regular examination after the expiration of six months; but if he is found guilty of a second offence he shall return his certificate to the Department of Mines and cannot be an applicant for re-examination.

Section 7. Whenever safety lamps are used by fire bosses or other persons, they shall be so constructed that they may be safely carried against the air current ordinarily prevailing in that part of the mine in which the lamps are being used.

Section 8. All safety lamps used for examining mines or for working therein shall be the property of the operator and shall be in the care of the mine foreman, assistant mine foreman, fire boss, or some other competent person appointed by the mine foreman, whose duty it shall be to clean, fill, trim, examine, light and deliver them locked and in a safe condition to the men when entering the mine and to receive the lamps from the men when returning from work, for which services a charge not exceeding the cost of labor and material may be made by the operator. At any mine wherein explosive gas was generated before the passage of this act in sufficient quantities to be detected by an approved safety lamp, a sufficient number of safety lamps, not less than one-fourth of the number in use, shall be kept in a convenient place and in good condition for use in case of emergency. It shall be the duty of every person who knows that his safety lamp is injured or defective to return it immediately and report such fact to the person authorized to receive and care for said lamp, who shall report the matter to the mine foreman, assistant mine foreman or fire boss as soon as practicable.

Section 9. Nothing in this article shall prevent a first grade mine foreman or a first grade assistant mine foreman from acting as fire boss.

## ARTICLE V

### Mine Foreman and His Duties

Section 1. In order to secure efficient management and proper ventilation of the mines, to promote the health and safety of the persons employed therein, and to protect and preserve the property connected therewith, the operator or the superintendent shall employ a competent and practical mine foreman for every mine where ten or more persons are employed. The mine foreman shall have full

charge of all the inside workings and of the persons employed therein and shall see that all the provisions of this act are complied with, so far as his duties are concerned, and that the regulations prescribed for each class of workmen under his charge are carried out in the strictest manner possible. If the mine is gaseous, the mine foreman must possess a first grade mine foreman's certificate. If the mine is non-gaseous, the mine foreman must possess either a first grade mine foreman's certificate or a second grade mine foreman's certificate.

When the mine workings become so extensive that the mine foreman is unable personally to carry out the requirements of this act pertaining to his duties, he shall have the right to employ a sufficient number of competent persons to act as his assistants, who shall act under his instructions in carrying out the provisions of this act. If the mine is gaseous the mine foreman's assistants must possess first grade assistant mine foremen's certificates.

In case of the necessary temporary absence of the mine foreman, he may deputize his work for the time being to his assistant, who shall perform all the duties of the mine foreman.

Section 2. The mine foreman shall devote the whole of his time to his duties in the mine when the mine is in operation, and shall keep a careful watch over the ventilating apparatus, the ventilation, airways, traveling ways, timbering and drainage, and shall see that all stoppings along airways are properly built as provided for in section five of article seven of this act.

He shall also see that proper cut-throughs are made in the pillars of all rooms and of all entries in accordance with section three of article seven of this act, and that they are closed when necessary, so that the ventilating current can be conducted in sufficient quantity through the last cut-through to the face of each room and entry by means of check doors. He shall not permit any room or entry to be opened in advance of the ventilating current or in advance of the last cut-through in the entry, excepting room necks, which may by the consent of the inspector be opened by entrymen driving entries.

Section 3. The mine foreman shall at least once every week measure the air current at or near the main inlet and outlet airway and also in the last cut-through in the last room and in the first entry cut-through beyond the last room turned in each entry, and make a record of said measurements as provided for in section eighteen of this article. For making said measurements an anemometer shall be provided and kept in good condition by the superintendent of the mine.

Section 4. In case of accident to a ventilating fan or its machinery, whereby the ventilation of the mine would be seriously interrupted, the mine foreman shall order the men to withdraw immediately from the mine and he shall not allow them to return to their work until the ventilation has been restored and the mine has been thoroughly examined by him, an assistant mine foreman or fire boss, and reported safe.

Section 5. The mine foreman shall notify the superintendent and the inspector in writing whenever in his opinion the mine is becoming dangerous through the lack of ample ventilation at the face of entries, rooms and other portions of the mine, caused by the undue length of entries and airways or from any other cause, resulting in

the accumulation of gas or coal dust, or both, in various sections of the mine. The superintendent and the inspector shall then make a thorough personal inspection of said mine and if they find that the mine is becoming dangerous the superintendent shall at once proceed to have the mine put in safe condition and, if necessary, have an additional opening of ample dimensions sunk from the surface to the interior of the mine, which opening can be used as an outlet or inlet for the air and also as an escapeway in case of necessity.

In all gaseous mines the mine foreman shall see that when the permanent station of the fire boss is located a mile or more from the entrance to the mine, all abandoned, finished or unfinished workings in the intervening distance between the permanent station and the entrance to the mine are completely shut off from the main intake outlet or manway headings of the mine by stoppings of masonry, concrete, or some other incombustible material of sufficient thickness to keep the explosive or noxious gases from coming in contact with the intake air or with the persons employed therein.

Section 6. The mine foreman shall direct and see that every working place is properly secured by props or timbers, and shall see that no person is directed or permitted to work in an unsafe place, unless it be for the purpose of making it safe. He shall also see that the workmen are provided with sufficient props, cap pieces and timbers of suitable size, which shall be delivered at the working faces or as near as they can be conveyed in mine cars, when requested by the workmen in accordance with section seven of this article. He shall also see that props are cut square at both ends and as near as practicable to the proper length as given for the places where they are to be used.

Section 7. Every workman in need of props, cap pieces and timbers shall notify the mine foreman or the assistant mine foreman of the fact at least one day in advance, giving the number, size and length of props, cap pieces and timbers required. In case of emergency the timber may be ordered immediately upon the discovery of danger. If for any reason the necessary timbers cannot be supplied when required, the mine foreman or assistant mine foreman shall instruct the workmen to vacate the place until the timber needed is supplied.

The place and manner of leaving the orders for props, cap pieces and timbers shall be designated and specified in the rules of the mine.

Section 8. The mine foreman shall see that on all hauling roads on which hauling is done by animal power, holes for shelter shall be cut into the strata not less than two and one-half feet deep and four feet wide and level with the road, at least every thirty yards, and kept whitewashed and clear of obstruction. But shelter holes shall not be required in entries from which rooms are driven at regular intervals not exceeding ninety feet, provided that the entrance to each room be kept clear of obstruction for a distance of three feet. On all hauling roads on which hauling is done by machinery, shelter holes shall be cut into the strata not less than two and one-half feet deep and at least four feet wide and level with the road and not more than fifteen yards apart, and said shelter holes shall be kept whitewashed and clear of obstruction. All shelter holes shall be made on the same side of the entry. All entries driven after the

passage of this act shall have a clear space of two and one-half feet from the side of the car to the rib, which shall be made and continued throughout on one side of the entry and kept clear of obstruction, so that the lives of the drivers and runners may not be endangered. No persons except officials or repairmen shall be permitted to travel on slopes, gravity or incline planes while the cars thereon are in motion.

The mine foreman shall see that the entries at such places where the road grades necessitate sprags or brakes to be applied or removed shall have a width clear of refuse of not less than three feet between the top side of the car and the rib, which shall be kept whitewashed and clear of all obstruction, to allow the driver or the trip-rider to pass his trip safely and keep clear of the cars: Provided, That this requirement shall not apply to any parts of mines opened prior to the passage of this act, if deemed impracticable by the inspector.

Section 9. The mine foreman shall direct and see that the coal is properly mined before it is blasted. "Properly mined" shall mean that the coal may be undercut, center-cut, top-cut or sheared by pick or machine. In mines generating explosive gas, when the coal seam is five feet six inches or more in thickness, "properly mined" shall mean that in all entries *and narrow work* less than *ten feet wide wherein the coal is undercut* it shall also be sheared on one side as deep as the undercutting before any holes are charged and fired. He shall also direct that the miner set sprags as often as necessary, at a distance not exceeding seven feet apart, under the breast of undermined or center-mined coal for safety. The mine foreman shall direct at what hours blasting shall be done in the mine and a notice of the time shall be posted at a conspicuous place at the mine, and a copy of the notice shall be kept on file at the mine office: Provided, however, That in mines in which locked safety lamps are used exclusively the mine foreman shall direct that all holes be fired according to the provisions of section fourteen of this article. The mine foreman shall direct and see that the pillars are properly mined by hand pick mining wherever the roof is considered by him to be dangerous.

In every dusty and gaseous mine the mine foreman shall direct and see that the rooms and entries are thoroughly sprinkled with water as often as necessary to keep the dust in damp condition, and he shall direct and see that the dust is loaded and taken out of the mine at least once each week.

The mine foreman shall direct and see that as the miners advance in their excavation all dangerous and doubtful pieces of coal, slate and rock overhead are taken down or at once carefully secured against falling on the workmen. Any workman who neglects to carry out or disobeys the instructions of the mine foreman or his assistant in regard to securing his working place shall be discharged by the mine foreman, and if such negligence or disobedience results in serious injury or loss of life, the mine foreman shall give the name of said workman to the inspector for prosecution in accordance with section two, article twenty-six, of this act.

Section 10. The mine foreman shall give prompt attention to the removal of all dangers reported to him by his assistants, the fire boss or by any other person working in the mine, and he or his assistant

shall once each week travel and examine all the air courses and roads and all the openings that give access to old workings or falls, and make a record of the condition of all places where danger has been found, with ink, in the book provided for that purpose.

In all mines the mine foreman shall employ a sufficient number of assistants to insure a visit to each working place either by himself or by his assistants once each day while the employees are at work, and in addition thereto shall give special care, oversight and attention to the men drawing pillars, particularly when falls are being made. The mine foreman or the assistant mine foreman under instructions from the mine foreman, shall direct that the holes for blasting be properly placed, and shall designate the angle and depth of holes, which shall not be deeper than the undercutting, center-cutting, top-cutting or shearing, and the quantity of explosives required for each hole, and the method of charging and tamping. Instructions shall be given the men by the mine foreman or the assistant mine foreman when, where and how timber shall be placed so as to avoid accidents from falls and also in a general way how to mine coal with safety to themselves and others.

At the end of each shift each assistant mine foreman shall make a report in a book provided for that purpose, giving the general condition of the working places as to safety and shall make a note of any unusual occurrence observed by him during the day. The mine foreman shall read carefully the daily report of each assistant mine foreman and shall sign the reports with ink not later than the day following.

Section 11. Every mine generating explosive gas shall be kept free of standing gas in all working places and roadways. Any accumulation of explosive gas or noxious gases in the worked-out or abandoned parts of any mine shall be removed as soon as possible after its discovery, if it is practicable to remove it. No person who may be endangered, by the presence of said explosive gas or noxious gases shall be allowed in that part of the mine until said gases have been removed. The mine foreman shall direct and see that all dangerous places and the entrance or entrances to worked-out and abandoned places in a gaseous mine are properly fenced off across the openings so that no person can enter, and that danger signals are posted upon said fencing to warn persons of the existing danger.

Section 12. In any mine where it has been found impracticable to remove explosive gas from the inaccessible top of a fall, it shall be the duty of the mine foreman to make this fact known at once in writing to the superintendent, who shall immediately make a personal investigation of the matter. If the superintendent is unable to have said explosive gas removed within reasonable time, he shall order that a bore hole or bore holes, not less than six inches in diameter, be drilled from the surface to a high point on said fall in order to give the gas an opening to escape to the surface. If the said body of gas cannot be removed, the superintendent shall at once instruct the mine foreman to have said gas sealed up by the erection of a wall or walls of sufficient thickness and of incombustible material to prevent the gas from said inaccessible top of a fall escaping into the atmosphere of the mine.

Section 13. In every gaseous mine where coal dust is carried in the atmosphere of the mine in dangerous quantities the mine foreman

shall see that no person is employed to work in the mine until he has given satisfactory proof that he can do the work allotted to him without endangering the lives of his co-employees, unless said person is put to work with an experienced miner.

Section 14. In every dusty mine and in every mine generating explosive gas, in which locked safety lamps are used exclusively, the mine foreman shall employ a sufficient number of competent persons to be known as shot firers. The duty of said shot firers shall be to charge, tamp and fire all holes properly placed by the miners, and to refuse to charge any holes not properly placed. No holes shall be fired by any person other than a shot firer. They shall use none but incombustible material for tamping, which the mine foreman shall see is provided for them at convenient places inside the mine. Under no condition shall the shot firer use coal dust or any other combustible material for tamping. All such holes shall be fired by an electric apparatus. Each shot firer shall keep a record of and report to the mine foreman every hole that he has refused to charge, every blown-out shot and every hole that has misfired.

All holes shall be charged, tamped and fired when the workmen are out of the mine, except the shot-firers and other persons delegated by the mine foreman to safeguard property.

No shot-firer shall fire a shot in any working place if his safety lamp can detect explosive gas at the roof. In dusty mines in which locked safety lamps are used exclusively no holes shall be fired unless the entries are so thoroughly wetted as to prevent the existence of any dry dust for a distance of not less than two hundred feet from the hole to be fired.

Section 15. When operations are temporarily suspended in a mine, the superintendent and the mine foreman shall see that danger signals are placed across the mine entrances, which signals shall be sufficient warning for persons not to enter the mine. If the circulation of air through the mine be stopped, each entrance to said mine shall be securely fenced off and a danger signal displayed upon said fence at each entrance.

Section 16. The mine foreman shall see that all working places are kept as free from water as practicable during working hours.

Section 17. In any working place that is being driven within supposedly dangerous proximity to an abandoned mine or part of an abandoned mine suspected of containing explosive gas or that may contain a dangerous accumulation of water, at least two bore holes shall be maintained not less than twelve feet in advance of the face, and on each side of such working place bore holes of the same depth shall be drilled diagonally not more than eight feet apart, and any place driven to tap water or gas shall not be more than eight feet wide. No water or gas from an abandoned mine or parts of an abandoned mine, and no bore hole from the surface shall be tapped until the employees, except those engaged at such work, are out of the mine, and such work shall be done under the immediate instruction and direction of the mine foreman, with the use of locked safety lamps.

Section 18. The mine foreman shall each day enter plainly and sign with ink in a book provided for that purpose a report of the condition of the mine, which report shall clearly state any danger that may have come under his observation during the day or any

danger reported to him by his assistants, the fire boss, or by others. The report shall also state whether or not there is a proper supply of material on hand for the safe working of the mine, and whether or not the requirements of the law are complied with. He shall also once each week enter plainly with ink in said book a true report of all air measurements required by this act, designating the place, the area of each cut-through separately, the velocity of the air in each cut-through, and the number of men employed in each separate split of air, with the date when measurements were taken. Said book shall at all times be kept in the mine office at the mine for examination by the inspector and by any person working in the mine, in the presence of the mine foreman.

The mine foreman shall also each day read carefully and counter-sign with ink all reports entered in the record book of the fire boss.

Section 19. The mine foreman shall once each week on blank forms provided for that purpose report to the inspector all fatal and serious accidents that have occurred in or about the mines, giving the age, nationality and occupation of the injured persons, together with facts as to the families or dependents affected.

Section 20. The mine foreman shall employ a sufficient number of fire bosses in order that each mine can be examined in accordance with the provisions of sections one, two and three of article four of this act. The mine foreman or the assistant mine foreman shall see as often as practicable that the fire boss has left his mark in places examined or reported as examined.

The mine foreman or the assistant mine foreman shall distribute a sufficient number of danger signals at convenient places in each entry in the mine for the use of the fire bosses whenever it becomes necessary to warn employes to keep out of dangerous parts of the workings.

Section 21. The mine foreman shall direct and see that safety blocks or some other device are constructed for the purpose of preventing cars from falling into the shaft or slope or running away on slopes and incline planes, and safety switches, drop logs or other devices shall be used on all slopes and incline planes, and the mine foreman shall see that said safety blocks, safety switches or other devices are maintained in good working order.

Section 22. It shall be the duty of the mine foreman to see that locked safety lamps are used when and where required by this act.

The transportation of tools in and out of the mine shall be under the direction of the mine foreman.

Section 23. It shall be the duty of the mine foreman to report immediately all the violations of this act to the inspector.

Section 24. Where one or more assistant mine foremen are employed they shall perform the duties of the mine foreman and shall be liable to the same penalties for a violation of this act.

## ARTICLE VI

### Duties of Mine Superintendent. Mine Supplies

Section 1. It shall be the duty of every superintendent, on behalf and at the expense of the operator, to keep on hand at each mine at all times a sufficient quantity of all materials and supplies required

to preserve the health and safety of the employes, especially the supplies ordered by the mine foreman and required by this act. If for any reason the superintendent cannot procure the necessary materials or supplies, as aforesaid, he shall at once notify the mine foreman, whose duty it shall be to withdraw the men from the mine or part of mine until such materials or supplies are received.

The superintendent shall at least once every week read, examine carefully and countersign all reports entered in the mine record book by the mine foreman, and if he finds that the law is being violated in any particular he shall order the mine foreman to stop said violation forthwith.

Section 2. The superintendent shall not obstruct the mine foreman or other officials in the fulfillment of any of their duties as required by this act, but he shall direct that the mine foreman and all the other employes under him comply with the law in all its provisions, especially when his attention is called by the inspector to any violation of the law. At any mine where a superintendent is not employed, the duties that are herein prescribed for the superintendent shall devolve upon the mine foreman in addition to his regular duties.

Section 3. The superintendent of every mine shall provide a sufficient number of danger signals, upon request of the mine foreman, which the mine foreman or the assistant mine foreman shall distribute in the mine at places convenient for the use of the fire bosses in the fulfillment of their duties. Danger signals in all mines shall be uniform and of a design approved by the Chief of the Department of Mines. All danger signals shall be kept in good condition and no defective signal shall be allowed to remain in any mine.

Section 4. The superintendent shall keep on hand at the mine a supply of the printed rules and notices and record books required by this act, which shall be furnished through the inspector of the district on request of the superintendent in writing. The superintendent shall see that said rules and notices and record books are delivered to the proper persons at the mine and that they are properly cared for, and he shall also see that the rules and notices are posted in conspicuous places at or near the entrance to the mine and kept in such condition that they will always be legible.

Section 5. The superintendent shall not permit the mining of coal within fifty feet of any abandoned mine containing a dangerous accumulation of water, until said danger has been removed by driving a passageway to tap and drain off said water, as provided for in this act: Provided, That the thickness of the barrier pillars shall be greater and shall be in proportion of one foot of pillar thickness to each one and one-quarter feet of water-head, if in the judgment of the engineer of the property and that of the district inspector it is necessary for the safety of the persons working in the mine.

Section 6. The superintendent shall provide a safety catch or other device to be placed on the rear car of full trips that are being hoisted up slopes, except where an approved hoisting apparatus makes the safety catch unnecessary, and he shall also provide suitable signals to be placed on the rear end of the rear car of all trips hauled by locomotives of any kind in the mine.

Section 7. If either the mine foreman or the fire boss neglects his duties or incapacitates himself by drunkenness or is incapaci-

tated by any other cause for the proper performance of his duties, and information thereof shall be brought to the knowledge of the superintendent, it shall be the duty of the superintendent to make a thorough investigation of the case, and, if he finds evidence to sustain the charge, he shall inform the inspector, who shall inform the court of common pleas of the county or a judge thereof by petition, and said court, or judge when the court is not in session, shall issue a citation in the name of the Commonwealth to the said mine foreman or fire boss to appear at not less than five days' notice, upon a day fixed, before said court or a judge thereof, at which time the court shall proceed to inquire into and investigate the allegations. If the court finds the allegations to be true, it shall notify the Department of Mines of such finding and instruct said Department to withdraw the certificate of said delinquent: Provided, however, That he shall have the right to appear before the Examining Board and be re-examined, and if he can satisfy the Board that he has reformed and passes a satisfactory examination, he shall be given another certificate of qualification. When the court orders the certificate of a mine foreman or a fire boss to be withdrawn, the inspector shall notify the operators of the district of the fact.

Section 8. The operator or the superintendent of every mine shall within thirty days send to the inspector the following notices:

First. When a mine has been abandoned or the working thereof discontinued.

Second. When any work has commenced for the purpose of opening a new mine.

Third. When the working of a mine is resumed after an abandonment or discontinuance for a period exceeding two months.

Fourth. When any change occurs in the name of a mine or in the name of the operator of a mine under the provisions of this act.

## ARTICLE VII

### Ventilation

Section 1. The operator or the superintendent of every mine shall provide and maintain ample means of ventilation to furnish a constant and adequate supply of pure air for the employes. In a non-gaseous mine the minimum quantity of air shall not be less than one hundred and fifty cubic feet per minute for each person employed. In a mine generating explosive gas in such quantities that it can be detected by an approved safety lamp, the minimum quantity of air shall not be less than two hundred and fifty cubic feet per minute for each person employed. The quantity of air demanded in the various mines shall be computed by actual measurements taken in the first entry cut-through beyond the last room turned in the entry or entries. The return air from each split where from sixty to eighty-five persons are employed shall be conducted by an overcast or an undercast into the return airway, which shall lead to the main outlet.

If, after the inspection of any mine, the inspector is of the opinion that more air is necessary than is provided for in this section to insure the health and safety of the employes, it shall be his duty to demand as much more air as may be necessary: Provided, however,

that in case of difference of opinion between the inspector and the mine foreman as to the quantity of air necessary, the inspector shall refer the matter to the Chief of the Department of Mines, who shall at once order two or more inspectors to accompany the inspector of the district to make further inspection of said mine, and if the said inspectors shall be agreed in the opinion that the additional quantity of air is necessary to insure the health and safety of the employes, they shall notify the superintendent of the mine of that fact in writing, and the decision of the inspectors shall be final unless the said superintendent or inspector shall within seven days from the date thereof appeal from such decision to the *court of quarter sessions*. *If such an appeal shall be taken, like proceedings shall be taken as are provided in case of an appeal to the court under section three of article eight.*

The ventilation shall be conducted through the main entries, cross entries and to the working faces of all working places in the mine in sufficient quantities to dilute, carry off and render harmless the smoke and the noxious and dangerous gases generated therein, to such an extent that all working places and traveling roads shall be in a safe and healthy condition for the persons working and traveling therein.

No permanent door shall be erected or allowed to remain in the main entry in any mine, *unless its removal shall be deemed impracticable by the inspector.*

Section 2. Where five or more persons are employed at any one time in a mine it shall be the duty of the operator or the superintendent to provide a fan or a furnace of ample power to ventilate the mine according to the requirements of section one of this article: Provided, That it shall not be lawful to use a furnace for ventilating any mine wherein explosive gas is being generated.

Six months after the passage of this act not more than sixty persons shall be permitted to work in the same continuous air current, unless in the judgment of the inspector of the district and of two other inspectors it is impracticable to comply with this requirement; in which case a larger number, not exceeding eighty-five persons, may be permitted to work therein.

Section 3. The first cut-through in the first room in any entry shall not be more than fifty feet from the rib of the entry; the first cut-through in the second room shall not be more than eighty feet from the rib of the entry; and subsequent first cut-throughs in all the rooms shall not be more than fifty and eighty feet, respectively, from the rib of the entry. Additional cut-throughs shall not be more than sixty feet apart. This rule for distances of cut-throughs shall not be changed except with the consent of the inspector of the district.

Doors, check doors or brattices, made of boards, canvas, brattice cloth or any other suitable material, shall be erected at points where needed, so as to force the air current to the working faces of all rooms and entries.

Section 4. The quantity of air passing a given point shall be ascertained by an anemometer, the measurements to be taken by the mine foreman once every week at or near the main inlet and outlet airway in the mine and at the last cut-through in the last room and

at the first entry cut-through beyond the last room turned in each entry. Said measurements shall be taken on days when the men are at work.

Section 5. In all mines all stoppings in cut-throughs between the main intake and return airways shall be substantially built of masonry, concrete or other incombustible material and shall be of ample strength; and in gaseous mines all new stoppings and renewals of old stoppings in cross entries shall be built of masonry, concrete or other incombustible material. Stoppings in cross entries in non-gaseous mines may be built of timber. All stoppings shall be kept in good condition, so as to keep the air up to the working faces. Temporary stoppings shall be erected in cut-throughs in rooms to conduct the ventilation to the face of each room.

Section 6. Every ventilating fan at non-gaseous mines shall be kept in operation continuously day and night, unless operations are indefinitely suspended, except when written permission is given by the inspector to stop it. The said permission or a copy thereof shall be posted by the mine foreman in a conspicuous place at the entrance or entrances to the mine and shall state the particular hours the fan may be stopped. The inspector shall have the power to withdraw or modify such permission at any time and in any manner he may deem best. In all cases, however, the fan shall be started three hours before the time to begin work. Every ventilating fan at gaseous mines shall be kept in operation continuously day and night, unless operations are indefinitely suspended, except when written permission is given by the inspector to stop it. The said permission shall be in the form of a printed notice stating at what hours the fan will be stopped and the time it will again be set in motion. Said notice shall be posted by the mine foreman in a conspicuous place at the entrance to the mine: Provided, That should it at any time become necessary to stop a fan on account of accident to part of the machinery connected therewith, or by reason of any other unavoidable cause, it shall then be the duty of the mine foreman or the assistant mine foreman in charge, after first having provided for the safety of the persons employed in the mine, to order said fan stopped for necessary repairs.

Every ventilating fan shall be provided with a recording instrument by which the number of revolutions or the effective ventilating pressure of the fan shall be registered for each hour, and the registration for each day, with the date thereof, shall be kept in the office at the mine for future reference for one year.

No main or principal ventilating fan shall be placed inside of any mine. No auxiliary fan, unless driven by electricity or compressed air, shall be placed in any mine. If the fan be electrically driven, the motor shall be placed in the intake airway.

Every ventilating furnace in a mine shall be properly attended to and operated by a competent person employed by the mine foreman for that purpose for three hours before the appointed time to begin work and constantly thereafter during working hours.

Section 7. In every mine generating explosive gas in sufficient quantities to be detected by an approved safety lamp, all air bridges, overcasts or undercasts shall be substantially built of masonry, concrete or other incombustible material of ample strength, or shall be driven through the solid strata. It shall be the duty of the mine

foreman to see that these bridges are properly built and are of ample strength.

Section 8. In every mine the doors used for guiding and directing the ventilation shall be so hung and adjusted that they will close of themselves, or shall be supplied with springs or pulleys so that they cannot remain open. All principal doors shall be so placed that when one door is open another, which has the same effect upon the same current, shall be closed and remain closed to prevent any stoppage of the air current. An attendant shall be employed at each principal door (that is, the door that controls the main air current in the entries) through which cars are hauled for the purpose of opening and closing it for the employes and cars to pass in and out from the workings, unless a self-acting door, approved by the inspector, is used. A hole for shelter shall be provided at each door to protect the attendant from danger from cars while performing his duties. Persons employed for this purpose shall remain at the doors at all times during working hours: Provided, That the same attendant may attend two doors where the distance between the two doors is not more than one hundred feet, if his absence from the first door does not endanger the safety of the employes. In all gaseous mines attendants shall not leave their doors at quitting time until they are notified by the mine foreman, or by some person designated by him, that all the employes in the section of the mine in which they are employed have left their work. At every door on any incline plane or road whereon haulage is done by machinery, an attendant shall always be on duty during working hours, and at every door on said plane or road an extra door shall be provided for use in case of necessity. Wherever a principal door is placed an extra door shall also be provided to be used in case of necessity.

Section 9. No product of petroleum or alcohol or any compound that in the opinion of the inspector will contaminate the air to such an extent as to be injurious to the health of the miner, shall be used as motive power in any mine.

## ARTICLE VIII

### Locked Safety Lamps and Open Lights; Defining When Either or Both Can Be Used

Section 1. The use of open lights is prohibited in any entry, airway, traveling way, room or any other working place where explosive gas is being generated in such quantity as can be detected by an approved safety lamp, also in pillar workings where a sudden inflow of explosive gas is likely to be encountered, and all such places shall be worked exclusively with locked safety lamps. The use of open lights is also prohibited in all working places, roadways or other parts of the mine through which explosive gas might be carried in the air current in quantities indicating danger: Provided, however, that if the inspector is of the opinion that any mine or any section of any mine should be operated by the use of locked safety lamps exclusively, he shall have the right to petition the Chief of the Department of Mines in writing, setting forth such opinion and his reasons therefor. Whereupon the said Chief shall forthwith instruct two other inspectors to accompany the inspector of the district to make a

thorough examination of all workings of said mine, whether in active operation or not. The said committee of inspectors shall, within seven days of their appointment, make a report in writing to the Chief of the Department of Mines and to the superintendent, general manager, operator or owner of said mine, giving the conclusions arrived at with their reasons therefor, and the decision of said committee shall be final and conclusive, unless the superintendent, general manager, operator or owner shall within seven days of the date thereof appeal from such decision to the court of quarter sessions of the county in which the mine is located. If an appeal is made, the court shall then appoint two practical, reputable and competent persons, one of whom shall be recommended by the superintendent, general manager, operator or owner, and the other by the Chief of the Department of Mines, and the two persons thus recommended shall name a third person, who also must be practical, reputable and equally competent: *Provided, however, in case either or both of said persons are not recommended by a writing filed in said court within ten days after the appeal is filed, that then the said court shall fill the vacancy or vacancies by the appointment of a practical, reputable and competent person or persons; and in case the two persons thus chosen shall not agree in writing upon the third person of this committee within five days after they shall have received notice of their appointment, then the said court shall appoint the said third person on this committee.* The duty of this committee of three persons shall be, under the instruction of the court, to forthwith examine said mine or part thereof and report under oath within ten days after their appointment the facts as they exist or did exist, and their report shall be final and conclusive, unless exceptions thereto shall be filed by the superintendent, general manager, operator, owner or inspectors within seven days of the filing of the said committee's report. If exceptions are filed, the court shall at once hear and determine them.

Section 2. If the court finally sustains the decision of the inspectors, then the appellant shall pay all costs of such proceedings; but if the court shall sustain the decision of the committee named by the court, then all costs shall be paid by the county: *Provided, however, that no appeal from any decision made by the committee of inspectors, which can be immediately complied with, shall work as a supersedeas to such decisions during the pendency of such appeal, but all decisions shall be in full force until reversed or modified by the court; Provided, further, that if the report of the committee named by the court favors the use of open lights in said mine or any part thereof, the inspector of the district shall have the right at the expiration of ninety days to request the Chief of the Department of Mines to appoint a committee of four other inspectors, if he, the inspector, is still of the opinion that the continued use of open lights is a menace to the lives of the employes and is endangering property.* The said committee shall be appointed as the first committee of inspectors was appointed and shall examine into the matter in dispute and make a report in the same manner as the first committee, and said report shall be final and conclusive and shall be forthwith complied with and enforced by the superintendent and mine foreman, unless the superintendent, general manager, operator

or owner shall within seven days of the date thereof appeal from such decision to the court of quarter sessions of the county in which the mine is located.

Section 3. And in case of appeal the said court shall then appoint four practical, reputable and competent persons, two of whom shall be recommended by the Chief of the Department of Mines and two by the superintendent, general manager, operator or owner of the mine, and the four persons thus selected shall name the fifth person, who also must be practical, reputable and equally competent: *Provided, however, in case any or all of said four persons are not recommended by a writing filed in said court within ten days after the appeal is filed, that then the said court shall fill the vacancy or vacancies by the appointment of a practical, reputable and competent person or persons; and in case the four persons thus chosen shall not agree in writing upon the fifth person of this committee within five days after they shall have received notice of their appointment, then the said court shall appoint the said fifth person on this committee.* The duty of this committee of five persons shall be, under the instructions of said court, to forthwith examine said mine and report within ten days of their appointment, under oath, the facts as they exist or did exist, and the said report shall be absolute and final, unless exceptions thereto shall be filed by the superintendent, general manager, operator, owner or inspector within seven days after the filing thereof.

If exceptions are filed, the court shall at once hear and determine them: *Provided, that the superintendent, general manager, operator or owner of the mine or the inspector shall have the right to have the record and proceedings removed to the superior court for review by appeal or writ of error.*

The cost of such proceedings shall be paid as heretofore provided for in section two of this article.

Section 4. The use of open lights is strictly prohibited in any section of a mine that is ventilated by the same continuous air current that ventilates any other section in which locked safety lamps are used.

Section 5. If at any time one section of a mine is worked by the use of locked safety lamps while another section is worked by the use of open lights, the return air from the gaseous section shall be conducted directly into a return airway leading to the fan or to the outlet: *Provided, that when a section of a mine is worked by the use of locked safety lamps, it shall be the duty of the mine foreman to provide a suitable danger station with an attendant on duty at all times during working hours, day and night, whose duty it shall be to see that the employes from the open light section are not allowed to enter the locked safety lamp section, unless they are provided with locked safety lamps by said attendant.*

Section 6. The employes of a gaseous mine or any part thereof are strictly prohibited from traveling into or out of the mine in the return air current, if explosive gas can be detected by an approved safety lamp in said air current.

Section 7. When safety lamps are used the position of the lamp station for lighting or relighting shall not be in the return air current.

Section 8. Nothing in this article shall interfere with the discretionary powers of inspectors as provided for in article twenty-one.

## ARTICLE IX

Special Rules for the Installation and Use of Electricity.

The following rules shall be observed as far as is reasonably practicable in the mines:

### DEFINITIONS

The expression "pressure" means the difference of electrical potential between any two conductors through which a supply of energy is given, or between any part of either conductor and earth as read by a volt-meter, and,

(a) Where the conditions of the system are such that the pressure at the terminals where the electricity is generated cannot exceed three hundred volts, this shall be deemed a low pressure system;

(b) Where the conditions of the system are such that the pressure at the terminals where the electricity is generated between any two conductors, or between one conductor and earth, may at any time exceed three hundred volts, but cannot exceed six hundred volts, this shall be deemed a medium pressure system;

(c) Where the conditions of the system are such that the pressure at the terminals where the electricity is generated between any two conductors, or between one conductor and earth, may at any time exceed six hundred volts, this shall be deemed a high pressure system.

The expression "the minimum" signifies the least reasonably possible to be attained by the proper use of the means from time to time known and available, so as to secure safety with efficiency.

### SECTION I

Rule 1. All electrical apparatus and conductors shall be sufficient in size and capacity for the work they may be called upon to do and so installed, worked, maintained and safeguarded as to reduce the danger from accidental shock or fire or overheating to the minimum, and shall be of such construction and so worked that the rise in temperature caused by ordinary working will not injure the insulating materials.

In any mine or any part of a mine where safety lamps are used, the covering of motors or cables shall be so constructed that there is no danger of firing gas by sparking or flashing that may occur during the normal or abnormal working of the apparatus.

All metallic coverings or armoring of cables, and the frames and bedplates of generators, transformers and motors other than portable motors, shall be efficiently grounded, if the pressure at the terminals where the electricity is used exceeds the limits of low pressure.

Rule 2. Where a medium pressure system is used for power purposes or for arc or incandescent lamps, the conductors that form the connection to the motors, transformers or lamps or are otherwise used in connection with the system, shall be completely enclosed in a strong armoring or metal casing, or they shall be fixed at such a distance apart or in such a manner that danger from fire or shock

shall be reduced to the minimum. This rule shall not apply to trailing cables, which are dealt with under rules twenty-seven to thirty-two.

Rule 3. Motors of coal-cutting and other portable machines shall not be used at a pressure higher than a medium pressure.

Rule 4. A higher pressure than a medium pressure shall not be used under ground, except for transmission or for application to transformers or other apparatus in which the whole of the high pressure circuit is stationary.

All high pressure machines, apparatus and lines shall be so marked by the use of the word "Danger" at frequent intervals, or by red paint properly renewed when necessary, or in some other conspicuous manner, as to indicate clearly that they are high pressure and dangerous.

For work under ground, when furnished with current at a pressure higher than medium pressure, a transformer shall not be of less normal rating than five kilowatts, nor shall a motor be of less normal rating than twenty brake horse-power.

Rule 5. In any mine or any part of a mine where safety lamps are used a higher pressure than a medium pressure shall not be transmitted beyond the last cut-through of the intake entries, and all motors, transformers and other apparatus connected with such high pressure system must be placed in suitable chambers, ventilated by intake air.

Rule 6. In every completely insulated circuit, ground detectors shall be kept connected in every generating station, to show immediately any defect in the insulation of the system. These instruments shall be inspected daily by a competent person, or an automatic recording instrument shall be used.

Rule 7. Main and distribution switch and fuse boards in the mine shall be made of incombustible insulating material such as marble or slate, free from metallic veins, and be fixed in as dry a situation as practicable.

Rule 8. No repairing of the live parts of any electrical apparatus, except cleaning or oiling, shall be done when the current is on.

Where the live parts of switches or machines working at a pressure exceeding the limits of low pressure may have to be handled for the purpose of adjustment, or for such wiping or oiling, insulating gloves or mats of India rubber or other suitable material shall be supplied by the operator and shall be used by the attendants.

Rule 9. At every gaseous mine where electricity is used below ground for power, there shall be employed a competent mine electrician, who shall be subject to the authority of the mine foreman and superintendent, and who shall have full charge of all electrical machinery and apparatus in the mine. The mine electrician or an assistant mine electrician shall be on duty at the mine when the electrical apparatus or machinery in use for the production of coal requires more than twenty-five horse power.

After the expiration of twelve months from the passage of this act no person shall be allowed to act as a mine electrician or as an assistant mine electrician in a gaseous mine unless he is the holder of a certificate of competency issued by the Department of Mines.

Every person appointed to operate any electrical apparatus in a mine shall first be instructed in his duty by the electrician or mine foreman.

Rule 10. Fire buckets filled with clean dry sand shall be kept in the mines where stationary electrical apparatus is located, ready for immediate use.

Rule 11. Instructions shall be posted at the mine entrance and in every generating, transforming and motor house, for the resuscitation of persons suffering from electric shock. All employes working in connection with the electrical apparatus shall be required to acquaint themselves with these instructions.

Rule 12. A plan on a scale not smaller than two hundred feet to the inch shall be kept at the mine showing the position of all permanent electrical machinery and fixed cables or conductors in the mine, and it shall be corrected as often as may be necessary to keep it as nearly as practicable up to date, and it shall never be more than three months in arrears. Such plan shall, so far as is consistent with this rule, be subject to the same conditions as are provided by article one of this act in relation to the plan therein mentioned.

Rule 13. Every personal accident occurring in connection with the operation of electrical equipment shall be promptly reported by the person injured, or by some other person on his behalf, to the mine foreman, who shall record it at the office of the mine.

Rule 14. In the event of a break-down of, or damage or injury to, any portion of the electrical equipment in a gaseous mine, or of overheating or of the appearance of sparks or arcs outside of enclosing casings, or in the event of any portion of the equipment (not being a proper part of the electrical circuit) becoming alive, every such occurrence shall be promptly reported to the mine foreman.

## SECTION II

### Generating Stations and Machine Rooms

Rule 15. When the generating station under the control of the owner or superintendent of the mine is not within five hundred feet of the mine entrance, a switch box or boxes efficiently enclosed and locked, or a locked switch house, shall be provided near the mine entrance for cutting off the supply of electricity to the mine.

Rule 16. All terminals and live metal on machines, over medium pressure above the ground and over low pressure under ground, shall, when practicable, be protected with insulating covers or with metal covers connected to earth.

Rule 17. If the transmission lines from the generating station to the mine are overhead and exceed five hundred feet in length, there shall be lightning arresters in connection therewith at the mine entrance.

## SECTION III

### Cables

Rule 18. All high pressure wires used inside of the mines shall be in the form of insulated lead-covered or armored conductors, subject to insulation tests and with carrying capacity according to the rules of the American Institute of Electrical Engineers.

Except in gaseous mines, all medium or low pressure conductors may be bare or with high class insulation. If bare wire is used, all

feed wires must be shielded and properly protected at all points where there is danger of men or animals coming into contact with them. In gaseous mines where locked safety lamps are used, no bare conductors shall be used in rooms or in room entries or beyond the last cut-through in other intake entries.

Rule 19. The size of the conductor (except in the case of overhead wires upon the surface) shall be determined in accordance with the table showing maximum current for copper conductors, as designated by table prepared by the American Institute of Electrical Engineers.

Rule 20. One side of all grounded circuits must be efficiently insulated from earth.

Where lead-covered or armored cable is used the lead or armor shall be earthed and shall be electrically continuous throughout.

Rule 21. The exposed ends of cables where they enter the terminals of switches, fuses and other appliances shall be properly protected and finished off so that moisture cannot creep along the insulating material within the waterproof sheath, or the insulating material, if of an oily nature, leak out of the cable.

Rule 22. All joints must be mechanically and electrically efficient and, where practicable, must be suitably soldered.

Rule 23. Overhead bare wires on the surface shall be properly secured to insulators and clear of any traffic and provided with lightning arresters.

Rule 24. In any mine or any part of a mine where safety lamps are used the main cables shall be taken into the mine by way only of an intake airway.

Rule 25. All cables used in shafts must be highly insulated and substantially fixed. Shaft cables not capable of sustaining their own weight shall be properly supported at intervals varying according to the weight of the cable. Where the cables are not completely boxed in and protected from falling material, space shall be left between them and the side of the shaft that they may yield and thus lessen a blow given by falling material.

Rule 26. When the cables in main haulage roads, where persons are hauled into or out of the mines, cannot be kept at least one foot from any part of the car, they shall be specially protected.

Cables and wires, unless provided with metallic coverings, shall not be fixed to walls or timbers by means of uninsulated fastenings.

Cables under ground, when suspended, shall be supported flexibly in such a manner as to allow of their readily breaking away when struck before the cables themselves can be seriously damaged.

When main or other roads are being repaired or blasting is being done, temporary protection must be used so that the cables are protected from damage, and cables must be inspected after such work is completed before current is applied.

Rule 27. Trailing cables for portable machines shall be specially flexible, heavily insulated and protected with extra stout braiding hose pipes or other equally effective covering.

Rule 28. The joints, if any, made in trailing cables, shall be soldered. Clamps of any kind must not be used for this purpose.

Rule 29. The two cables of the twin trailing cable shall be divided at the motor and only for such a length as is necessary for the

making of connection to the motor, and the twin cable with its outer covering complete shall be securely held by a suitable clamp on the motor frame in such a manner as to protect the trailing cable from injury and to prevent any mechanical strain being borne by the single ends making electrical connection with the motor.

Rule 30. In the event of the trailing cable in service breaking down or being damaged in any way, or of its inflicting a shock upon any person, it shall be at once put out of service and another cable shall be substituted therefor. The faulty cable shall not be used again until it has been repaired and tested by the mine electrician.

Rule 31. In gaseous mines each trailing cable in use shall be examined daily by the machine boss for abrasions and other defects.

The machineman shall also be required to observe carefully the trailing cable while in use, in order to detect defects, and in the event of any defect becoming apparent notice of the same shall at once be given to the mine electrician or the assistant mine electrician.

Rule 32. The trailing cable shall be kept disconnected from the machine while it is being loaded on to or unloaded from the truck, unless the construction of the machine is such that the electric power is necessary for its unloading or reloading. Rules twenty-seven, twenty-eight, twenty-nine, thirty, thirty-one and thirty-two do not apply to electric gathering locomotives.

## SECTION IV

### Fuses, Circuit-Breakers and Switches

Rule 33. Fuses and automatic circuit-breakers shall be so constructed as to open the circuit when the current through them exceeds by one hundred per centum the working current in the case of motors or the permissible current of the cables which these devices protect. Fuses shall be stamped or marked or shall have a label attached indicating the current at which they are intended to fuse, or where fuse wire is used each coil in use shall be so stamped and labeled. Fuses shall only be adjusted or replaced by a competent person authorized by the mine foreman, except in case of coal-cutting machines and electric locomotives, when the machine runners and motormen shall be permitted to adjust or replace them.

Rule 34. All switches, circuit-breakers and fuses must have in combustible bases of marble, slate or porcelain or other suitable incombustible insulating material.

Rule 35. All points at which a circuit (other than those for signals or portable motors) has to be made or broken shall be fitted with proper switches. In any mine or any part of a mine where safety lamps are used the use of hooks or other makeshifts is prohibited, and switches, circuit-breakers and fuses (except as provided for in rule forty-one hereafter) shall not be of the open type, but must either be enclosed in gas-tight boxes or break under oil.

## SECTION V

### Motors

Rule 36. Every stationary underground motor, together with its starting resistance, shall be protected by a fuse or circuit-breaking device in accordance with rule thirty-four, and by switches capable

of entirely cutting off the pressure. The switches shall be fixed in a convenient position near the motor, and every stationary motor of one hundred brake horse power, or over, under ground, shall be provided with a suitable meter to indicate the load on the machine.

In any mine or any part of a mine where safety lamps are used, all mining machines with their cables shall be protected against overloads or excessive currents by a completely enclosed and flame-proof fuse.

Rule 37. Where unarmored cables or wires pass through metal frames or into boxes or motor casings, the holes shall be substantially bushed with insulating collars and where necessary with gas-tight bushings that cannot readily become displaced.

Rule 38. The terminal of connections or cables for portable motors shall be securely attached to the machine.

Rule 39. When the insulation of a motor is found to become damp during a stoppage, suitable steps shall be taken to insure that the insulation shall be dry before the working of the motor is resumed.

Rule 40. In any mine or any part of a mine where safety lamps are used, or in any working place where only safety lamps are used, all motors, unless placed in such rooms as are separately ventilated with intake air, shall have all their current-carrying parts, also their switches, starters, terminals and connections, completely enclosed in such a manner as to prevent the escape of sparks or flame into the gaseous atmosphere, the enclosures to be made of incombustible material and of sufficient strength to escape damage in the event of an explosion of fire-damp occurring in the motor, and such enclosures shall not be opened except by an authorized person and then only when the current is switched off. The pressure shall not be switched on or off while the enclosures are open.

Rule 41. In any mine or any part of a mine where safety lamps are used, a safety lamp or other suitable apparatus for the detection of explosive gas shall be provided for the use of the attendant of stationary electrical apparatus; and should any indication of explosive gas appear on the flame of the safety lamp or other apparatus used, the person in charge shall immediately stop the machine, cut off the current at the nearest switch and report the matter to the mine foreman.

Rule 42. The mine foreman shall not place a man in charge of a coal-cutting machine in a gaseous mine who is not a competent person capable of determining the safety of the roof and sides and detecting the presence of explosive gas.

Rule 43. In any mine or any part of a mine where safety lamps are used, before a coal-cutting machine is brought within twenty yards of the working face, the machine-man shall make an inspection for gas in the place where the machine is to work, unless such an examination is then made by some other competent person authorized or appointed for that purpose by the mine foreman. If any explosive gas is found in the place, the machine shall not enter therein.

No coal-cutting machine shall be continued in operation for a longer period than half an hour without an examination as above described being made for gas, and if gas is found the current shall at once be switched off the machine and the trailing cable shall forthwith be disconnected from the feed wire.

The person finding the gas shall at once erect a danger signal to warn persons against entering the place. The trailing cable shall be removed from such place, and shall not be brought back, nor shall the machine be again started in such place until the fire boss or a person duly authorized by the mine foreman has examined it and has pronounced it free from gas and has removed the danger board.

The person finding gas shall forthwith report the same to the mine foreman and at the end of the shift he shall make and sign a written report in a book kept at the mine for the purpose.

Rule 44. In order that the roof may be carefully examined, no coal-cutter motor shall be kept continuously at work for a length of time exceeding half an hour.

Rule 45. The person in charge of a coal-cutting or drilling machine shall not leave the machine while it is working, and shall before leaving the working place see that the pressure is off from the trailing cables. No repairs shall be made to any portable machine until the pressure has been cut off.

Rule 46. In gaseous mines where locked safety lamps are used if any sparks or arcs appear outside the casing of a coal-cutting or other portable motor or about the cables or rails, the machine shall be stopped and shall not be worked again until the defect has been repaired, and the occurrence shall be reported to the mine foreman or to the assistant mine foreman.

Rule 47. All enclosed motors used under ground shall be opened and inspected by the mine electrician or his assistant at least once a week, and when necessary shall then be cleaned and repaired. Enclosed switches shall be opened and inspected at least once every month.

## SECTION VI

### Electric Locomotives

Rule 48. Electrical haulage by locomotives on the trolley wire system shall not be allowed in that part of a mine where locked safety lamps are used, except in intake entries.

Rule 49. In underground roads the trolley wire shall be sufficiently guarded, or the pressure must be cut off from the wires at all times when such roads are used for traveling on foot. The hours during which traveling on foot therein is permitted shall be clearly indicated by notices and signals placed in conspicuous positions at the ends of and at all entrances into the roads. At other times no one except a duly authorized person shall be permitted to travel on foot along such roads.

Rule 50. On underground roads the trolley wires shall be placed as close to the side and as near in a straight line as practicable and securely supported at frequent intervals. On any part of the trolley system, where it is necessary for men to cross under trolley, it shall be so guarded that the possibility of contact will be reduced to a minimum, and lights shall be placed at all such crossings.

At all landings, turnouts, partings and other places, where men are required to work near or pass under the wire, a suitable protection shall be placed. This protection may consist of channeling the roof, placing boards along the wire which shall extend three inches below, or the use of other approved devices that afford protection, or the wire may be placed six feet above the top of the rail. All branch trolley

lines shall be fitted with an automatic trolley switch or section insulator and line switch, or some other device that will allow the current to be shut off from such branch headings. Lights shall be placed along the branch headings to indicate when the power is on.

Rule 51. It is recommended that where air or water pipes parallel the grounded return of power circuits, the return be securely bonded at frequent intervals to such pipes, to eliminate the possibility of a difference of potential between rails and pipes and to prevent electrolysis of the pipes. The rail return shall be of sufficient capacity for the current used independent of the capacity of the pipes.

Rule 52. If storage battery locomotives are employed in any mine or part of a mine where safety lamps are used, the rules applying to motors in such places shall also be deemed to apply to the boxes containing the cells.

## SECTION VII

### Electric Lighting

Rule 53. Arc lamps used under ground shall be so guarded as to prevent pieces of heated carbon falling from them, and they shall not be used in places where there is likely to be danger from the presence of coal dust. They shall be so screened as to prevent risk of contact with persons.

Rule 54. Small wires for lighting circuits shall either be conveyed in pipes or casings, or they may be suspended from porcelain insulators or securely tied to them, so that they do not touch any timbering, coal or metal. On no account shall staples be used. If metallic pipes are used, they must be electrically continuous and grounded. If separate uncased wires are used, they shall be kept at least three inches apart and not brought together, except at lamps or switches or fittings.

Rule 55. In any mine or any part of a mine where safety lamps are used, electric lamps, if installed, must be of the vacuum or enclosed type, and they shall be protected by gas-tight fittings of strong glass, and shall have no flexible cord connections. Electric lamps shall be replaced by a competent person only.

Rule 56. In gaseous mines, in all machine rooms and other places under ground where a failure of electric light is likely to cause danger, some safety lamps or other proper lights, not fewer than a number to be prescribed for such place by the inspector, shall be kept for use in the event of such failure.

## SECTION VIII

### Shot-Firing

Rule 57. Electricity from lighting or power cables shall not be used for firing shots.

Rule 58. When shot-firing cables or wires are used in the vicinity of power or lighting cables, sufficient precautions shall be taken to prevent the shot-firing cables or wires from coming into contact with the lighting or power cables.

Rule 59. In gaseous mines only competent persons who have been properly instructed in the work and duly authorized in writing shall be allowed to fire shots electrically in any part of a mine.

Rule 60. The exploder, fuses and wires shall be suitable for the conditions under which the blasting is carried out and shall be of an approved type.

Rule 61. High tension magneto-generators shall be enclosed in flame-tight cases when employed in any mine or any part of a mine where safety lamps are used.

Rule 62. A primary or secondary battery when used for shot-firing shall be enclosed in a suitably constructed box fitted with a removable connecting plug or key, without which the circuit cannot be closed. This plug or key shall be detached when not required for firing and shall not under any conditions pass from the personal custody of the shot-firer while on duty. Such batteries shall be frequently tested by the shot-firer to insure that they give the necessary pressure and current.

Rule 63. The exploder shall be in the charge of the shot-firer and shall be fitted with a handle or key, which shall be detached when not required for firing, and shall not under any conditions pass from the personal custody of the shot-firer while on duty.

Rule 64. The exploder shall not be connected to the shot-firing cable until all other steps preparatory to the firing of the shot have been completed and all persons have removed to a position of safety.

Immediately after the firing of the shot the firing cable shall be disconnected from the exploder and no person shall approach a shot that has been attempted to be fired by electricity and has failed to explode until the firing cable has been so disconnected and an interval of five minutes has elapsed since the last attempt to fire the shot.

The foregoing rules shall not apply to apparatus used for telephone, telegraph and signal purposes, which are provided for by the three following rules:

## SECTION IX

### Signaling

Rule 65. All proper precautions must be taken to prevent electric signal and telephone wires from coming into contact with other electric conductors, whether insulated or not.

Rule 66. Bells, wires, insulators, contact-makers and other apparatus used in connection with electric signals under ground shall be of substantial and reliable description and shall be erected in such a manner as to reduce the liability to failures or false signals to the minimum.

Rule 67. In any mine or any part of a mine where safety lamps are used, the pressure employed for signaling purposes shall not in any one circuit exceed fifty volts in an intake airway or twenty volts elsewhere, and bare wires shall not be used for such purposes, except in haulage roads.

## SECTION X

## Electric Re-Lighting of Safety Lamps

Rule 68. If in any mine or part of a mine in which safety lamps are used they are relighted under ground by electricity, the mine foreman shall select a suitable station or stations, not being in the return airway and where there is not likely to be any accumulation of inflammable gas, and no electric relighting apparatus shall be used in any other place. All electric relighting apparatus shall be securely locked and shall not be available for use except by persons authorized by the mine foreman to relight safety lamps, and such persons shall examine all safety lamps brought for relighting before they are re-issued.

## ARTICLE X

## Opening for Drainage, Et Cetera, on Other Lands

Section 1. If any person, firm or corporation is or shall hereafter be seized in his or their own right of coal lands, or shall hold such lands under lease and shall have opened or shall desire to open a coal mine on said land, and it shall not be practicable to drain or ventilate such mines or to comply with the requirements of this act as to ways of ingress and egress or traveling ways by means of openings on lands owned or held under lease by him, them or it, and the same can be done by means of openings on adjacent lands, he, they or it may apply by petition to the court of quarter sessions of the proper county, after ten days notice to the owner or owners, their agents or attorney, setting forth the facts under oath or affirmation, particularly describing the place or places where such opening or openings can be made, and the pillars of coal or other material necessary for the support of such passageway and the right of way necessary to any public road as may be needed in connection with such opening, and that he or they cannot agree with the owner or owners of the land as to the amount to be paid for the privilege of making such opening or openings; whereupon the said court shall appoint three disinterested and competent citizens of the county to view the ground designated and lay out from the point or points mentioned in such petition a passage or passages not more than eighty feet in area by either drift, shaft or slope, or by a combination of any of said methods by any practicable and convenient route to the coal of such person, firm or corporation, preferring in all cases an opening through the coal strata where the same is practicable. The said viewers shall at the same time assess the damages to be paid by the petitioner or petitioners to the owner or owners of such lands for the coal or other valuable material to be removed in the excavation and construction of said passage, also for such coal or other valuable material necessary to support the said passage, as well as for a right of way not exceeding fifteen feet in width from any such opening to any public road to enable persons to gain entrance to the mine through such opening or to provide therefrom, upon the surface a water course of suitable dimensions to a natural water stream, to enable the operator to discharge the water from said mine, if such right of way shall be desired by the petitioner or petitioners; which damages shall be fully paid before such opening is made. The pro-

ceedings shall be recorded in the road docket of the proper county and the pay of the viewers shall be the same as in road cases. If exceptions be filed, they shall be disposed of by the court as speedily as possible, and both parties shall have the right to take depositions as in road cases. If, however, the petitioner desires to make such openings or roads or waterways before the final disposition of such exceptions, he shall have the right to do so by giving bond, to be approved by the court, securing the damages as provided by law in the case of lateral railroads.

Section 2. It shall be compulsory upon the part of the mine owner or operator to exercise the powers granted by the provisions of the last preceding section for the procuring of a right of way on the surface from the opening of a coal mine to a public road or public roads, upon the request in writing of fifty miners employed in the mine or mines of such owner or operator: Provided, however, that with such request satisfactory security be deposited with the mine owner or operator by said petitioners (being coal miners) to fully and sufficiently pay all costs, damages and expenses caused by such proceedings and in paying for such right of way.

Section 3. In any mine or mines or parts thereof wherein water may have been allowed to accumulate in large and dangerous quantities, putting in danger the adjoining or adjacent mines and the lives of the miners working therein, and when such can be tapped and set free and flow by its own gravity to any point of drainage, it shall be lawful for any operator or person having mines so endangered, with the approval of the inspector of the district, to proceed to remove the said danger by driving a drift or drifts protected by bore holes, as provided for by this act, and in removing said danger it shall be lawful to drive across property lines if needful.

And it shall be unlawful for any person to dam or in any way obstruct the flow of any stream from said mine or parts thereof, when so set free, on any part of its passage to point of drainage.

## ARTICLE XI

### Sinking of Shafts

Section 1. The operator, superintendent or contractor shall erect over every shaft that is being sunk or shall hereafter be sunk a safe and substantial structure to sustain sheaves or pulleys, ropes and loads at a height of not less than twenty feet above the tipping place, and the top of such shaft and landing platform shall be arranged in such a manner that no material can fall into the shaft while the bucket is being emptied. The said structure shall be erected as soon as substantial foundation is obtained and in no case shall a shaft be sunk to a depth of more than fifty feet without such structure.

Section 2. If provisions are made to land the bucket on a truck, the said truck and platform shall be so constructed that material cannot fall into the shaft.

Section 3. Rock and coal from shafts that are being sunk shall not be raised, except in a bucket or on a cage, and said bucket or cage must be connected with the rope by a safety hook, clevis or other safe attachment. The rope shall be fastened to the side of the

drum and not less than three coils of rope shall always remain on the drum. Said shafts shall be provided with guides and guide attachments applied in such a manner as to prevent the bucket from swinging while being lowered or hoisted, and said guides and guide attachments shall be maintained at a distance of not more than seventy-five feet from the bottom of the shaft. This provision shall not apply to shafts less than one hundred feet in depth.

Section 4. It shall be the duty of the person in charge of shaft-sinking for the contractor or company to see that the sides of all shafts are properly secured for safety and that no loose rock or material is allowed to remain on any timber on top or on any timber in the shaft after each blast. Where explosive gas is encountered, the person in charge shall see that the shaft is examined before each shift and before the men descend after each blast and also that the place is safe. In sinking shafts all blasts must be exploded by electric battery. Provision must also be made for the proper ventilation of shafts while being sunk.

Section 5. An efficient brake shall be attached to every drum of an engine used in sinking shafts, and all machinery, ropes and chains connected therewith shall be examined once every twelve hours.

Section 6. Not more than four persons shall be lowered or hoisted in or on a bucket in any shaft at one time and no person shall ride on a loaded bucket.

## ARTICLE XII

### Ambulances and Stretchers

Section 1. The operator or the superintendent of every mine shall provide and keep in good condition at the principal entrance of the mine, or at such other place as the inspector may designate, one ambulance and at least two stretchers for conveying to his place of abode any person that may be injured while in the discharge of his duties, and also woolen and waterproof blankets: Provided, however, that at any mine in which less than fifty persons are employed inside, an ambulance shall not be required: Provided, further, that if the places of abode of ninety per centum of the workmen at any mine are within a radius of one mile from the principal entrance to the mine, an ambulance shall not be required: Provided, further, that where two or more mines are located within one mile of each other, or where the ambulance is located within one mile of each mine, only one ambulance as aforesaid shall be required if such mines have ready and quick means of communication by telegraph or telephone.

Section 2. The ambulance shall be constructed upon good substantial easy springs. It shall be covered and closed and shall be provided with spring mattresses or other comfortable bedding, to be placed on roller frames, together with sufficient covering and protection for the convenient movement of the injured. It shall be of sufficient size to convey at least two injured persons and two attendants at one time and shall be provided with seats for the attendants.

The stretchers shall be constructed of such material and in such a manner as to afford the greatest ease and comfort in the carriage of the injured persons.

At all mines there shall be provided bandages, splints and other medical supplies to render first aid and relief to employes who may be injured. These supplies shall be kept in a suitable room. The room shall be located near the entrance to or inside of the mine and shall be sufficiently large to accommodate the injured employes while they are receiving medical attention .

Section 3. Whenever any person employed in or about any mine shall receive such an injury by accident or otherwise as to render him unable to walk to his place of abode, the operator or the superintendent shall immediately have said person removed to his place of abode or to a hospital, as the case may require.

Section 4. If the conditions are such that the person injured can be conveyed to his home or to the hospital more conveniently and more quickly by railroad, trolley road, or other conveyance, such mode of conveyance shall be permitted, but in such cases the conveyance must be under cover and the comfort of the injured person must be provided for.

## ARTICLE XIII

### Wash Houses

Section 1. Where the clothing or wearing apparel of employes becomes wet by reason of working in wet places in the mines, it shall be the duty of the operator or superintendent of each mine, at the request in writing of the mine inspector, who shall make such request upon the petition of any five miners of any one mine in the district working in the aforesaid wet places, to provide a suitable building convenient to the principal entrances of such mine, for the use of the persons employed in wet places therein, for the purpose of washing themselves and changing their clothes when entering the mine and returning therefrom. The said building shall be maintained in good order and be properly lighted and heated, and shall be provided with facilities for persons to wash. If any person or persons shall neglect or fail to comply with the provisions of this article, or maliciously injure or destroy or cause to be injured or destroyed the said building or any part thereof, or any of the appliances or fittings used for supplying light and heat therein, or do any act tending to the injury or destruction thereof, he or they shall be deemed guilty of a misdemeanor.

## ARTICLE XIV

### Boilers and Connections

Section 1. All boilers used for generating steam in and about the mines shall be kept in good condition and the superintendent shall have them examined and inspected by a duly qualified person once every six months. A report of said examination shall be certified to by said person and sent to the inspector of the district within thirty days thereafter.

Section 2. Each boiler shall be provided with a safety valve of sufficient area for the steam to escape, and with weights or springs properly adjusted.

Section 3. No boiler used for generating steam shall be placed or allowed to remain inside of any mine, without the consent of the in-

spector, which shall be given in writing to the superintendent, and said boiler shall be enclosed in a fire-proof building and placed within fifty feet of the bottom of an upcast shaft, which shaft shall not be less than thirty-five square feet in area. Said boiler shall conform with sections one, two and four of this article.

Section 4. Every boiler house shall be provided with a sufficient number of steam gauges, which shall be properly connected with the boilers, to indicate the pressure of steam to the firemen, outside foreman or superintendent, and another steam gauge shall be attached to the main steam pipe in the engine house so that the engineer can readily examine it. All steam gauges shall be kept in good order, tested and adjusted every six months, and their condition shall be reported to the inspector in the same manner as the report of the boiler inspection is made.

## ARTICLE XV

### Inside Stables

Section 1. It shall not be lawful for the superintendent or mine foreman to provide a horse or a mule stable inside of any mine, unless space for said stable is excavated in solid strata of rock, slate or coal. If excavated in the coal seam, the wall shall be built of brick, stone or concrete not less than twelve inches in thickness, and said wall shall be built from the bottom slate to the roof. Wood or other combustible material shall be used in the smallest practicable quantity in the construction of the inside of said stable. The air current used for the ventilation of said stable shall not be intermixed with the air current used for ventilating any other part of the mine, but shall be conveyed directly to the return air current. No open light shall be permitted in any stable in any mine.

No hay or straw shall be taken into any mine, unless pressed and made up into compact bales, which shall be kept in a storehouse built apart from the stable and in the same manner as the stable. Under no circumstances shall the hay be stored in the stable.

## ARTICLE XVI

### Regulations for Powder and Detonators

Section 1. No powder or high explosive shall be stored in any mine, and no more of either article shall be taken into any mine at one time by any one person than is required in one shift. The quantity shall not exceed five pounds: *Provided, that in a mine where shot-firers are employed, the shot-firers shall have the right to take a sufficient quantity to complete their work.*

Black powder for use in mines shall be put up in five, ten, fifteen and twenty-five pound metallic cans, canisters or receptacles of equally safe material.

Section 2. In all mines or parts of mines generating explosive gas, no explosive other than a "permitted explosive" shall be used. Each charge shall consist of only one kind of explosive. The term "permitted explosive" means an explosive that has fulfilled the requirements of certain tests as specified by the Department of Mines, the tests to be made at a testing station to be designated by said Department and open to all manufacturers of explo-

sives for use in this State. The Department of Mines shall forward to the operators, upon application, the names of all explosives, their methods of use and the results of the tests made therewith.

No "permitted explosive" shall be sold for use in bituminous mines, unless the name of manufacturer, name of explosive, method of handling and full instructions for use are conspicuously displayed on or in the package containing the explosive.

Section 3. Detonators shall be under the control of the mine foreman and shall be issued only to those by whom they are used, and shall at all times be kept in securely locked cases separate and apart from other explosives until required for use.

The Chief of the Department of Mines, when satisfied that any explosive has become dangerous, may prohibit the use thereof in any mine either absolutely or subject to conditions.

## ARTICLE XVII

### Regulations for Oil

Section 1. The oiling or greasing of cars inside of any mine is strictly prohibited, unless the place where said oil or grease is used is thoroughly cleaned at least once every day to prevent the accumulation of waste oil or grease on the roads or in the drains at that point. Not more than one barrel of lubricating oil shall be permitted in any mine at one time and it shall be kept in a fire-proof building cut out of solid rock or made of masonry or concrete, of sufficient thickness to insure safety in case of fire.

Section 2. No explosive oil shall be taken into or used in any mine for lighting purposes, except when used in safety lamps, and shall not be taken into or stored in any mine in quantities exceeding five gallons. Said oil when stored in a mine shall be kept in a fire-proof vault made of masonry or concrete.

Section 3. All oils or materials used in open lamps shall be non-explosive and free from odors and fumes deleterious to health, and shall have a burning point not lower than three hundred degrees, and must not produce over eleven one-hundredths of one per cent. of their weight of soot when burned in a miner's lamp with a flame one and one-half inches high, the determination of the percentage of soot to be by tests specified by the Department of Mines.

Section 4. Paraffine wax used in mines shall not contain over three per cent. of oil.

Section 5. All illuminants sold to be used in open lamps in mines shall have branded conspicuously on the barrel or package containing the same the name of the manufacturer, date of shipment and percentage of soot.

Section 6. Any employe who shall use or any mine foreman who shall permit to be used in any mine any oil or any other material for illuminating purposes other than that prescribed in this article shall be guilty of a misdemeanor.

Section 7. It shall be the duty of the inspector, whenever he has reason to believe that an illuminant is being used or sold or offered for sale in violation of the provisions of this article, to take samples of the same and have them tested under the direction of the Department of Mines.

## ARTICLE XVIII

## Employment of Boys and Females

Section 1. No boy under the age of fourteen years, or any woman or girl of any age, shall be employed in or about any mine, and no boy under the age of eighteen years shall be permitted to mine or load coal in any room, entry or other working place, unless in company with a person over eighteen years of age.

No boy under the age of sixteen years shall be employed in or about any mine, unless during the time that said boy is employed there is on file in the office of said mine an employment certificate issued by the city, borough, township or county superintendent of public schools, or secretary of the school board of the township or public school, or a principal of a parochial school, or by his duly appointed deputy, reciting the age of said boy as it appears on any record satisfactory to the person who issues said certificates, or, if such record of age be lacking, reciting the age of said boy according to an affidavit taken by his parent, guardian or custodian and attached to said certificate, and said certificate shall for all purposes be conclusive evidence of the age of said boy.

Nothing in this section shall be held to forbid the employment of a girl between the ages of fourteen and sixteen years in the office of a mine, provided that during the time of employment there is on file for said girl in said office an employment certificate of the character hereinbefore provided for the employment of boys under sixteen years of age inside any mine.

Section 2. Any superintendent or mine foreman who fails to comply with the provisions of this article shall be deemed guilty of a misdemeanor, and it shall be the duty of the inspector, or any other person who knows that the superintendent or mine foreman has violated any of the provisions of this article, to prosecute said superintendent or said mine foreman in accordance with section two of article twenty-six of this act.

## ARTICLE XIX

## Boards to Examine Applicants for Certificates of Qualification as Mine Foremen, Assistant Mine Foremen and Fire Bosses

Section 1. In order to maintain efficiency in mine management and to have a competent standard of qualifications among mine officials and to promote the health and safety of the employes, the Governor shall during the month of January of each year appoint a sufficient number of miners and operators, managers or superintendents, who, with the inspectors in office, shall comprise the Boards of Examiners to examine applicants for certificates of qualification as mine foremen, assistant mine foremen and fire bosses in bituminous mines. Said miners and operators, managers or superintendents, must be citizens of this Commonwealth and at least thirty-five years of age. Each board shall be comprised of two inspectors, who shall act ex-officio, one miner who shall have received a certificate of qualification qualifying him to act as mine foreman in bituminous mines of this Commonwealth that generate explosive gas, and one operator, manager or superintendent, who shall hold office for one year from

date of appointment. The Chief of the Department of Mines shall designate the members who shall constitute the different boards and shall name the places where the boards shall hold the examinations. The miner and the operator, manager or superintendent appointed on each board shall be from the districts under the supervision of the two inspectors who are members of the board. The boards shall meet on the second Tuesday in May each year and shall give due notice for at least two weeks of the time and places where the examinations will be held.

Each board shall organize by electing one of the inspectors chairman and the other inspector secretary, and after being duly organized the members shall take and subscribe to the following oath before an officer authorized to administer the same, namely:

"We, the undersigned, do solemnly swear (or affirm) that we will perform the duties of examiners of applicants for certificates of qualification as mine foremen, assistant mine foremen and fire bosses; that we will not divulge or make known to any person any question prepared for an examination, or in any manner assist any applicant to pass the examination, but will be governed by the evidence of the qualifications of applicants to fill said positions and not by any consideration of personal favor, and that we will certify all whom we may find qualified in accordance with this act and none other."

Any member of any Board of Examiners who shall divulge or make known any question prepared for an examination, prior to such question being handed to the applicants at the examination, or in any manner assist any applicant to pass the examination, shall be deemed guilty of a misdemeanor.

Any vacancy that may occur in the membership of the boards shall be filled by the Governor in accordance with the provisions of this section.

Section 2. The members of the Boards of Examiners appointed by the Governor, with the inspectors in office, shall meet in the city of Pittsburgh two weeks before the time set for the examination of applicants, for the purpose of discussing the general scope of the theoretical and practical questions to be given the applicants and to adopt rules to govern the examinations and to decide any other important matters pertaining to their duties, and said boards shall select a committee of six of their number, comprising two inspectors, two miners and two operators, managers or superintendents, to formulate a code of questions to be used at the examinations. The said committee shall select one of their members as chairman and one as secretary. The questions prepared by the said committee shall be printed under the personal direction of the chairman and the secretary of the committee and sent by them by express in sealed packages, each package containing a set of questions for each session, to the chairman of each Board of Examiners, who shall break the seal and open the package at the commencement of each session in the presence of the other members of the board.

After the examinations of applicants are over and before the several boards meet to examine the papers of the applicants, the said committee of six shall meet again to prepare answers for the ques-

tions propounded, and these answers shall be sent to the chairman of each board, to be used in rating the value of the answers given by the applicants. While preparing answers to the questions the committee is hereby authorized to engage the services of a clerk, who shall be a stenographer, and whose compensation and mileage shall be the same as that of the members of the committee.

Section 3. Each member of each board shall receive six dollars a day for each day actually employed, not exceeding twenty days in all, and mileage at the rate of two and one-half cents a mile for each mile necessarily traveled in going from his home to the place of meeting and return by the shortest practicable railway route: Provided, that the mileage shall be paid but once for each continuous session of the board. By a continuous session is meant a session of not less than four days in each week: Provided, further, that the committee of six shall each receive additional compensation at the rate of six dollars a day for the time spent in preparing the questions and answers. Each member shall also be reimbursed for all other necessary expenses incurred by him in discharge of his duties. Each Board of Examiners is hereby authorized to employ the services of a clerk, who shall be a stenographer and whose compensation and rate of mileage shall be the same as that of the members of the board. The clerk of each board shall, on final adjournment, send to the Chief of the Department of Mines properly attested vouchers for compensation and expenses of each member of the board, and also a voucher covering his own compensation and expenses, which vouchers shall be first approved by the chairman and the secretary of the board. The Chief of the Department of Mines shall then approve said vouchers and transmit them to the Auditor General, who shall issue a warrant for their payment to the State Treasurer.

Section 4. Applicants must appear before the Board of Examiners of the inspection district wherein they reside. All persons who desire to attend the examination shall notify the chairman of the board of their intention, if possible, not less than six days prior to the day set for the examination. The boards shall inquire into the character and qualifications of applicants who present themselves for examination.

Applicants for certificates of qualification as mine foremen and assistant mine foremen shall be citizens of the United States, of good moral character and of known temperate habits, at least twenty-three years of age, and shall have had at least five years' practical experience after sixteen years of age as miners or mining engineers or men of general work inside of the mines of Pennsylvania. Applicants for certificates of qualification as fire bosses shall be citizens of the United States, of good moral character and of known temperate habits, at least twenty-three years of age, and shall have had at least five years' practical experience after sixteen years of age as miners or men of general work, and shall have had experience in mines in Pennsylvania that generate explosive gas.

All applicants shall furnish the board with certificates as to their character and temperate habits. The certificates shall also show the length of service in the different mines.

Certificates of qualification as mine foremen shall be of two grades, namely: Certificates of first grade shall be granted to persons who have given to the Board of Examiners satisfactory evidence of their ability to perform the duties of mine foremen in gaseous mines and

who shall have received an average of at least eighty per centum in the examination. Certificates of second grade shall be granted to persons who have given to the Board of Examiners satisfactory evidence of their ability to perform the duties of mine foremen in non-gaseous mines and who shall have received an average of at least eighty per centum in the examination.

Certificates of qualification as assistant mine foremen shall be granted to persons who have given to the Board of Examiners satisfactory evidence of their ability to perform the duties of assistant mine foremen in gaseous mines and who shall have received an average of at least sixty-five per centum in the examination.

All applicants for certificates as mine foremen and assistant mine foremen in gaseous mines must also undergo an oral examination in the presence of explosive gas.

Certificates of qualification as fire bosses shall be granted to persons who have given to the Board of Examiners satisfactory evidence of their ability to perform the duties of fire boss after an oral examination in the presence of explosive gas.

Section 5. Before examination each applicant for a certificate of qualification as mine foreman, assistant mine foreman or fire boss shall pay to the Board of Examiners the sum of one dollar, and, if successful, two dollars additional for a certificate. All money received by the Boards of Examiners for examination fees and certificates shall be transmitted to the Chief of the Department of Mines, who shall pay the same into the State Treasury, less the cost of issuing and recording certificates.

Section 6. Each Board of Examiners, or at least three members thereof, shall certify to the Chief of the Department of Mines, on forms furnished by him, every person whose examination shall disclose his fitness for the duties of mine foreman, assistant mine foreman or fire boss, as above classified, and the Chief of the Department of Mines shall then prepare certificates of qualification for the successful applicants and send them to the chairman of the board for distribution. Each certificate shall contain the full name, age and place of birth of applicant, and also the length and nature of his previous service in or about the mines. The certificates shall be in manner and form as prescribed by the Chief of the Department of Mines.

Section 7. Each Board of Examiners shall send to the Chief of the Department of Mines the answers and all other papers of the applicants, together with the tally sheets and a list of the questions and answers as prepared by the committee selected by the boards, which shall be filed in the Department of Mines as public documents.

Section 8. Certificates of service that shall have the same effect for the purposes of this act as certificates of qualification shall be granted by the Chief of the Department of Mines, on the reports of the Boards of Examiners, to all persons who are acting as assistant mine foremen in gaseous mines when this act becomes effective. Certificates of service shall be in manner and form as prescribed by the Chief of the Department of Mines and shall contain the full name, age and place of birth of applicant and also the length and nature of his previous service in or about the mines. Applicants for certificates of service, shall pay to the board the sum of two dollars, which shall be transmitted to the Chief of the Department of Mines.

Section 9. It shall be unlawful for any operator, manager or superintendent to employ as mine foreman in any mine, or as assistant mine foreman in any gaseous mine, any person who has not obtained the proper certificate of qualification or service required by this act: Provided, that all persons holding certificates of qualification as mine foremen granted under the provisions of the act of May fifteen, one thousand eight hundred and ninety-three, may continue to serve; and, provided further, that any person acting as mine foreman by virtue of holding a certificate of service granted previous to the passage of the act of May fifteen, one thousand eight hundred and ninety-three, may continue to serve at any mine where the general conditions affecting the health and safety of the persons employed do not differ materially from those at the mine in which he was employed when said certificate was granted, which question shall be decided by the inspector of the district; and it shall be unlawful for any operator, manager, superintendent or mine foreman to employ as fire boss any person who has not obtained the proper certificate of qualification required by this act: Provided, that all persons holding certificates of qualification as fire boss granted under the provisions of the act of May fifteen, one thousand eight hundred and ninety-three, may continue to serve.

Section 10. If any person shall forge or counterfeit a certificate, or knowingly make or cause to be made any false statement in any certificate issued under this act or any previous act or in any copy thereof, or shall make use of such forged or false certificate or copy thereof, or shall make use of any false declaration, representation or statement in any such certificate or copy thereof or any document containing the same, he shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not less than two hundred dollars nor more than five hundred dollars, or imprisoned for a term not exceeding one year, or both, at the discretion of the court.

Section 11. In case of the loss or destruction of a certificate the Chief of the Department of Mines shall issue a copy thereof to the person losing said certificate on payment of the sum of one dollar: Provided, that it shall be shown to the satisfaction of the Chief of the Department of Mines that the loss or destruction has actually occurred.

Section 12. Nothing in this article shall prevent a first grade mine foreman from acting as assistant mine foreman in any mine, or a second grade mine foreman from acting as assistant mine foreman in a non-gaseous mine.

## ARTICLE XX

### Mine Inspectors' Examining Board; Appointment and Duties. Mine Inspectors; Their Appointment, Duties and Powers

Section 1. The Governor shall appoint during the month of January, one thousand nine hundred and thirteen, and every four years thereafter, five citizens of this Commonwealth, of good repute, to be known as the Mine Inspectors' Examining Board, whose duty it shall be to examine applicants for the office of inspector in the bituminous coal region of this Commonwealth. Two of the members of said board shall be mining engineers, and three of the members shall have

passed successful examinations qualifying them to act as inspectors or mine foremen in bituminous mines generating explosive gas, and shall have had at least five years' practical experience as miners in the bituminous mines of Pennsylvania. Applicants for appointment on the said Examining Board shall be at least thirty years of age.

Each member of the Examining Board shall receive the sum of ten dollars a day for each day actually employed and all necessary expenses incurred in carrying out the provisions of this article, which shall be paid out of the State Treasury on warrant of the Auditor General issued upon presentation of vouchers properly made out and sworn to by each member of the board and approved by the Chief of the Department of Mines. The Examining Board is hereby authorized to engage the services of a clerk, who shall be a stenographer.

Any vacancy that may occur in the membership of the Examining Board shall be filled by the Governor according to the provisions of this section.

Section 2. The said Examining Board shall meet on the first Tuesday in March following its appointment, in the city of Pittsburg, to examine applicants for the office of inspector. Two weeks previous to the aforesaid time the board shall meet to prepare questions and formulate rules for conducting the examination. The board may also be convened by the Governor at any other time for the purpose of filling vacancies or performing any other necessary work. The board, after being duly organized, shall take and subscribe to, before any officer authorized to administer the same, the following oath, namely:

"We, the undersigned, do solemnly swear (or affirm) that we will perform the duties of examiners of applicants for appointment as inspector of mines to the best of our ability, and that in recommending or rejecting said applicants we will be governed by the evidence of their qualifications to fill the position and not by any consideration of political or personal favor, and that we will certify all whom we may find qualified according to the true intent and meaning of this act and none other." The oaths of the members of the Examining Board shall be filed in the Department of Mines.

Section 3. The qualifications of candidates for the office of inspector shall be certified to the Examining Board and shall be as follows:

The candidates shall be citizens of Pennsylvania, of temperate habits, of good repute as men of personal integrity, in good physical condition, and shall be between the ages of thirty and fifty years: Provided, however, that any inspector appointed under the provisions of the act of May fifteen, one thousand eight hundred and ninety-three, or under the provisions of this act, shall be eligible for reappointment, even if beyond fifty years of age, if in good physical condition. The candidates shall have a knowledge of the different systems of working coal seams and shall have had at least ten years' practical experience in bituminous mines, five years of which immediately preceding their examination shall have been in bituminous mines of this Commonwealth, and shall also have had practical experience with explosive gas and other dangerous gases found in coal mines, and upon examination shall give evidence of such theoretical as well as practical knowledge and general intelligence respecting mines and mining and the working and ventilation of mines as will

satisfy the Examining Board of their capability and fitness for the duties imposed upon inspectors of mines by the provisions of this act.

Section 4. The principal examination shall be in writing and each applicant shall also undergo an oral examination pertaining to explosive gas, safety lamps, methods of ventilation and mine management. The questions and answers thereto in the oral examination shall be reported verbatim by an expert stenographer and typewritten fully to assist the board in the work of rating the qualifications of the candidates. Candidates who shall make a general average of at least ninety per centum shall be deemed successful. The manuscripts and other papers of all applicants in the principal examination, together with the tally sheets and the correct solution of each question as prepared by the Examining Board, and also the stenographer's report of the oral examination, shall be filed in the Department of Mines. The Examining Board, or at least four members thereof, shall certify to the Governor and also to the Department of Mines the names and percentages of all successful candidates who are properly qualified under the provisions of this article to fill the office of inspector. A certificate of qualification prepared by the Chief of the Department of Mines shall be issued to each successful candidate.

The Examining Board shall as soon as practicable after the examination furnish to each applicant on printed slips of paper a copy of all questions (oral and written) given at the examination, marked, solved right, imperfect or wrong, as the case may be.

Section 5. The Governor shall, from the names certified to him by the Examining Board, commission one person to be inspector for each district in pursuance of this act, whose commission shall be for a full term of four years from the fifteenth day of May following the regular examination: Always provided, however, that the candidate or candidates highest in percentage in the examination shall have priority in being commissioned for a full term or an unexpired term over candidates of lower percentage. Each inspector appointed under the provisions of the act of May fifteen, one thousand eight hundred and ninety-three, may continue in office until May fifteen, one thousand nine hundred and thirteen.

After the regular examination in March, one thousand nine hundred and nine, the Chief of the Department of Mines shall have the right to assign the inspectors to the districts for which in his opinion they are best fitted.

Section 6. When a vacancy occurs in said office of inspector the Governor shall commission for the unexpired term from the names on file in the Department of Mines the person highest in percentage (but no person shall be commissioned who has not received an average of at least ninety per centum). When the number of candidates who have received an average of at least ninety per centum shall be exhausted, the Governor shall cause the aforesaid Examining Board to meet, for a special examination, and examine the persons who may present themselves for examination in accordance with section three of this article, and the board shall certify to the Governor and also to the Chief of the Department of Mines the names of all applicants who have made a general average of at least ninety per centum in said examination, as provided for in section four of this article, one

of whom shall be commissioned by the Governor according to the provisions of section five of this article, for the office of inspector for the unexpired term. In conducting the said special examination the board shall comply with all the requirements of sections three and four of this article.

Section 7. After the passage of this act the salaries of the inspectors shall be as follows:

*An inspector who has not served as an inspector or who will have served as such less than four years on the fifteenth day of May following his appointment, shall receive the sum of three thousand dollars a year; an inspector who will have served four years on the fifteenth day of May following his appointment and less than eight years, shall receive the sum of three thousand five hundred dollars a year; and an inspector who will have served eight years or more on the fifteenth day of May following his appointment, shall receive the sum of four thousand dollars a year; to be paid quarterly by the State Treasurer on warrant of the Auditor General issued upon the presentation of voucher approved by the Chief of the Department of Mines. Each inspector may also incur traveling expenses and such other expenses as may be necessary for the proper discharge of his duties under the provisions of this act, which shall be paid quarterly by the State Treasurer on warrant of the Auditor General issued upon presentation of vouchers properly made out and sworn to by the inspector and approved by the Chief of the Department of Mines. Each inspector shall have an office in his district, which may be at his place of residence, provided that a suitable room approved by the Chief of the Department of Mines be set apart for that purpose. The Chief of the Department of Mines shall have authority to procure for the inspectors on their request furniture, instruments, chemicals, typewriters, stationery and all other necessary supplies, which shall be paid for by the State Treasurer on warrant of the Auditor General upon presentation of vouchers approved by the Chief of the Department of Mines. All furniture, instruments, plans, books, memoranda, notes and other materials pertaining to the office of inspector shall be the property of the State and shall be delivered by the inspector to his successor in office.*

Section 8. The inspectors shall be allowed all necessary expenses incurred by them in enforcing the several provisions of this act in the respective courts of this Commonwealth (provided they have the consent of the Department of Mines before such expense is incurred), the same to be paid by the State Treasurer on warrant of the Auditor General issued upon presentation of itemized vouchers approved by the court before which the proceedings were instituted and also by the Chief of the Department of Mines.

Section 9. Each inspector shall before entering upon the discharge of his duties give bond in the sum of five thousand dollars, with sureties to be approved by the president judge of the district in which he resides, conditional for the faithful discharge of his duties, and shall take an oath or make affirmation that he will discharge his duties with impartiality and fidelity to the best of his knowledge and ability. But no person who is acting as manager or agent of any coal mine or as mining engineer or who is interested in operating any coal mine shall at the same time act as inspector under this act.

Section 10. In case the inspector becomes incapacitated to perform the duties of his office or is granted a leave of absence by the

Chief of the Department of Mines, it shall be the duty of the Governor, at the request of the Chief of the Department of Mines, to appoint temporarily to the office the person standing highest on the eligible list of applicants filed in the Department of Mines. The temporary inspector shall act until the regular inspector is able to resume the duties of his office and shall be paid in the same manner as hereinbefore provided for the payment of the regular inspector.

Section 11. Each inspector shall devote the whole of his time to the duties of his office. It shall be his duty to examine each mine in his district as often as possible, giving special attention to all mines generating explosive gas and to other mines where unusual dangers may be suspected to exist, and to see that all the provisions of this act are observed and strictly carried out, especially those that demand that the air current be carried to the working faces. He shall keep in his office a record of all examinations of mines showing the condition in which he finds them, especially with reference to ventilation and drainage, the number of persons employed inside of each mine, the extent to which the law is obeyed and the progress made in the improvement of mines. He shall keep a record of all serious accidents, showing the nature and causes thereof, and the number of deaths resulting therefrom.

Section 12. It shall be the duty of the inspector, after an examination of any mine, to make out a written or partly written and partly printed report of the condition in which he finds it, and to post the said report or to forward the same to the superintendent of the mine, within five days from the date of making the said examination, to be posted by him immediately upon receiving the same in the office at the mine or in some other conspicuous place, where it shall remain for one year open to examination by any person employed in or about the said mine. The report shall show the date of the inspection, the number of cubic feet of air in circulation, where the measurement of the air was made, and the quantity of air as measured at the last cut-through in each split, together with the number of persons employed in each split, and also at any other place requested by the Chief of the Department of Mines. The report shall contain such other information as the inspector may deem necessary.

If the inspector discovers any room, entry, airway or other working places being driven in advance of the air current, contrary to the requirements of this act, he shall order the workmen in such places to cease work at once until the law is complied with.

If the inspector discovers that the air in a mine is becoming vitiated by the unnecessary blasting of the coal, he shall have the power to regulate the use of powder or explosives and to designate at what hours blasting shall be done.

Section 13. To enable the inspector to perform the duties imposed upon him by this act, he shall have the right at all times to enter any mine in his district to make examinations or obtain information, and upon the discovery of any violation of this act, or upon being informed of any violation of the act, he shall institute proceedings against the person or persons at fault, under the provisions of section two of article twenty-six of this act. In case any mine or part of a mine is in the judgment of the inspector in so dangerous a condition as to jeopardize life and health, he shall at once notify the Chief of the Department of Mines, who shall imme-

diately direct two or more of the other inspectors to accompany promptly the said inspector to the mine wherein said dangerous condition is alleged to exist. The inspectors shall make a full investigation and if they shall agree that there is immediate danger, they shall direct the superintendent of the mine in writing to remove forthwith said dangerous condition. If the superintendent fails to do so, the inspectors shall immediately apply in the name of the Commonwealth to the court of common pleas of the county in which said mine is located, or to a judge of said court in chambers, for a writ of injunction to enjoin the suspension of all work in and about said mine. Whereupon said court or judge shall at once proceed to hear and determine the case, and if the cause appear to be sufficient, after hearing the parties and their evidence, as in like cases, shall issue its writ to restrain the working of said mine until all cause of danger is removed, and the costs of said proceedings shall be borne by the owner, lessee or agent of the mine: Provided, that if said court shall find the cause not sufficient, then the case shall be dismissed and the costs shall be borne by the county wherein said mine is located: Provided, also, that should any inspector find during his inspection of a mine or part of a mine such dangerous conditions existing therein that in his opinion any delay in removing the workmen from such dangerous places might cause loss of life or serious personal injury to the employes, the said inspector shall have the right to temporarily withdraw all persons from such dangerous places until the foregoing provisions of this section can be carried into effect.

Section 14. Each inspector shall make the following reports to the Chief of the Department of Mines on blank forms provided for that purpose: Not later than the tenth of each month he shall make a report of all fatal and serious non-fatal accidents that have occurred in his district during the preceding month, stating the date, nature and cause of each accident and placing the responsibility therefor, together with the name, age, occupation and nationality of each person killed and injured, and whether married or single and the number of widows and orphans left, which report shall be recorded and filed in the Department of Mines and included (or a synopsis of the same) in the annual report of said Department. Not later than the sixth of each month he shall make a report, giving the name of operator and name and location of each mine inspected during the preceding month, with date of inspection, condition of mine, quantity of air in circulation at all points required by the Chief of the Department of Mines, and the number of persons employed in each split of air. Not later than the twentieth of February of each year he shall make an annual report, which shall briefly recapitulate the duties performed by him during the preceding year and briefly describe the condition of the mines in his district relative to ventilation, drainage and general sanitary arrangements, as relating to the health, safety and welfare of the employes, and which shall also contain such suggestions or information of importance as he may deem necessary or as required by the Chief of the Department of Mines.

## ARTICLE XXI

## Discretionary Powers of Inspectors; Arbitration

Section 1. The inspector shall exercise sound discretion in the performance of his duties under the provisions of this act, and if the operator, superintendent, mine foreman or other person employed in or about any mine shall be dissatisfied with any decision the inspector has given in the discharge of his duties, which decision shall be in writing, it shall be the duty of the dissatisfied person to appeal from said decision to the Chief of the Department of Mines, who shall at once direct two or more of the other inspectors to accompany promptly the inspector of the district to make further examination into the matter in dispute. If the said inspectors shall agree with the decision of the inspector of the district, their decision shall be final unless the dissatisfied person shall, within seven days of the receipt of the decision of the committee of inspectors, appeal therefrom to the court of quarter sessions of the county in which said mine is situated.

Section 2. Whereupon the court or the judge of said court in chambers shall forthwith appoint three practical, reputable, competent and disinterested persons, who are not in the employ of the company or any of its officers, whose duty it shall be under instructions of the said court to forthwith examine into the cause of complaint and report under oath the facts as they exist or did exist, together with their opinions thereon, within ten days after their appointment. The report of said committee shall become absolute, unless exceptions thereto shall be filed within ten days after the notice of the filing of the report by the operator, superintendent, mine foreman, inspector or other persons, as aforesaid; and if exceptions are filed the court shall at once hear and determine the same, and the decision of the court shall be final and conclusive.

Section 3. If the court shall finally sustain the decision of the inspectors, then the appellant shall pay all costs of said proceedings, and if the court shall not sustain the decision of the inspectors, then said costs shall be paid by the county: Provided, that no appeal from any decision made by any inspector, which can be immediately complied with, shall work as a supersedeas to such decisions during the pendency of such appeal, but all decisions shall be in full force until reversed or modified by the proper court.

## ARTICLE XXII

## Neglect or Malfeasance of Inspectors

Section 1. The court of common pleas in any county or district, upon a petition signed by not less than fifteen reputable citizens, who shall be miners or operators of mines, and with the affidavit of one or more of said petitioners attached, setting forth that any inspector of mines is neglectful of or is incompetent to perform the duties of his office, or that he is guilty of malfeasance in office, shall issue a citation in the name of the Commonwealth to the said inspector to appear on not less than fifteen days' notice, upon a day fixed, before said court at which time the court shall proceed to inquire into and investigate the allegations of the said petitioners: *Provided, however, that the citation shall not issue until the peti-*

*tioners shall file a bond in said court, with sufficient sureties to be approved by the court, conditioned that the petitioners shall pay all the costs of the proceedings in case the charges are not sustained.*

Section 2. If the court finds that the said inspector is neglectful of or is incompetent to perform the duties of his office, or that he is guilty of malfeasance in office, the court shall certify the same to the Governor, who shall declare the office of said inspector vacant and proceed in compliance with the provisions of this act to fill the vacancy.

The costs of said investigation shall, if the charges are sustained, be imposed upon the inspector, but if the charges are not sustained they shall be imposed upon the petitioners.

## ARTICLE XXIII

### Inspection Districts

Section 1. Under this act the bituminous counties of the Commonwealth shall be arranged into twenty-two inspection districts, and it shall be the duty of the Chief of the Department of Mines to assign the inspectors to their respective districts. He shall also designate their places of abode at points as convenient as possible to the mines of their districts.

Section 2. With the consent of the Governor, the Chief of the Department of Mines may at any time redistrict the bituminous districts and add to the number of inspectors, if in his judgment the number should be increased.

## ARTICLE XXIV

### Annual Reports

Section 1. On or before the twenty-fifth day of January in each year the operator or the superintendent of every mine shall send to the inspector of the district a correct report, specifying with respect to the year ending the thirty-first day of December preceding, the name of the operator and officers of the mine, number of tons of coal mined, number of tons of coke manufactured, number of different employes, classified, and the total number of days worked during the year. The report shall be in such form and give such information regarding the mine as may be from time to time required and prescribed by the Chief of the Department of Mines.

The operator or the superintendent who fails to comply with the provisions of this article shall be deemed guilty of a misdemeanor.

## ARTICLE XXV

### Special and General Rules

#### Duties of Miner

Rule 1. The miner shall examine his working place before beginning work and take down all dangerous slate or otherwise make it safe by properly timbering it before commencing to mine or load coal. He shall examine his place to see whether the fire boss has left the date marks indicating his examination thereof, and, if said marks cannot be found, it shall be the duty of the miner to notify the mine foreman or the assistant mine foreman of the fact. The miner

shall at all times be careful to keep his working place in a safe condition during working hours.

Should he at any time find his place becoming dangerous from gas or roof, or from any unusual condition that may arise, he shall at once cease working and inform the mine foreman or the assistant mine foreman of said danger, but before leaving his place he shall put some plain warning across the entrance thereto to warn others against entering into danger.

It shall be the duty of the miner to mine his coal properly before blasting and to set sprags under the coal while undermining to secure it from falling. After each blast he shall exercise care in examining the roof and coal, and shall secure them safely before beginning to work.

He shall order all props, cap pieces and all other timbers necessary at least one day in advance of needing them, as provided for in the rules of the mine. If he fails to receive said timbers and finds his place unsafe, he shall vacate it until the necessary timbers are supplied.

When places are liable to generate sudden outbursts of explosive gas, no miner shall be allowed to charge or fire shots, except under the supervision and with the consent of the mine foreman or the assistant mine foreman or some other competent person designated by the mine foreman for that purpose.

The miner shall remain during working hours in the working place assigned to him by the mine foreman or the assistant mine foreman, and he shall not leave his working place for another working place without the permission of the mine foreman, assistant mine foreman or fire boss, and he shall not wander about the hauling roads or enter abandoned or idle workings.

#### Duties of Driver

Rule 2. When a driver has occasion to leave his trip he must be careful to see that it is left, when possible, in a safe place, secure from cars or other dangers, and where it will not endanger the driver of the trip following.

He must take care while taking his trip down grade to have the brakes or sprags so adjusted that he can keep the cars under control and prevent them from running over himself or others.

He shall not leave any cars standing where they may materially obstruct the ventilating current, except in case of accident to the trip.

He shall not allow any person to ride on loaded mine cars. He shall not allow any person to drive his horse or mules in his stead, unless the person is competent and has the special permission of the mine foreman or the assistant mine foreman. When it is his duty to open a door for the purpose of passing his trip through he shall immediately close it thereafter.

#### Duties of Trip Rider

Rule 3. The trip rider shall exercise care in seeing that all hitchings are safe for use and that all the trip is coupled before starting, and should he at any time see any material defect in the rope, link or chain he shall immediately remedy said defect, or if he

is unable to do so he shall detain the trip and report the matter to the mine foreman or assistant mine foreman. He shall not allow any person to ride on the full trip. He shall not allow any person to ride on the empty trip, except at the beginning and end of each shift or upon written permission from the mine foreman, and the speed shall not exceed eight miles an hour.

### Duties of Engineer

Rule 4. It shall be the duty of the engineer, who shall be a sober, competent person over twenty-one years of age, to keep a careful watch over his engine and all machinery under his charge and to see that the steam pressure does not exceed at any time the limit allowed by the superintendent.

He shall make himself acquainted with the signal codes provided for in this act.

He shall not allow any unauthorized person to enter the engine house, nor shall he allow any person to handle or run the engine without the permission of the superintendent.

When workmen are being lowered or raised he shall take special precautions to keep the engine well under control.

### Duties of Motorman and Locomotive Engineer

Rule 5. The motorman or locomotive engineer shall keep a sharp lookout ahead and sound the whistle or alarm bell frequently when coming near the parting switches or landings and shall not exceed the speed allowed by the superintendent or mine foreman. He shall see that the motors, cables and controlling parts are kept clean and in a safe operating condition and that the headlight is burning properly when the locomotive is in motion. He shall not allow any person, except his attendant, to ride on the locomotive or on the full cars.

### Duties of Fireman

Rule 6. Every fireman in charge of a boiler or boilers for the generation of steam shall keep a careful watch over the same. He shall see that the steam pressure does not at any time exceed the limit allowed by the superintendent; he shall frequently try the safety valve and shall not increase the weight on the same; he shall maintain a proper depth of water in each boiler, and if anything should happen to prevent this he shall report it without delay to the superintendent or other person designated by the superintendent and take such other action as may under the circumstances be necessary for the protection of life and the preservation of property.

### Duties of Fan Engineer

Rule 7. The engineer in charge of the ventilating fan at a mine shall keep it running at such speed as the mine foreman shall direct in writing. He shall also examine at the beginning of each shift all the fan bearings, stays and other parts and see that they are kept in proper working order. He shall report promptly to the mine

foreman or assistant mine foreman any defect in the pressure gauge. In case of accident to the boiler or fan machinery, he shall immediately notify the mine foreman or the assistant mine foreman. If only ordinary repairs of the fan or machinery become necessary, he shall await the instructions of the mine foreman or assistant mine foreman before stopping the fan. Should it become impossible to run the fan or become necessary to stop it to prevent its destruction, he shall notify at once the superintendent or mine foreman, who shall give immediate warning to the persons in the mine.

### Duties of Furnaceman

Rule 8. The furnaceman shall be over eighteen years of age and shall attend to his duties with regularity, and in case it is necessary for him to be off duty for any reason whatever he shall give timely notice to the mine foreman.

The furnaceman shall at all times keep a clear, brisk fire and the fire must not be smothered with coal or slack during working hours, and he shall not allow ashes to accumulate excessively on or under the bars or in the approaches to the furnace, and ashes shall be cooled before being removed.

### Duties of Hooker-On

Rule 9. The hooker-on at the bottom of any slope shall be over eighteen years of age, and shall be very careful to see that the cars are properly coupled to a rope or chain and that the safety-catch or other device is properly attached to the rear car, before giving the signal to the engineer. He shall not allow any person to ride up the slope on the full trips other than the trip rider.

### Duties of Cager

Rule 10. The cager at the bottom of any shaft shall be over eighteen years of age. He shall not attempt to withdraw the car until the cage comes to a rest; and when putting the full car on the cage he must be very careful to see that the springs or catches are properly adjusted so as to keep the car in its proper place, before giving the signal to the engineer.

### Duties of Footman

Rule 11. At every shaft or slope where persons are hoisted from the mine a footman (who shall be over twenty-one years of age) shall be designated by the mine foreman. He shall be at his proper place from the time that persons begin to descend until all the persons who may be at the bottom of said shaft or slope, when quitting work at the end of the day, shall be hoisted. The footman shall personally attend to the signals and see that the provisions of this act in respect to hoisting persons in shafts or slopes are complied with.

The footman shall not allow any tools to be placed on the same cage with men or boys or on either cage when they are being hoisted out of the mine, except for the purpose of repairing the shaft or machinery therein. The men shall place their tools in cars pro-

vided for that purpose, which cars shall be hoisted before or after the men have been hoisted. He shall see that no driver or other person ascends the shaft with any horse or mule, unless the said horse or mule is secured in a suitable box or safely penned, and only the driver in charge of said horse or mule shall accompany it in any case. The footman shall immediately inform the mine foreman of any violation of this rule or of general rule fifteen.

### Duties of Topman

Rule 12. At every shaft or slope where persons are lowered into the mine a topman or trip rider (who shall be over twenty-one years of age) shall be designated by the superintendent or mine foreman. He shall be at his proper place from the time that persons begin to descend until all the persons who may be at the bottom of the shaft or slope, when quitting work at the end of the day, shall be hoisted. The topman or trip rider shall personally attend to the signals and see that the provisions of this act in respect to lowering persons in shafts or slopes are complied with.

The topman shall not allow any tools to be placed on the same cage with men or boys or on either cage when persons are being lowered into the mine, except for the purpose of repairing the shaft or the machinery therein. The men shall place their tools in cars provided for that purpose, which cars shall be lowered before or after the men have been lowered.

He shall also see that no driver or other person descends the shaft with any horse or mule, unless the said horse or mule is secured in a suitable box or safely penned, and only the driver in charge of said horse or mule shall accompany it in any case.

The topman of a slope or incline plane shall be careful to close the safety block or other device as soon as the cars have reached the landing, in order to prevent any loose or runaway cars from descending the slope or incline plane, and in no case shall said safety block or other device be withdrawn until the cars are coupled to the rope or chain and the proper signal given. He shall carefully inspect each day all the machinery in and about the check house and the rope used for lowering the coal, and shall promptly report to the superintendent any defect discovered, and shall use care in attaching securely the cars to the rope and in lowering them down the incline. He shall ring the alarm bell in case of accident and when necessary immediately set free to act the drop logs or safety switch.

The topman of a shaft shall see that the springs or keeps for the cage to rest upon are kept in good working order and when taking the full car off he must be careful that no coal or other material is allowed to fall down the shaft.

It shall be the duty of the topman to report to the superintendent any violation of general rule fifteen of this article.

### General Rules

Rule 1. No unauthorized person shall enter the mine without permission from the superintendent.

Rule 2. No person in a state of intoxication shall be allowed to go into or loiter about the mine.

Rule 3. No person shall be employed to blast coal, rock or slate unless the mine foreman is satisfied that he is qualified by experience to perform the work with ordinary care.

Rule 4. No inexperienced person shall be employed to mine out pillars unless in company with one or more experienced miners and with their consent.

Rule 5. Every workman employed in the mine shall examine his working place before commencing work, and after any stoppage of work during the shift he shall repeat such examination.

Rule 6. Every workman when engaged shall have his attention directed to the general and special rules contained in this act by the person employing him. Said rules shall be posted at a conspicuous place at or near the main entrance to the mine and shall be printed in the various languages of the employes.

Rule 7. All employes shall notify the mine foreman or the assistant mine foreman of the unsafe condition of any working place, hauling roads or travelingways, or of damage to doors, brattices or stoppings, or of obstructions in the air passages, when said conditions are known to them.

Rule 8. No person shall be allowed to travel on foot to and from his work on any hoisting slope, incline plane, dilly or locomotive road unless no other roads are provided for that purpose.

Rule 9. No person shall ride upon or against any loaded car or cage in any shaft or slope in any mine. No person other than the trip rider shall be permitted to ride on empty trips on any slope, incline plane or dilly road when the speed of the cars exceeds eight miles an hour.

Rule 10. No person other than the driver or trip rider shall be allowed to ride on the full cars.

Rule 11. Any person who shall deface, pull down or destroy any notice, board, danger signal, general or special rules, record books or mining laws, shall be prosecuted by the superintendent as provided for in section two of article twenty-six of this act.

Rule 12. All persons are forbidden to meddle or tamper in any way with any electric or signal wires in or about the mine.

Rule 13. No powder or high explosive shall be taken into the mine at one time by any one person in greater quantities than is required for use in one shift and the quantity shall never exceed five pounds, except as provided in article sixteen, section one. All powder shall be carried into the mine in metallic cans or canisters or in receptacles of equally safe material.

Rule 14. No explosive shall be stored in any tippie or weighing office and no naked lights shall be used while the attendant is weighing and giving out explosives.

Rule 15. No greater number of persons shall be lowered or hoisted at any one time in any shaft or slope than is permitted by the inspector, and whenever the said number of persons returning from work shall arrive at the bottom of the shaft or slope in which persons are regularly hoisted or lowered, they shall be promptly furnished with an empty cage or car and be hoisted to the surface, and in cases of emergency a less number than the permitted number shall be promptly hoisted.

Any person crowding or pushing to get on or off the cage or car thereby endangering life shall be deemed guilty of a misdemeanor,

and the superintendent shall prosecute him in accordance with section two of article twenty-six of this act, when the matter is reported to him by the topman or footman.

Rule 16. No safety lamp shall be entrusted to any person for use in a mine until said person has given satisfactory evidence to the mine foreman that he understands the proper use thereof and the danger of tampering with the same.

Rule 17. No one except a person duly authorized by the mine foreman shall have in his possession a key or other instrument for the purpose of unlocking any safety lamp in any mine where locked safety lamps are used. Other persons having keys or other instruments for the opening of safety lamps shall be prosecuted by the superintendent in accordance with section two of article twenty-six of this act.

Rule 18. In the cutting of clay veins, spars or faults, entries or other narrow workings, going into the solid coal, in mines wherein explosive gas is generated in dangerous quantities, a bore hole shall be kept not less than three feet in advance of the face of the work or three feet in advance of any shot hole drilled for a blast to be fired in.

Rule 19. An accumulation of gas in a mine shall not be removed by brushing or when persons in the mine may be endangered thereby.

Rule 20. When gas is ignited by a blast or otherwise the person having charge of the place where the said gas is ignited, shall immediately extinguish it, if possible, and if unable to do so he shall immediately notify the mine foreman or the assistant mine foreman of the fact. Miners must see that no gas blowers are left burning upon leaving their working places. It shall be the duty of the superintendent to prosecute any person for violating this rule, as provided for in section two of article twenty-six of this act.

Rule 21. When a miner or shot-firer is about to fire a blast he shall be careful to notify all persons who may be endangered thereby and shall give sufficient alarm so that any person approaching may be warned of the danger.

Rule 22. Whenever a miner or shot-firer shall open a box containing powder or other explosives, or while in any manner handling the same, he shall first place his lamp not less than five feet from such explosive and in such a position that the air current cannot convey sparks to the explosive, and he shall not smoke while handling explosives.

Rule 23. In charging and tamping a hole for blasting no person shall use any iron or steel needle. The charger or tamping bar shall be of wood or tipped with copper.

Rule 24. No explosive shall be forcibly pressed into a hole that is of insufficient size, and when a hole has been charged the explosive shall not be taken out, and no hole shall be bored for blasting at a distance of less than twelve inches from any hole when the charge has misfired.

Rule 25. In gaseous mines shot firers or other persons charging holes for blasting shall use incombustible material for tamping. All holes before being fired shall be solidly tamped the full length of the hole. Any person who violates this rule shall be deemed guilty of a misdemeanor.

Rule 26. Every abandoned slope, shaft, air hole or drift shall be properly fenced around or across its whole entrance.

Rule 27. No person shall go into an old or abandoned part of any mine or into any other place that is not in actual course of working, without permission from the mine foreman, and no person shall travel to and from his work except by the traveling way assigned for that purpose. It shall be the duty of the mine foreman to prosecute all persons who violate this rule, in accordance with section two of article twenty-six of this act.

Rule 28. Workmen and all other persons are expressly forbidden to commit any nuisances or throw into, deposit or leave coal or dirt, stones or other rubbish in the airway or road so as to interfere with, pollute or hinder the air passing into and through the mine.

Rule 29. No steam pipes through which high pressure steam is conveyed for the purpose of driving pumps or other machinery shall be laid on traveling or haulage ways, unless they are encased in asbestos or some other suitable non-conducting material or so placed that the radiation of heat into the atmosphere of the mine will be prevented as far as possible.

Rule 30. When a steam locomotive is used for the purpose of hauling coal out of a mine, the tunnel or tunnels through which the locomotive passes shall be properly ventilated and kept free as far as practicable of noxious gases, and a ventilating apparatus shall be specially provided by the operator to produce such ventilation.

Rule 31. In all shafts and slopes where persons, coal or other materials are hoisted by machinery, the following code of signals shall be used:

One rap or whistle to hoist coal.

One rap or whistle to stop car or cage when in motion.

Two raps or whistles to lower car or cage.

Three raps or whistles to hoist persons. The engineer shall signal back when ready, after which the person shall get on the car or cage and then one rap shall be given to hoist.

Four raps or whistles to turn on steam to the pumps.

Rule 32. No person shall carry any matches, pipes or other smokers' articles into a mine or part of a mine worked exclusively with locked safety lamps, nor shall he have any of said articles in his possession while in such a mine.

Rule 33. If any person shall receive any injury in or about the mine and the same shall come within the knowledge of the mine foreman, and if he shall be of the opinion that the injured person requires medical or surgical treatment, he shall see that said injured person receives treatment, and in case of inability of such person to pay therefor the expense shall be borne by the county.

Rule 34. The special and general rules in the various languages, and all books, blank forms and notices mentioned in this act, shall be printed at the expense of the state and shall be furnished to the operators by the Department of Mines through the inspectors, and all record books shall at all times be accessible to the inspector.

Rule 35. Every person who contravenes or does not comply with any of the special and general rules in this act shall be deemed guilty of a misdemeanor.

## ARTICLE XXVI

## Penalties for Violations of This Act

Section 1. Any person who shall intentionally or carelessly injure any safety lamp, instrument, air course or brattice or without proper authority handle, remove or render useless any fencing, means of signaling, apparatus, instrument or machinery, or shall obstruct or throw open airways, or enter a place in or about a mine against caution, or carry fire, open lights, matches, pipes and other smokers' articles beyond any station inside of which locked safety lamps are used, or open a door in the mine and not close it immediately, or open any door the opening of which is forbidden, or disobey any order given in carrying out the provisions of this act, or do any other act whatsoever whereby the lives or the health of the persons employed, or the security of the mine or the machinery, are endangered, shall be deemed guilty of a misdemeanor and shall be punished as provided in section two of this article.

Section 2. Any person who neglects or refuses to perform the duties required of him by this act, or who violates any of the provisions or requirements thereof, shall be deemed guilty of a misdemeanor and shall upon conviction thereof in the court of quarter sessions of the county in which the misdemeanor was committed be punished by a fine not exceeding two hundred dollars or imprisonment in the county jail for a period not exceeding three months, or both, at the discretion of the court. Any violation of this act which has been declared to be a misdemeanor by any part thereof shall be punished in like manner.

## ARTICLE XXVII

## Inquests

Section 1. Whenever a fatal accident occurs in or about any mine, or whenever an explosion or other serious accident of an unusual nature occurs, whether fatal or not, it shall be the duty of the mine foreman or superintendent in charge of such mine to give notice thereof forthwith by telephone or telegraph to the inspector and also to the coroner of the county, if any person is killed.

Section 2. If the coroner shall determine to hold an inquest, he shall notify the inspector of the time and place of holding the same, and the inspector shall offer such testimony as he may deem necessary to thoroughly inform the said inquest of the cause of the death. He shall also have authority at any time to appear before such coroner or jury and examine or cross-examine any witness. No person who is directly or indirectly interested or employed in any capacity by the person, persons or company owning or operating such mine, or employed in or about any other mine in which such owners or operators may be interested, shall be competent to serve upon such coroner's jury.

Section 3. It shall be the duty of the inspector, upon being notified of any fatal accident as hereinbefore provided, to proceed in person as soon as practicable to the scene of the accident and make such suggestions or give such directions as may appear to him neces-

sary to secure the safety of any person who may still be endangered through said accident. Whether or not the results of the accident require an investigation by the coroner, the said inspector shall proceed to investigate and ascertain the cause of the accident and make a record thereof, which he shall file as provided for; and to enable him to make the investigation he shall have power to compel the attendance of persons to testify and also to administer oaths or affirmations. If it is found upon investigation that the accident is due to the violation of any provisions of this act by any person other than those who may be deceased, the inspector shall institute proceedings against such person or persons as provided for in section two of article twenty-six of this act.

Section 4. The cost of such investigation shall be paid by the county in which the accident occurred in the same manner as costs of inquests held by coroners or justices of the peace are paid.

## ARTICLE XXVIII

### Definitions

Section 1. Mine. In this act the term "mine" includes the shafts, slopes, drifts or inclined planes connected with excavations penetrating coal stratum or strata, which excavations are ventilated by one general air current or divisions thereof, *and connected by one general system of mine railroads over which coal may be delivered to one or more points outside the mine when such is operated by one operator.* The term "mine" shall also apply to shafts being sunk to the coal.

Excavations and Workings. The term "excavations and workings" includes all the excavated parts of a mine, those abandoned as well as the places actually being worked; also all underground workings and shafts, tunnels and other ways and openings; and all such shafts, slopes, tunnels and other openings in the course of being sunk or driven, together with all roads, appliances, machinery and material connected with the same below the surface.

Shaft. The term "shaft" means a vertical opening through the strata that is or may be used for the purpose of ventilation or drainage or for hoisting men or material, or both, in connection with the mining of coal.

Slope. The term "slope" means an incline way or opening used for the same purpose as a shaft. The term "slope" shall also apply to slopes being sunk to the coal.

Operator. The term "operator" means any firm, corporation or individual operating any coal mine or any part thereof.

Superintendent. The term "superintendent" means the person who shall have on behalf of the operator immediate supervision of one or more mines.

Mine Foreman. The term "mine foreman" means the person whom the operator or superintendent shall place in charge of the inside workings of the mine and of the persons employed therein.

Inspector. The term "inspector" means the person appointed by the Governor to have supervision of mines.

Bituminous Mines. The term "bituminous mines" shall include all coal mines in the state not now included in the anthracite boundaries; and wherever the term "mine" appears in this act it shall be construed to mean "bituminous coal mine."

Approved Safety Lamp. The term "approved safety lamp" shall mean such a lamp as approved by the Chief of the Department of Mines and whose approval has not been withdrawn.

The provisions of this act shall not apply to any mine employing less than five persons in any one period of twenty-four hours.

## ARTICLE XXIX

Section 1. All acts or parts of acts inconsistent herewith be and the same are hereby repealed.

---

## PRODUCTION AND ACCIDENTS

When the question of accidents has been treated of heretofore in the annual reports of the Department, it has been the custom to hold up to criticism the companies whose records have been unfavorable. In the report this year while we bestow the usual criticism upon the companies whose records seem to indicate carelessness or lack of intelligence in their management, we also take pleasure in giving commendation to the companies whose exceptionally good records are deserving of attention. Tables designated as Tables of Honor are therefore printed herewith showing the companies that have during a period of years conducted their mines without a single fatal accident or with a very small number of accidents. Every company that produced 400,000 tons or over without a fatal accident is entitled to honorable mention.

Table No. 1 shows the companies that worked for ten years, 1900-1909, without any fatal accidents. The Stineman Coal and Coke Company produced during that time 2,730,355 tons, and many other companies produced a tonnage varying from 291,927 tons to 1,076,271 tons. This is a most remarkable record.

Table No. 2 shows the companies that worked for eight or nine years—1901-1909—without any fatal accidents. The production ranges from 331,592 tons to 648,692 tons.

Table No. 3 shows the companies that worked five, six or seven years—1903-1909—without any fatal accidents. The production ranges from 259,093 tons to 1,301,980 tons. The Saltsburg Coal Company produced the latter tonnage and is especially to be commended.

Table No. 4 shows the companies that produced over 300,000 tons per each fatal accident during the ten years—1900-1909. The production in this table ranges from 303,189 tons to 2,522,781 tons. The companies that produced over a million tons per fatal accident are to be congratulated upon their successful management. These companies were Peale, Peacock and Kerr, Blossburg Coal Company, Empire Coal Company, Moshannon Coal Company, John McLeavy and Company, Cymbria Coal Company and Butts Cannel Coal Company. Three companies, Morrisdale Coal Company, Sterling Coal

Company and Jefferson Coal Company, led all the others with a production averaging over 2,341,000 tons per life lost, a record that deserves the highest praise. The average production of all the companies on this table per life lost is 397,016, an average greater than that of Great Britain or of any other country or State for a period of ten years where there is a production of over 300,000,000 tons.

These tables show conclusively the skill and care that have been exercised in operating the mines, and the managers, superintendents and foremen should all be proud of the work they have accomplished.

TABLE OF HONOR NO. 1—1900-1909

| Names of Companies                              | Production |
|-------------------------------------------------|------------|
| Stineman Coal and Coke Co., .....               | 2,730,355  |
| State Line Coal Co., .....                      | 1,076,271  |
| John Langdon, .....                             | 974,561    |
| Keystone Mining Co., .....                      | 947,621    |
| Stewart Iron Co., Limited, .....                | 946,891    |
| Colonial Iron Co., .....                        | 873,964    |
| Acme Coal Mining Co., .....                     | 772,700    |
| W. B. Skelly Coal Co., .....                    | 726,465    |
| Ghem Coal Co., .....                            | 680,205    |
| S. S. Hagerty and Sons, .....                   | 642,100    |
| Gilpin Coal Co., .....                          | 635,335    |
| Bulah Coal Co., .....                           | 590,655    |
| Pine Run Coal and Coke Co., .....               | 565,628    |
| Maher Coal and Coke Co., .....                  | 517,902    |
| B. F. Keister and Co., .....                    | 194,804    |

| Grand totals and averages, ----- | 291             | 82      | 48                   | 32             | 475                     |        | 136,205,695 | 152,424          | 3.12                                 | 286,749                                    | 3.49                                          |

Note: This table shows that in the first nine counties named, 125,803,893 tons of coal were produced by 135,878 inside employees, an average of 925 tons per employee. Of these employees 451 were killed. For each life lost inside the production was 278,944 tons and 3.58 lives were lost for every million tons produced. The other sixteen counties produced only 10,401,802 tons. The number of inside employees was 16,546, and the average production per employee was 629 tons. Of these employees 24 were killed. For each life lost the production was 433,408 tons, and 2.30 lives were lost for every million tons produced. In the first nine counties for every 1,000 persons employed inside 3.32 lives were lost. In the other sixteen counties for every 1,000 persons employed inside only 1.45 lives were lost. The latter record is about as good as that made in any foreign country.

It will be noted that no lives were lost inside the mines in the counties of Huntingdon, Butler, Blair, Bedford, Clinton, Clarion, Lawrence, Greene, Lycoming, Beaver and Bradford. These counties employed inside 4,851 persons and produced 2,710,561 tons. The inspectors, superintendents and foremen of the mines in these counties are to be commended for this excellent showing.

Table 3—Nationality of Employes Killed by Falls

From the statistics received from 98 per cent. of the operators in the bituminous region we estimate that the so-called English speaking employes, including Americans, English, Welsh, Scotch, Irish and Germans, comprise one-third of the inside employes at the present time, and the so-called foreigners or non-English speaking employes, two-thirds. The total number of inside employes in 1909 was 152,424. Of this number 50,808, or 33.33 per cent., may be classed as English speaking employes and 101,616, or 66.67 per cent., as non-English speaking employes.

The proportion of the outside employes is different. The total number of outside employes in 1909 was 33,497, two-fifths of which, 13,399, were English speaking and 20,098, or three-fifths non-English speaking. The figures therefore show that of the total number of employes inside and outside the mines 64,207 were English speaking, and 121,714 non-English speaking, or 34.53 per cent. of the former and 65.47 of the latter.

Table 3 herewith, based upon the figures given above relating to inside employes, shows that 226 non-English speaking employes were killed by falls and only 65 of the English speaking employes. These figures indicate that 77.66 per cent. of the accidents by falls occurred among the non-English speaking employes, and 22.34 per cent. among the English speaking employes. This can be taken as an argument in favor of the statement that the increase in accidents during the past ten years has been due largely to the great proportion of non-English speaking employes inside the mines.

If the accidents by falls were in proportion to the number of persons employed inside, the loss of life among the English speaking miners would have been about 97 instead of 65, and the accidents among the non-English speaking would have been 194 instead of 226. The accidents among the English speaking employes were 32 less than their proportionate number according to the total number employed, and the accidents among the non-English speaking employes were 32 more than their proportionate number according to the total number employed.

The Table also shows that of the 226 fatal accidents among non-English speaking employes, 178, or 78.76 per cent., occurred at or near the face of the workings; 34, or 15.04 per cent., while the employes were removing pillars, and 14, or 6.20 per cent., while the employes were repairing roadways or while they were going to or from work. Also that of the 65 fatal accidents among the English speaking employes, 41, or 63.08 per cent., occurred at or near the face of the workings; 10, or 15.38 per cent. while the employes were removing pillars, and 14, or 21.54 per cent., while the employes were repairing roadways or while they were going to or from work.

These figures indicate that a larger percentage of English speaking employes is employed in removing pillars and repairing roadways than of non-English speaking employes. Taking into account the total number of inside accidents by falls it is seen that 219, or 75.26 per cent., occurred at or near the face; 44, or 15.12 per cent., while the employes were removing pillars, and 28, or 9.62 per cent., while the employes were repairing roadways or while they were going to or from work.

TABLE 3—Nationality by birth of employes killed by falls, 1909.

\$No fatal accidents.

Note: The attention of operators, managers, superintendents, mine foremen and inspectors is called to this Table. It was originally prepared for the purpose of comparing the fatalities among companies that produced over 100,000 tons, but noting the high percentage of accidents among the smaller companies it was extended to cover all companies regardless of their production. It will be a surprise to note the great number of fatalities among the smaller companies in what are called the "safe" mines in "safe" districts of the several so-called "safe" counties.

The Table also shows the number of lives lost inside the mines and the number of lives lost per 1,000,000 tons produced for all companies. It will be seen that all the companies that produced from 500,000 to over 1,000,000 tons show a low rate of mortality per 1,000,000 tons produced, except those that had the misfortune to have explosions of gas and dust. These explosions are noted at the bottom of the Table. The high rate of fatality per 1,000,000 tons among other companies is deplorable, and it is to be hoped that the operator, manager, superintendent and foreman will in future give special care and attention to the matter of safety.

While no company escaped loss of life during both years, many of them escaped with accidents in one year only.

TABLE AA

Number of tons of coal mined and tons of coke produced, number of days worked, number of persons employed, number killed and injured, quantity of explosives used, etc., 1909

| Districts           | Number of tons of coal shipped to market | Number of tons used at mines for steam and heat | Number of tons sold to local trade and used by employees | Total production of coal in tons of 2,000 pounds | Total production of coke in tons | Tons of coal used in manufacture of coke | Number of coke ovens | Average number of days worked | Number of employees | Number of fatal accidents | Number of non-fatal accidents | Explosives                        |                                                      |                                   |                                                      | Number of horses and mules |

Widows, 270. Orphans, 613.

The above table shows that 61.26 per cent. of the lives lost inside the mines were lost through falls; 17.26 by cars; 10.11 by explosions of gas and dust, and 4.63 by electricity. These four causes were responsible for 98.26 per cent. of the fatal accidents inside the mines.

The accidents by falls and cars should be reduced at least one-half, while the fatal accidents from electricity should be entirely eliminated. The accidents outside should be reduced at least one-half, and there is no valid reason why 24 persons should be killed on the surface by cars and machinery. With the proper effort on the part of the officials and employees the accidents can be reduced, as suggested.

TABLE C  
Causes of non-fatal accidents in and about the mines and number attributable to each cause, 1909

The above table shows that 85.90 per cent. of the non-fatal accidents inside the mines were due to falls and cars, and 69.23 per cent. of the accidents outside to machinery.

The accidents by falls, cars and machinery can be reduced at least one-half if the officials and the employees will exercise proper care.

TABLE D  
Number of gaseous and non-gaseous mines in operation, number of foremen, assistants and fire-bosses, production and percentage of production from gaseous and non-gaseous mines by districts, 1909

| Districts                     | Gaseous Mines                        |                        |                                  |                       | Non-Gaseous Mines                        |                        |                                  | Production from gaseous mines | Production from non-gaseous mines | Percentage of production from gaseous mines | Percentage of production from non-gaseous mines |

\*Three inspectors took office October 1. Data given for last three months of year.

TABLE N

Mines using mining machines, number of machines and motive power used to operate them, and tons of coal produced by machines, in each district, 1909

| Districts    | Number of mines in which machines are used | Number of machines operated by electricity | Number of machines operated by compressed air | Total number of mining machines | Production of coal in tons | Tons produced by pick mining | Tons produced by compressed air machines | Tons produced by electric machines | Percentage by pick mining | Percentage by compressed air machines | Percentage by electric machines |

| Eighteenth,  | 9                                          | 2                                          | 74                                            | 76                              | 3,053,369                  | 2,639,960                    | 410,608                                  | 2,941                              | 86.46                     | 13.45                                 | .09                             |

|               |     |       |       |       |             |            |            |            |       |       |       |
|---------------|-----|-------|-------|-------|-------------|------------|------------|------------|-------|-------|-------|
| Nineteenth,   | 18  | 90    | 140   | 230   | 7,920,205   | 4,061,847  | 1,722,279  | 2,136,079  | 51.28 | 21.75 | 26.97 |
| Twentieth,    | 16  | 126   | 150   | 276   | 5,575,644   | 3,750,731  | 943,013    | 881,900    | 67.27 | 16.91 | 15.82 |
| Twenty-first, | 23  | 175   | 9     | 184   | 7,906,944   | 2,604,669  | 145,394    | 5,156,881  | 32.94 | 1.84  | 65.22 |
| Totals,       | 521 | 1,924 | 3,413 | 5,372 | 136,205,695 | 76,320,132 | 28,832,604 | 31,052,959 | 56.03 | 21.17 | 22.80 |

Note: The above table shows that the percentage of coal mined by pick was 56.03, by compressed air 21.17 and by electricity 22.80. In 1901 the percentages were, pick 63.80, compressed air 21.19, electricity 15.01. These figures show a decrease by pick mining of 7.77 per cent., compressed air machines .02 per cent., and an increase by electric machines of 7.79 per cent. Production by pick mining predominates in the Second, Third, Fifth, Sixth, Eighth, Ninth, Tenth, Eleventh, Fifteenth, Sixteenth, Eighteenth, Nineteenth and Twentieth districts; production by electric machines predominates in the First, Seventh, Thirteenth, Seventeenth and Twenty-first districts, and production by compressed air machines predominates in the Fourth, Twelfth and Fourteenth districts. It will be noted that electricity is the chief motive power for producing coal in a few of the most dangerous districts and pick mining the chief power in several of the other dangerous districts, while compressed air is used to some extent in all the districts.

TABLE O

Production of coal by pick mining, compressed air and electric power, 1901-1909

| Years       | Pick       | Percentages | Compressed air machines | Percentages | Electric machines | Percentages | Total production |
|-------------|------------|-------------|-------------------------|-------------|-------------------|-------------|------------------|
| 1901, ----- | 51,621,167 | 63.80       | 17,145,799              | 21.19       | 12,147,270        | 15.01       | 80,914,236       |
| 1902, ----- | 62,203,097 | 63.13       | 17,945,432              | 18.21       | 18,380,593        | 18.66       | 98,529,122       |
| 1903, ----- | 65,162,906 | 62.83       | 20,106,840              | 19.39       | 18,444,236        | 17.78       | 103,713,982      |
| 1904, ----- | 61,096,511 | 61.34       | 20,904,575              | 20.99       | 17,599,081        | 17.67       | 99,600,167       |
| 1905, ----- | 68,900,085 | 57.73       | 26,805,191              | 22.46       | 23,656,238        | 19.81       | 119,361,514      |

# BITUMINOUS DISTRICTS

---

## ***FIRST DISTRICT***

---

WASHINGTON, ALLEGHENY AND WESTMORELAND COUNTIES

---

Monongahela, Pa., February 5, 1910.

Hon. James E. Roderick, Chief of Department of Mines:

Sir: I herewith transmit my annual report of the First Bituminous District for the year ending December 31, 1909.

I was transferred to this district July 1, 1909, from the Eleventh District.

The report contains the usual tables and statistics, remarks concerning the condition and improvements of the mines, the report of the annual examination of candidates for mine foremen's and fire bosses' certificates, and also a report of legal proceedings.

Respectfully submitted,

ALEXANDER McCANCH, Inspector.

## SUMMARY OF STATISTICS

|                                                                       |           |
|-----------------------------------------------------------------------|-----------|
| Number of mines, .....                                                | 34        |
| Number of mines in operation, .....                                   | 31        |
| Number of tons of coal shipped to market, .....                       | 5,225,041 |
| Number of tons used at mines for steam and heat, ....                 | 109,690   |
| Number of tons sold to local trade and used by employes,              | 36,939    |
| Number of tons used in the manufacture of coke, .....                 | 398,271   |
| Number of tons of coal produced, .....                                | 5,769,941 |
| Number of tons of coke produced, .....                                | 204,283   |
| Number of coke ovens, .....                                           | 498       |
| Number of coke ovens in operation, .....                              | 498       |
| Number of tons of coal produced by pick mining, .....                 | 1,274,838 |
| Number of tons produced by compressed air machines, ...               | 71,807    |
| Number of tons produced by electrical machines, .....                 | 4,423,296 |
| Number of persons employed inside of mines, .....                     | 7,250     |
| Number of persons employed outside, including coke<br>workers, .....  | 1,156     |
| Number of persons employed at manufacture of coke, ...                | 185       |
| Number of fatal accidents inside of mines, .....                      | 26        |
| Number of fatal accidents outside, .....                              | —         |
| Number of non-fatal accidents inside of mines, .....                  | 69        |
| Number of non-fatal accidents outside, .....                          | 2         |
| Number of tons of coal produced per fatal accident inside,            | 221,920   |
| Number of persons employed per fatal accident inside, ..              | 279       |
| Number of persons employed per fatal accident outside, ..             | —         |
| Number of persons employed per non-fatal accident inside,             | 105       |
| Number of persons employed per non-fatal accident out-<br>side, ..... | 578       |
| Number of wives made widows, .....                                    | 17        |
| Number of children made orphans, .....                                | 39        |
| Number of steam locomotives used inside of mines, ....                | —         |
| Number of steam locomotives used outside, .....                       | —         |
| Number of compressed air locomotives used inside, .....               | 10        |
| Number of compressed air locomotives used outside, ....               | —         |
| Number of electric motors used inside, .....                          | 82        |
| Number of electric motors used outside, .....                         | 8         |
| Number of fans in use, .....                                          | 31        |
| Number of furnaces in use, .....                                      | 2         |
| Number of gaseous mines in operation, .....                           | 28        |
| Number of non-gaseous mines in operation, .....                       | 3         |
| Number of new mines opened, .....                                     | —         |
| Number of old mines abandoned, .....                                  | —         |

## TABLE A

## PRODUCTION OF COAL.

| Names of Operators                                          | Tons             |
|-------------------------------------------------------------|------------------|
| Pittsburg-Westmoreland Coal Company, .....                  | 1,521,406        |
| Ellsworth Collieries Company, .....                         | 1,369,038        |
| Monongahela River Consolidated Coal and Coke Company, ..... | 957,499          |

| Date of accident | Name of Person         | Nationality    | Occupation    | Age | Married or single | Number of widows | Number of orphans | Name of Mine          | County            | Nature and Cause of Accident in Brief                                                                                                      |
|------------------|------------------------|----------------|---------------|-----|-------------------|------------------|-------------------|-----------------------|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| July 19          | Fred Rossini, -----    | Italian, ---   | Loader, ----- | 25  | M.                | 1                | 2                 | Ellsworth No. 2, ---  | Washington, ---   | Fatally injured by fall of coal while loading coal at the face.                                                                            |
| 22               | Andy Framos, -----     | Polish, ---    | Miner, -----  | 19  | S.                | ---              | ---               | Rachel, -----         | Washington, ---   | Fatally injured by fall of slate at face of entry while preparing to set a post.                                                           |
| Aug. 20          | Robert Todd, -----     | Scotch, ---    | Company man   | 37  | M.                | 1                | 4                 | Sunnyside, -----      | Allegheny, ---    | Fatally injured by coming in contact with an electric wire while repairing signal line the dilly road.                                     |
| 28               | James Obatwick, -----  | Slavonian, --- | Loader, ----- | 27  | S.                | ---              | ---               | Charleoi No. 2, ---   | Washington, ---   | Instantly killed by fall of draw slate at face of entry.                                                                                   |
| Oct. 6           | Mike Cherinel, -----   | Russian, ---   | Loader, ----- | 28  | M.                | 1                | 2                 | Ellsworth No. 1, ---  | Washington, ---   | Fatally injured by fall of slate at face of room.                                                                                          |
| 11               | Sallo Lazenko, -----   | Russian, ---   | Loader, ----- | 25  | S.                | ---              | ---               | Hazel Kirk No. 2, --- | Washington, ---   | Killed by fall of slate at face of room while knocking coal.                                                                               |
| 15               | August Angelo, -----   | Italian, ---   | Miner, -----  | 35  | M.                | 1                | 1                 | Catsburg, -----       | Washington, ---   | Instantly killed by coming in contact with an electric wire on the dilly road while on his way out of the mine.                            |
| 22               | Joe Kindra, -----      | Slavonian, --- | Company man   | 30  | M.                | 1                | 3                 | Ellsworth No. 2, ---  | Washington, ---   | Fatally injured by being caught between an electric locomotive and the entry pillar.                                                       |
| 30               | Samuel Kragunes, ----- | Slavonian, --- | Miner, -----  | 32  | M.                | 1                | 2                 | Equitable, -----      | Westmoreland, --- | Instantly killed by fall of coal at face of a pillar while undermining.                                                                    |
| Nov. 11          | Joe Martack, -----     | Slavonian, --- | Company man   | 32  | M.                | 1                | ---               | Ellsworth No. 1, ---  | Washington, ---   | Fatally injured by being crushed between the end of an empty trip of mine cars and an electric locomotive, on one of the main passageways. |
|                  | Mike Cedat, -----      | Russian, ---   | Miner, -----  | 25  | S.                | ---              | ---               | Ellsworth No. 1, ---  | Washington, ---   | Fatally injured by being crushed between the end of mine car and the face of entry.                                                        |

|         |                      |                  |                |    |      |   |                  |                  |                                                                                             |
|---------|----------------------|------------------|----------------|----|------|---|------------------|------------------|---------------------------------------------------------------------------------------------|
| Nov. 20 | Thomas Hunter, ----- | English, ----    | Fire boss, --- | 44 | M. 1 | 3 | Budd, -----      | Westmoreland, -- | Fatally injured by fall of rock on one of the main passage-ways while trying to set a post. |
| 27      | John Bulsack, -----  | Lithuanian, ---- | Loader, -----  | 42 | M. 1 | 4 | Charleroi No. 2, | Washington, ---  | Instantly killed by fall of slate at face of room while knocking coal.                      |

TABLE 5—Non-Fatal Accidents Inside and Outside of Mines

| Date of accident | Name of Person           | Nationality     | Occupation       | Age | Married or single | Name of Mine          | County            | Nature and Cause of Accident in Brief                                                             |
|------------------|--------------------------|-----------------|------------------|-----|-------------------|-----------------------|-------------------|---------------------------------------------------------------------------------------------------|
| Jan. 4           | Julien Eliowe, -----     | Belgian, ----   | Miner, -----     | 45  | S.                | Irons No. 1, -----    | Westmoreland, --- | Ankle sprained by foot being caught in a road switch.                                             |
| 13               | Felix Sanovitch, -----   | Russian, ---    | Miner, -----     | 48  | M.                | Ellsworth No. 1, ---  | Washington, ----  | Body injured in various places by fall of slate at face of working place.                         |
| 19               | Mike Marshal, -----      | Belgian, ----   | Miner, -----     | 40  | M.                | Irons No. 1, -----    | Westmoreland, --- | Thumb injured by being caught between a piece of slate and a mine prop, at face of working place. |
| Feb. 5           | John Jacob, -----        | Lithuanian, --- | Company man, --- | 23  | S.                | Ellsworth No. 1, ---  | Washington, ----  | Thigh fractured by being caught by an empty mine car at the shaft bottom.                         |
| 8                | Blot Idot, -----         | Slavonian, ---  | Miner, -----     | 32  | M.                | Irons No. 1, -----    | Westmoreland, --- | Foot bruised by being struck by piece of falling slate at face of working place.                  |
| March 11         | Joseph Vallet, -----     | Italian, ----   | Loader, -----    | 18  | S.                | Black Diamond, ---    | Washington, ----  | Arm fractured by fall of slate at face of working place.                                          |
| 16               | Belo Rody, -----         | French, ----    | Miner, -----     | 34  | S.                | Irons No. 1, -----    | Westmoreland, --- | Leg injured by falling post at face of working place.                                             |
| 17               | Bert Barke, -----        | American, ---   | Loader, -----    | 48  | S.                | Gallatin, -----       | Allegheny, -----  | Leg cut by fall of roof on one of the main entries.                                               |
| 23               | John McGurky, -----      | Irish, ----     | Loader, -----    | 45  | S.                | Shoenberger, ---      | Washington, ----  | Back injured by fall of roof at face of room.                                                     |
|                  | John Gasto, -----        | Russian, ---    | Loader, -----    | 31  | M.                | Huston Run, -----     | Washington, ----  | Leg broken by fall of slate at face of entry.                                                     |
|                  | William Stankus, -----   | Russian, ---    | Loader, -----    | 42  | M.                | Huston Run, -----     | Washington, ----  | Foot broken by fall of slate at face of entry.                                                    |
| 24               | Frank Butler, -----      | Lithuanian, --- | Company man, --- | 26  | M.                | Rachel, -----         | Washington, ----  | Leg fractured by being caught between mine cars.                                                  |
| 25               | William Collins, -----   | American, ---   | Miner, -----     | 33  | M.                | Irons No. 1, -----    | Westmoreland, --- | Leg and shoulder injured by fall of slate at face of working place.                               |
| April 17         | Angelo Greeley, -----    | Italian, ----   | Miner, -----     | 40  | M.                | Hazel Kirk No. 2, --- | Washington, ----  | Back injured by a piece of falling slate at face of working place.                                |
| 19               | Cornelius Zettler, ----- | American, ---   | Driver, -----    | 23  | S.                | Hazel Kirk No. 2, --- | Washington, ----  | Foot bruised by being run over by mine car.                                                       |

|          |                         |                   |                       |    |                            |                     |                                                                               |
|----------|-------------------------|-------------------|-----------------------|----|----------------------------|---------------------|-------------------------------------------------------------------------------|
| April 21 | Edward Walters, -----   | American, -----   | Doorboy, -----        | 17 | S. Banner, -----           | Washington, -----   | Hip injured by being caught between mine cars on the entry.                   |
| 26       | Joseph Hrebick, -----   | Slavonian, -----  | Miner, -----          | 32 | M. Irons No. 1, -----      | Westmore and, ----- | Head cut by a piece of falling slate at face of working place.                |
| 28       | A. J. Kavanagh, -----   | Irish, -----      | Driver, -----         | 44 | M. Shoenberger, -----      | Washington, -----   | Leg fractured by being caught by mine car on the entry.                       |
| 30       | John Butnolovich, ----- | Polish, -----     | Loader, -----         | 40 | M. Ellsworth No. 1, -----  | Washington, -----   | Ankle fractured by fall of roof at face of room.                              |
| May 14   | Daniel Koots, -----     | Slavonian, -----  | Miner, -----          | 28 | M. Irons No. 1, -----      | Westmoreland, ----- | Hand injured by a pick.                                                       |
| 17       | Jacob Kramer, -----     | Slavonian, -----  | Machine runner, ----- | 38 | M. Mougah, -----           | Alleguheny, -----   | Arm cut off by being caught in the bitts of a mining machine.                 |
| 22       | John Schorchilli, ----- | Polish, -----     | Loader, -----         | 40 | M. Banner, -----           | Washington, -----   | Leg and rib broken by being struck by post and fall of slate at face of room. |
| 24       | George Loverick, -----  | Slavonian, -----  | Loader, -----         | 23 | S. Hazel Kirk No. 1, ----- | Washington, -----   | Head injured by falling on a piece of coal at face of working place.          |
| June 1   | L. Hilty, -----         | American, -----   | Company man, -----    | 40 | M. Shoenberger, -----      | Washington, -----   | Leg broken by being caught between mine car and electric locomotive.          |
| 4        | Peter Sock, -----       | Russian, -----    | Miner, -----          | 23 | M. Acme No. 1, -----       | Washington, -----   | Leg bruised by being caught between mine cars.                                |
| 10       | Alex. Egnot, -----      | Russian, -----    | Miner, -----          | 33 | M. Acme No. 1, -----       | Washington, -----   | Pelvis bone fractured by fall of slate at face of working place.              |
| 11       | Robert Paterson, -----  | American, -----   | Loader, -----         | 42 | S. Hazel Kirk No. 1, ----- | Washington, -----   | Thigh broken by fall of roof at face of room.                                 |
| 12       | August Peoline, -----   | Italian, -----    | Loader, -----         | 40 | M. Shoenberger, -----      | Washington, -----   | Arm broken by fall of slate at face of room.                                  |
| 18       | Mike Gracosky, -----    | Polish, -----     | Miner, -----          | 42 | M. Acme No. 1, -----       | Washington, -----   | Hip bruised by fall of slate at face of working place.                        |
| 28       | Frantz Joseph, -----    | Slavonian, -----  | Loader, -----         | 40 | M. Shoenberger, -----      | Washington, -----   | Back injured by fall of slate at face of room.                                |
| July 14  | Joseph Baylo, -----     | Slavonian, -----  | Loader, -----         | 40 | S. Ellsworth No. 3, -----  | Washington, -----   | Leg broken by fall of slate at face of room.                                  |
| 15       | Charles Utell, -----    | Lithuanian, ----- | Miner, -----          | 28 | S. Black Diamond, -----    | Washington, -----   | Back injured by fall of roof at face of pillar.                               |
|          | John Chaperoui, -----   | Lithuanian, ----- | Miner, -----          | 34 | S. Black Diamond, -----    | Washington, -----   | Leg broken by fall of roof at face of pillar.                                 |
| 24       | James Gass, -----       | Italian, -----    | Miner, -----          | 28 | S. Hazel Kirk No. 2, ----- | Washington, -----   | Leg crushed by being run over by mine car on one of the main passage-ways.    |
| 27       | John Rehula, -----      | Russian, -----    | Loader, -----         | 30 | S. Charleroi No. 2, -----  | Washington, -----   | Hip broken by fall of slate at face of room.                                  |
| * 28     | Peter Nacko, -----      | Polish, -----     | Miner, -----          | 46 | M. Ellsworth No. 3, -----  | Washington, -----   | Leg fractured by fall of coal at face of pillar.                              |
|          | Frank Kelly, -----      | American, -----   | Machine runner, ----- | 32 | S. Charleroi No. 2, -----  | Washington, -----   | Leg broken by fall of slate at face of working place.                         |
| Aug. 4   | John Collick, -----     | Slavonian, -----  | Miner, -----          | 33 | M. Cincinnati, -----       | Washington, -----   | Leg injured by fall of slate at face of working place.                        |
|          | Edward Warkey, -----    | Slavonian, -----  | Loader, -----         | 43 | M. Hazel Kirk No. 1, ----- | Washington, -----   | Leg and rib broken by fall of slate at face of room.                          |
| 8        | Staney Zelinski, -----  | Slavonian, -----  | Miner, -----          | 48 | M. Shoenberger, -----      | Washington, -----   | Leg fractured by fall of roof at face of pillar.                              |

| 30      | Mike Dintoki, -----     | Italian, -----  | Laborer, -----     | 26 | M. Ellsworth No. 2, ----- | Washington, -----   | Internally injured by being caught between mine car and floor of tibble. Outside.             |

## CONDITION OF MINES

## PITTSBURG-WESTMORELAND COAL COMPANY

Acme Nos. 1 and 2.—Ventilation is good in some parts and fair in other parts. Drainage is good, except at a few points.

Dunkirk.—Ventilation is insufficient and very unsteady owing to the excessive use of doors. The roadways are wet and muddy in various places. Dust is made damp by warming and moistening the entering air with exhaust steam.

Hazel Kirk No. 1.—Ventilation very good. Drainage is good in some parts and poor in other parts. Dust is made damp in the dry portions by moistening the air with steam as it enters the mine.

Hazel Kirk No. 2.—General condition of ventilation and drainage is good. Dust is dampened by moistening the air with steam as it enters the mine.

Hazel Kirk No. 3.—General condition of ventilation and drainage is good. The dust is kept damp by warming and moistening the air with steam.

Shoenberger.—Ventilation is good, except in a small portion of the mine known as First Hill. In this section the ventilation is produced naturally, and cannot be relied upon. The dust, except in one small portion of the mine, is made damp by moistening the air with exhaust steam and water sprays as it enters the mine. The dust in the small portion referred to is watered with the ordinary water box.

## ELLSWORTH COLLIERIES COMPANY

Ellsworth No. 1.—Ventilation is good, except in a few of the entries in the center section of the mine. Drainage is satisfactory. Dust is dampened by moistening the air with steam as it enters the mine, and by the ordinary water box. Water pipes are at present being installed in certain passageways for the purpose of further dampening the dust.

Ellsworth No. 2.—Ventilation good. Drainage satisfactory. Dust is kept moist by warming and moistening the air with exhaust steam as it enters the mine.

Ellsworth No. 3.—Drainage and ventilation are good. Dust is made damp by moistening the ingoing air with steam.

## MONONGAHELA RIVER CONSOLIDATED COAL AND COKE COMPANY

Black Diamond.—Ventilation is good in a few entries, but in the major portion of the mine it is insufficient and very unsteady. Drainage is good. The dust on the floor of the roadways is watered with the old time water box.

Catsburg.—Ventilation is fair in the operating portions. General condition of drainage good. On the roadways the dust is watered with a sprinkling car, which waters the roof and sides and floor.

Coal Bluff.—Ventilation is only fair. Drainage is good. The dust on the floor of the roadways is watered with the ordinary water box.

Cincinnati.—Ventilation is only fair. Drainage excellent. Dust on floor of roadways is watered by water box.

Gallatin.—The ventilation is good in a few entries, but in the greater portion of the workings the air is insufficient. Drainage is excellent. The roof and sides and floor of the passageways are watered by a sprinkling car.

Mongah.—Ventilation is insufficient, except in a small portion of the workings. General condition of drainage is good. Roadways are watered by means of a sprinkling car.

Sunnyside.—Ventilation good, except in some of the advance workings in which the air was not sufficiently circulated to the faces. Drainage is good. Watering of dust is done with the common water box.

#### PITTSBURG COAL COMPANY

Banner, Equitable and Manown are in good condition. Each of these mines is provided with a sprinkling car capable of watering the roof, sides and floor of the entries. Steam is also exhausted into the inlet air at Banner and Equitable.

#### UNITED COAL COMPANY

Ella.—Ventilation and drainage are good. Dust is watered by a sprinkling car and by the old style water box.

#### CHARLEROI COAL WORKS

Charleroi Nos. 1 and 2.—Ventilation is good in some portions and fair in other portions. Drainage and other conditions are good. The dust in No. 2 mine is made moist by a humidifying system placed in the fan drift, consisting of pipes through which live steam is passed, thus heating the air as it enters, and at the same point a number of water spraying devices are constantly moistening the air. Spraying devices are also placed at various points in the interior of the mine, and these further assist in keeping the air in a humid state.

#### YOUGHIOGHENY AND OHIO COAL COMPANY

Budd.—Ventilation is insufficient, except in a small portion. Drainage is good. The dust on the roadways is watered with the regular water box.

#### DIAMOND COAL AND COKE COMPANY

Huston Run.—Ventilation is very poor, except in one pair of entries. Drainage is good.

#### HENDERSON COAL COMPANY

Irons Nos. 1 and 2.—The roadways are wet and muddy in many places, but the ventilation and other conditions are good.

#### PITTSBURG-BUFFALO COMPANY

Rachel and Blanch.—In some parts of the mine the volume of air is very good and in other portions it is only fair, but in all parts the air currents are very constant, maintaining a most excellent sanitary condition. The mine is neat and clean, and rigid regulation is maintained regarding the firing of shots and the watering and wetting of

dust. Water pipes are carried to the face of each entry, and hose connections are so arranged as to make it possible to water wherever desired. Dust is further dampened by a number of water spraying devices placed in the inlet airways. Steam is also exhausted into the downcast shaft in the cold months, and this further assists in keeping the air in a humid state.

#### PEOPLES COAL COMPANY

Clinton.—Ventilation is good on the entries, but very poor at the face of most rooms and pillars. Drainage good, except at a few points.

#### FRED E. HESLEP

Heslep.—Ventilation fair. Drainage good.

#### STAR COAL COMPANY

Star.—Idle.

#### CANE COAL COMPANY

Sterling.—Idle.

#### IMPROVEMENTS

#### PITTSBURG-WESTMORELAND COAL COMPANY

Acme No. 1.—Electric haulage has been replaced by endless rope, with necessary engine, engine room and steam connections, etc. A trestle of steel has been built from the tippie across the railroad track, for the purpose of conveying the mine refuse to a new dumping ground.

Acme No. 2.—Erected steel tippie, coal washery and storage bin. Built three hundred long ovens with necessary machinery, railroad sidings, etc. The washery is built of reinforced concrete, and equipped with Stewart jigs capable of washing 1,800 tons of coal per day. The storage bin is also built of reinforced concrete and has a capacity of 2,000 tons. It is estimated that this plant when in full operation will be capable of producing about 1,000 tons of coke per day.

#### ELLSWORTH COLLIERIES COMPANY

Ellsworth No. 2.—A new steel tippie of modern design and equipped with modern tipping machinery has been erected, replacing an old wooden structure that was destroyed the latter part of the year by fire.

#### UNITED COAL COMPANY

Ella.—Built three overcasts of masonry, dispensing with six doors on the main haulage roads.

#### CHARLEROI COAL WORKS

Charleroi Nos. 1 and 2.—Erected concrete machine shop and power house. Laid main haulage road with 90-pound T rail. Installed three Weimer electric pumps with capacity of 75 gallons; slack conveyor at railroad tippie, and fifty new mine wagons. Placed an ex-

haust steam apparatus at the entrance of the mine in the inlet airway for the purpose of keeping the air in a humid state, assisted by water spraying devices at various points in the airways in the interior of the mine. Placed an auxiliary Stine fan on Maple Creek section, diameter 6 feet, width of blades 1 foot, 6 inches, depth of blades 2 feet, 5 inches. Set derailing device on incline plane. Provided chemical fire engine for fighting mine fires, and three complete Draeger oxygen helmets and recharging apparatus. Built four masonry overcasts, dispensing with all doors on main haulage. Manway on each side of mine placed in first class condition for travel. The use of black blasting powder has been discontinued, and permissible explosives are used, with competent and authorized persons doing all blasting. Locked safety-lamps have replaced open lamps in pillar workings.

#### YOUGIOGHENY AND OHIO COAL COMPANY

Budd.—Installed a 10-foot ventilating fan of the Capell type, 150 horse power Ridgway engine, and 150 horse power boiler. A new generator engine has also been provided.

#### HENDERSON COAL COMPANY

Irons Nos. 1 and 2.—Considerable ditching has been done, dispensing with the use of four pumps. A new check house, 20 by 98 feet, has been built. It is very much larger than the old one and more fully protects the checking machinery and employes in bad weather.

#### Prosecutions for Violations of the Mining Laws

July 20, the following letter was received from Thomas Kearney and Harry Brown:

"Dear Sir: The undersigned do prefer charges against Thomas Gatehouse, mine foreman, also assistant mine foreman, E. Sweet, for taking down danger board and putting men to work in explosive gas, also for firing shots in explosive gas the fourteenth day of July and previous to this time in Rachel mine, Marianna."

Information was made against Thomas Gatehouse, mine foreman at Rachel mine, Pittsburg-Buffalo Company, but assistant mine foreman Sweet was not included, as it was understood that whatever he may have done was done under orders from his superior, Gatehouse. Gatehouse was charged with violation of Section 6 of Article 6 of the Bituminous Mining Law, requiring that the mine foreman shall give prompt attention to the removal of all dangers reported to him by the fire boss; also with violation of the general provisions of Section 1 of Article 21 that forbids the doing of any act whatsoever whereby the lives or health of persons or the security of the miners or machinery are endangered. The case was tried August 19 and 20, and Gatehouse was found guilty. He was sentenced to pay costs and fined \$100.00.

July 29, James Cameron, mine foreman at Mongah mine of the Monongahela River Consolidated Coal and Coke Company, was charged with failing to provide shelter holes on one of the main haulage ways on which persons were required to travel to and from work. He entered a plea of guilty at the September term of court and was sentenced to pay a fine of \$15.00 and costs.

No. 101 November Term. Jonathan Pegford, miner, Charleroi mine, Charleroi Coal Works, was charged with a violation of the mine law in taking an open light into a part of the mine where safety lamps were required to be used, and was found guilty and obliged to pay the costs and expense of the trial.

No. 100 November Term. John Rees, miner, Charleroi mine, Charleroi Coal Works, was charged with a violation of the mine law in taking an open light into a part of the mine where safety lamps were required to be used, and was found guilty and obliged to pay the costs and expense of the trial.

No. 119 November Term. Thomas Patterson, a miner at Hazel Kirk No. 1 mine, of the Pittsburgh-Westmoreland Coal Company, was charged with passing a danger signal and entering a room that was fenced off, without permission, and also with having removed the danger board. The case came to trial November 8, and the defendant plead guilty and was sentenced to pay a fine of \$50.00 and costs.

September 23, Andy Zemack and Dominic Gillis, machine men at Hazel Kirk No. 1 mine, Pittsburgh-Westmoreland Coal Company, were found operating a cutting machine at the face of an entry known as No. 8 Butt off left face and using open lights, although they were at that time beyond a danger signal that plainly set forth that in that part of the mine no open lights were to be used. Information was made against them October 1, and they were arrested and gave bail for court. The case came to trial November 8, and Zemack, who was tried first, was found guilty and sentenced to pay a fine of \$100.00 and costs and undergo imprisonment in the county jail for 60 days. Before the case of Gillis was called to trial, he entered a plea of guilty and was sentenced to pay a fine of \$100.00 and costs and undergo imprisonment in the county jail for 60 days.

December 31, information was made against Thomas Jenkins, mine foreman at the Huston Run mine of the Diamond Coal and Coke Company, charging in substance:

1—Cut-throughs for the purpose of ventilation more than 35 yards apart.

2—Insufficient check doors to conduct ventilation through the cut-throughs.

3—Failure to provide proper shelter holes on animal haulage roads.

4—Failure to provide proper shelter holes on machinery haulage roads.

5—Failure to measure air current once a week.

6—Failure to record air measurements.

7—Permitting more than 65 men to work in the same air current without permission from the mine inspector.

January 17, the defendant appeared before the court, and, after pleading in person and by his counsel that the offence was due to the fact that the mine was new and everything not yet in running order and that he would be careful in every particular to obey the law hereafter and that he had saved the county the trouble and expense of a trial, he was warned by the court of the danger to him of a repetition of the offence and was fined \$1.00 and costs.

December 31, information was made against F. R. Barnum, mine superintendent at the Huston Run mine of the Diamond Coal and Coke Company, charging in substance that Barnum had failed to

provide proper recording instruments for measuring the number of revolutions of the ventilating fan at the mine and the effective ventilating pressure, and also failure to preserve registration of the number of revolutions of the fan and the effective ventilating pressure as required by law. January 17, the defendant appeared before the court, and, after pleading in person and by counsel that the offence was due to the fact that the mine was new and everything not yet in running order, and that this was his first offence and that he had saved the county the trouble and expense of a new trial, he was fined \$1.00 and costs.

Commonwealth ex rel. Alexander McCanch, 1st District, Arthur Neale, 7th District, and F. W. Cunningham, 21st District, vs. Pittsburg-Westmoreland Coal Company and Dunkirk Gas Coal Company, operating Dunkirk mine, Carroll Township, Washington county, Pa. Bill in Equity at No. 1887, Court of Common Pleas of Washington county, sitting in Equity. The bill averred, in substance, an examination of said mine by said Inspectors, and a finding by them that the said mine could not be operated with safety with less than 115,000 cubic feet of air per minute at the ventilator, not less than 60 per cent. being constantly circulated to and about the face of the workings. This was reduced to writing and rendered in the form of a decision, under date of September 22, 1909, delivered to Bradford McIntyre, Superintendent. Seven days elapsed and no appeal taken. After further investigation by Inspectors named, on October 4 and 5, 1909, they were of opinion that immediate danger existed in said mine, and, under date of October 6, 1909, they instructed said Superintendent, in writing, over their signatures, to remove the danger forthwith; and, that it might not be necessary to shut the mine down, suggested that, pending the installation of machinery, etc., the mine might be operated with a reasonable degree of safety by working same exclusively with locked safety lamps, except in certain indicated parts thereof, provided said excepted parts continued to be inlet air ways. On October 11, 1909, said Inspectors again examined the mine and found that the dangerous conditions had not been removed by supplying the air required, nor had the suggestions been adopted. Bill for injunction and other relief filed October 12, 1909. October 12, 1909, rule on defendants, returnable October 14, to show cause why an injunction should not be granted. October 14, 1909, parties conferred at suggestion of Court. October 14, 1909, Decree of Court setting forth agreement of defendants to install the ventilation required by notice of Inspectors within ninety days, pending which mine to be worked in accordance with suggestions made by Inspectors, proceedings to be suspended meanwhile. Defendants to pay costs.

October 2, 1909, Inspector Alexander McCanch, 1st District, wrote to Mr. W. E. Lahm, Superintendent of the Ellsworth Collieries Company, calling his attention to the dangers of the electrical installation in Ellsworth Nos. 3 and 4 mines. Under date of October 6, 1909, Mr. Benjamin Holliday, General Superintendent of the company, wrote Inspector McCanch, informing him that he had been advised by counsel that the company was acting within its rights under a former decision of the Court of Quarter Sessions of Washington county. October 27, 28 and 29, 1909, Inspectors C. B. Ross, 2nd District, T. K. Adams, 3rd District, Elias Phillips, 4th District, Isaac G. Roby, 5th District, Arthur Neale, 7th District, Joseph Knapper, 8th District,

John F. Bell, 13th District, and F. W. Cunningham, 21st District, delegated for the purpose by the Chief of Department of Mines, in conjunction with Inspector McCanch, made an examination of said mines. Then followed conferences among the Inspectors alone, with counsel, and with representatives of the company, and finally the whole matter was settled by an agreement reduced to writing and signed for the company by Benjamin Holliday, General Superintendent, and W. A. James, Chief Engineer, dated November 8, 1909, wherein it was promised and agreed as to the future operation of said mines, as follows, to wit:

"That the main haulage ways of said mines shall be so changed that hereafter they shall be and remain intake air ways; and in all parts of said mines, except such parts of said main haulage ways as shall be within the limits of stations to be established at points to be agreed upon by the Mine Inspector of the district and the Mine Foreman, all electric wires and electric machinery and all other mechanical devices attached thereto and connected therewith shall be constructed and protected and maintained in such a manner as to secure freedom from the emission of sparks or flame therefrom into the atmosphere of said mines.

The changes necessary to carry the foregoing into effect shall be made without more delay than may be absolutely necessary."

November 4, 1909, after careful examination of the Acme mines of the Pittsburgh-Westmoreland Coal Company, located at Bentleyville, Washington county, C. B. Ross, 2nd District, T. K. Adams, 3rd District, Elias Phillips, 4th District, Isaac G. Roby, 5th District, Arthur Neale, 7th District, Joseph Knapper, 8th District, John F. Bell, 13th District, and F. W. Cunningham, 21st District, appointed by the Chief of Department of Mines to act in conjunction with Alexander McCanch, 1st District, in the matter, together with said Inspector McCanch, being agreed in the opinion, after full investigation, that immediate danger existed in said mines by reason of the fact that the wires and machinery and other mechanical devices attached thereto and connected therewith, and employed in said mines, were not constructed and protected in such manner as to secure freedom from the emission of sparks or flame therefrom into the atmosphere of said mines, instructed Mr. Donald Darroch, Superintendent of said mines, in writing, to remove the dangerous conditions forthwith, and gave him notice that an injunction would be applied for should he fail to comply with said notice. Mistaking this notice for a decision under Article XIV of the Bituminous Mining Law, under date of November 12, 1909, the Pittsburgh-Westmoreland Coal Company, by H. K. Knopf, its General Superintendent, petitioned the Court for an allowance to appeal and to appoint a Board to inspect and report, whereupon the Court appointed James Blick, Benjamin Ferriday and Jesse K. Johnson. Before any action was taken by the Board several conferences were held between the Inspectors and their counsel and the officers and representatives of the company and their counsel, and at last the matter was settled by promise given and reduced to writing and signed for the coal company by H. K. Knopf, its General Superintendent, wherein it was promised and agreed as to the future operation of said mines as follows, to wit:

"That in all parts of said mine, except on main intake airways, as indicated by black lines on blue print hereto attached, and between points to be established as developments progress (by agreement be-

tween the Mine Inspector of the district and the mine foremen, *but this exception shall not include any parts of said airways passing active workings, or on butt entries*), all electric wires and electric machinery and all other mechanical devices attached thereto and connected therewith shall be constructed and protected and maintained in such a manner as to secure freedom from the emission of sparks or flame therefrom into the atmosphere of said mine.

The changes necessary to carry the foregoing into effect shall be made without more delay than may be absolutely necessary."

November 22, 1909, it having been made to appear to the Court that a settlement had been effected, the company was permitted to withdraw its appeal and was directed to pay the costs.

## MINE FOREMEN'S EXAMINATIONS

---

The annual examination of applicants for certificates of qualification as Mine Foremen and Fire Bosses was held in Council Chambers, Monongahela, April 6, 7, 8 and 9.

The Board of Examiners was composed of W. H. Howarth, Mine Inspector; John McVicker, Superintendent; and A. N. Jenkins, Mine Foreman.

The following persons having passed a satisfactory examination, were granted certificates as Mine Foremen:

### First Grade

A. M. Harper, Belle Vernon; John Carroll, Monongahela; Dennis A. Kerwin, Elizabeth; Lewis B. Anderson, Monongahela.

## **SECOND DISTRICT**

---

### **WESTMORELAND COUNTY**

---

Greensburg, Pa., February 28, 1910.

Hon. James E. Roderick, Chief of Department of Mines:

Sir: I have the honor to transmit herewith my report as Inspector of Mines of the Second Bituminous District for the year ending December 31, 1909, in compliance with the Acts of Assembly of May 15, 1893, and April 14, 1903.

The report contains the usual tables and statistics, a brief description of the mines and the most important improvements made during the year, a report of the legal proceedings instituted, and a report of the annual examination of applicants for mine foremen's certificates.

Respectfully submitted,

C. B. ROSS, Inspector.

## SUMMARY OF STATISTICS

|                                                                       |           |
|-----------------------------------------------------------------------|-----------|
| Number of mines, .....                                                | 57        |
| Number of mines in operation, .....                                   | 54        |
| Number of tons of coal shipped to market, .....                       | 4,736,052 |
| Number of tons used at mines for steam and heat, ....                 | 235,599   |
| Number of tons sold to local trade and used by employes, .....        | 64,373    |
| Number of tons used in the manufacture of coke, .....                 | 3,652,316 |
| Number of tons of coal produced, .....                                | 8,689,340 |
| Number of tons of coke produced, .....                                | 2,456,311 |
| Number of coke ovens, .....                                           | 5,807     |
| Number of coke ovens in operation, .....                              | 5,174     |
| Number of tons of coal produced by pick mining, .....                 | 7,649,889 |
| Number of tons produced by compressed air machines, ..                | 968,351   |
| Number of tons produced by electrical machines, .....                 | 71,100    |
| Number of persons employed inside of mines, .....                     | 7,026     |
| Number of persons employed outside, including coke<br>workers, .....  | 3,026     |
| Number of persons employed at manufacture of coke, ....               | 1,675     |
| Number of fatal accidents inside of mines, .....                      | 41        |
| Number of fatal accidents outside, .....                              | 3         |
| Number of non-fatal accidents inside of mines, .....                  | 57        |
| Number of non-fatal accidents outside, .....                          | 2         |
| Number of tons of coal produced per fatal accident inside, ..         | 211,935   |
| Number of persons employed per fatal accident inside, ..              | 171       |
| Number of persons employed per fatal accident outside, ..             | 1,009     |
| Number of persons employed per non-fatal accident inside, ..          | 123       |
| Number of persons employed per non-fatal accident out-<br>side, ..... | 1,513     |
| Number of wives made widows, .....                                    | 21        |
| Number of children made orphans, .....                                | 39        |
| Number of steam locomotives used inside of mines, ....                | —         |
| Number of steam locomotives used outside, .....                       | 20        |
| Number of compressed air locomotives used inside, .....               | 24        |
| Number of compressed air locomotives used outside, ....               | —         |
| Number of electric motors used inside, .....                          | 20        |
| Number of electric motors used outside, .....                         | —         |
| Number of fans in use, .....                                          | 49        |
| Number of furnaces in use, .....                                      | 6         |
| Number of gaseous mines in operation, .....                           | 27        |
| Number of non-gaseous mines in operation, .....                       | 27        |
| Number of new mines opened, .....                                     | —         |
| Number of old mines abandoned, .....                                  | —         |

TABLE A

## PRODUCTION OF COAL

| Names of Operators                                 | Tons      |
|----------------------------------------------------|-----------|
| Jamison Coal and Coke Company, .....               | 2,608,205 |
| Keystone Coal and Coke Company, .....              | 1,963,340 |
| Latrobe-Connellsville Coal and Coke Company, ..... | 1,034,105 |

\*Idle.

NOTE.—Where the inlet quantity greatly exceeds the outlet, the difference is caused by, first, broken surface where a force fan is used; second, where the fan engine is not supplied with a governor to regulate the speed of the fan and keep it constant. The latter also applies to where the outlet quantity greatly exceeds the inlet; an exhaust fan is used and the conditions are the same. Where the inlet and outlet quantities are the same, or where the inlet is slightly in excess of the outlet, in the absence of broken surface or a variation of the fan speed, the condition is due to temperature. The outside temperature and that of the mine being equal, and no gases being given off from any part of the mine, the inlet and outlet quantities would of course be equal. Where the mine temperature becomes lower than the outside temperature, the volume at the outlet naturally becomes contracted into less space than that at the inlet which is at a higher temperature, and in the absence of the evolution of any gas from the mine, the outlet quantity becomes less in volume than the inlet. Where the inlet quantity exceeds the outlet with furnace ventilation, the cause is broken surface, which allows the natural conditions (due to a variation of temperature caused by different conditions as they are found to exist) to operate against the furnace.

TABLE J.—Mines using coal cutting machines, power used, geological and local names of seams, thickest and thinnest seams where machines are used, and the approximate number of tons produced by machines

| Names of Operators            | Names of Mines                                     | Kind of opening            | Gaseous or non-gaseous | Number of mining machines used | Power used by machines | Geological and local names of seams | Average thickness in inches |                |                           | Height of Seam in Inches | Approximate number of tons produced by machines |

## CONDITION OF MINES

## JAMISON COAL AND COKE COMPANY

Jamison Nos. 1, 2, 3, 4, 5 and 6.—Conditions good, except as follows: The ventilation should be improved in No. 2 mine at the face of a portion of the workings on Nos. 2 north, and 3 face east entries.

Coal dust is found in some parts of Nos. 1, 2 and 3, particularly at high and dry points on the roadways. It is kept saturated by means of water cars, and is removed from the mines.

A fire was discovered about 2.45 P. M. on November 1st, near the bottom of No. 2 shaft, which destroyed several sets of double timbers and the mine cars in the immediate vicinity. The fire was supposed to have started in a small room in which oil was kept for the oiling of the mine cars about sixty feet from the shaft bottom.

Hoisting coal at the mine had ceased at noon, and the majority of the men were out of the mine when the fire was discovered.

The fan was at once reversed making the hoisting shaft the return, and the second opening or fan shaft an inlet, thus providing means of escape for the men in the mine.

A four-inch pipe line was laid from a reservoir on the surface to the top of the shaft. Later a three-inch line was also laid, and three lines of hose were run from the pumps in the mine to the fire, and about 12 o'clock midnight it was well under control. Five days were required to extinguish the fire and remove the debris before the mine resumed operations. The fire was supposed to have started from an open lamp.

## KEYSTONE COAL AND COKE COMPANY

Hempfield Nos. 1, 2 and 3; Greensburg Nos. 1, 2 and 3, Salem, Carbon, Seaboard, Huron Nos. 1, 2 and 3.—Conditions good except as follows: Better ventilation was needed at the working faces in a portion of the room and pillar work in some parts of Hempfield No. 1.

The dry sections of Greensburg No. 2 are now being piped with one and one-half inch pipe, with hose connections every one hundred feet for the purpose of saturating the dust, which is now being watered by means of a water car. The dust is loaded into cars and removed from the mine after being saturated.

## LATROBE-CONNELLSVILLE COAL AND COKE COMPANY

Saxman, Superior Nos. 1 and 2, Gilson, Derry Nos. 1 and 2 and Millwood.—Ventilation, drainage and other conditions good except as follows: The ventilation at the working faces in a portion of the dip workings in Derry No. 1 should be improved. Derry No. 2 was idle. More shelter holes are needed on A entry in the Millwood mine.

## H. C. FRICK COKE COMPANY

Baggaley, Dorothy and Monastery.—Ventilation, drainage and other conditions good.

## LOYALHANNA COAL AND COKE COMPANY

Loyalhanna Nos. 1 and 2 and Pandora.—In good condition.

## HOSTETTER-CONNELLSVILLE COKE COMPANY

Whitney and Hostetter.—In good condition.

## ATLANTIC CRUSHED COKE COMPANY

Atlantic Nos. 2, 3 and 4.—In good condition.

## DONOHUE COKE COMPANY

Donohoe.—In good condition, except the ventilation in the idle workings which should be improved. This mine in the past produced considerable coal dust in the rise workings, which was controlled by means of a water car. These workings have been worked out and abandoned. The present workings are now very wet.

## LIGONIER COAL COMPANY

Ligonier No. 2.—In good condition.

## LATROBE COAL COMPANY

Latrobe Nos. 1 and 2.—In good condition, except the ventilation in Nos. 21 and 22 entries in No. 1 mine which should be improved.

## SHENANGO FURNACE COMPANY

Wilpen.—In good condition except a part of the main entry where shelter holes have not been provided.

## MOUNT PLEASANT COKE COMPANY

Beatty.—In good condition. The coal dust in this mine is confined to the high and dry points along the roadways, and is watered by means of a truck car on which barrels of water are placed and hose connected after which it is loaded into cars and removed from the mine.

## FORT LIGONIER COAL COMPANY

Fort Ligonier No. 1.—In good condition.

## LIGONIER DIAMOND COAL AND COKE COMPANY

Diamond.—In good condition.

## WHYEL COKE COMPANY

Ellen Nos. 1 and 2.—In good condition.

## COLUMBIA COAL AND COKE COMPANY

Old Colony Nos. 1 and 2.—Conditions good except the ventilation at face of workings in No. 1 and the idle workings in No. 2 which needed improvement.

## UNITY COAL COMPANY

Carney.—In good condition.

## FORT PALMER COAL AND COKE COMPANY

Fort Palmer No. 1.—In good condition.

## UNITY-CONNELLSVILLE COKE COMPANY

Elizabeth.—In fair condition.

## E. A. HUMPHRIES COAL AND COKE COMPANY

Chester No. 2.—In fair condition.

## SOUTH FAYETTE COKE COMPANY

Shirey.—In good condition.

## MARIETTA-CONNELLSVILLE COKE COMPANY

Marietta.—In good condition.

## NORTHERN CONNELLSVILLE COKE COMPANY

Marthabel.—In good condition.

## DARLINGTON COAL COMPANY

Houston.—In fair condition.

## NEW ALEXANDRIA COKE COMPANY

Richard.—In good condition.

## BESSEMER COKE COMPANY

Duquesne.—Idle the entire year.

## IMPROVEMENTS

## JAMISON COAL AND COKE COMPANY

Jamison No. 3.—A new lamp house of tile and concrete has been erected.

Jamison No. 4.—One hundred and eighty-six new coke ovens have been built.

## KEYSTONE COAL AND COKE COMPANY

Hempfield No. 1.—Three brick and concrete overcasts and 104 brick stoppings constructed; one motor generator set and tile building for same; one air compressor installed.

Hempfield No. 2.—The furnace shaft has been lined with brick.

Hempfield No. 3.—Sixty-five brick stoppings were built.

Greensburg No. 1.—One permanent overcast was constructed, and 100 Wolf safety lamps purchased.

Greensburg No. 2.—Four overcasts and twelve stoppings all of a permanent character have been constructed. The outside improvements consist of a lamp house of brick and concrete.

Greensburg No. 3.—One brick and one concrete overcast and thirty stoppings of brick and concrete have been built.

Salem.—Three overcasts and fifty stoppings all of concrete have been built. One thousand four hundred feet of drain, a portion of which is the tunnel system to secure drainage from a part of this mine, has been completed. Fifty Wolf safety lamps were purchased. The outside improvements consist of 14 dwelling houses. One three hundred and fifty million gallon reservoir is being constructed, which when completed will furnish a supply of water for this and the Huron mines. One American-LaFrance Chemical Fire Engine has been purchased.

Carbon.—A lamp house of brick and concrete has been built.

Huron No. 2.—Forty machine drawn coke ovens have been completed, and 60 more are under construction. One boiler house and one power house of brick, one washer building and coal bin of concrete are being built.

#### H. C. FRICK COKE COMPANY

Baggaley.—Coal cutting equipment, consisting of 15 puncher type mining machines, one 2-stage 1500 cubic foot compressor complete, with pipe lines, etc., was installed.

Toward the end of the year, the installation of a compressed air mine haulage was started, but not entirely completed. The equipment consists of a 4-stage duplex air compressor, the necessary high pressure air lines, two compressed air locomotives,—one 16 tons and the other 10 tons in weight. Mine tracks for this haulage were also completed, with proper weight of rail and road bed.

Dorothy.—Ten permanent stoppings, of fire-proof construction, were built during the year.

#### HOSTETTER-CONNELLSVILLE COKE COMPANY

Whitney.—Installed one 24 x 42 inch haulage engine with 5-foot drum. Six 5-foot cast iron bull wheels. Six Ingersoll-Rand puncher mining machines. Four 150 H. P. Erie City boilers. One 100 H. P. tubular boiler at Nine-Mile run, for pumping water to mine reservoir.

Machine air lines: 2,500 feet of 6-inch pipe, 4,600 feet of 5-inch pipe, 5,700 feet of 3-inch pipe, 3,250 feet of 2-inch pipe and 2,500 feet of 1½ inch; 2,894 feet of 7-inch steam line from boilers to bore hole, 500 feet of 6-inch from bottom of bore hole to haulage engine at 6 face entry left.

Completed inside: One 39 foot x 40 foot engine room with 24 inch x 12 foot stone wall, roof supported by 18 inch steel trusses.

One-half (250 feet) slope haulage side track, roof secured with 55 x 20 foot 18 inch I beams. Three hundred and fifty feet 2 x 3 foot ditch on 11 left face entry. Five permanent overcasts. Twenty-five 9 inch permanent brick stoppings and twenty-five 13 inch permanent brick stoppings.

Leveling local swamp: Two thousand four hundred and forty-five feet of bottom removed and 90,000 lineal feet of roof taken down.

Three water wells of the following depth, 454, 215, and 205 feet each, which supply water for fire protection, watering ovens and general use.

Seven thousand feet 40 lb. iron mine track.

Hostetter.—Installed as follows: One air shaft, 12 feet x 24 feet x 359 feet. One brick engine house 33 feet x 46 feet. One pair 16 inch x 24 inch Lepley hoisting engines. One brick air compressor building 34 feet x 44 feet. Two 17 x 27 x 26 x 16 $\frac{1}{4}$  x 24 inch Ingersoll-Rand air compressors. One air receiver 5 feet x 18 feet.

One hundred and sixty-one feet of 4-inch C. I. pipe line. Eighty feet of 5 inch, 180 of 4 inch, 100 feet of 1 $\frac{1}{2}$  inch, 269 feet of 1 inch wrought pipe line running from bore hole.

One 40 x 100 foot brick boiler house, roofing 3-ply paper. Eight 150 H. P. H. T. Erie City boilers. One Lafayette feed pump 12 x 6 x 18 inches. One 20 x 32 inch steel water tank, capacity 120,000 gallons. Three double dwellings of 6 rooms. One lamp and oil house 12 x 24 feet. Three bore holes 20 inches in diameter by 16 inch castings, 325 feet deep.

One shaft 12 x 24 feet x 358 feet deep. One head frame. One cage. One steel rope. Two bull wheels. One 12 x 12 x 12 Westinghouse air compressor. One well for water storage, capacity 100,000 gallons, 215 feet 8 inches deep. Eight Ingersoll-Rand Sargent mine drilling machines. One pump room, brick arch, 18 feet x 170 feet. One 9 x 170 foot sump. One 12 inch steel steam line from boilers to pumps 560 feet. One 12 inch exhause steel steam line 560 feet running from pump to surface. One 4 inch W. I. water line 600 feet running from tank to houses. One thousand seven hundred feet of 24 inch sewerage line. One thousand feet of 8 inch steel air line from shaft to 12 face entry left.

One 10 x 12 foot frame yard boss shanty. One engine (dinkey) shed 18 feet x 24 feet.

Sixteen 9 inch and twenty-six 12 inch brick stoppings. Six permanent overcasts. One 4 inch x 4 inch 3,000 foot ditch. One sump 9 feet 5 inches x 10 feet x 170 inches. Two sumps from main sump to pumps each 48 feet long by 4 feet 5 inches x 10 inches. Arch in air shaft 13 foot wall by 100 feet long. One 6-inch steel air line 3,400 feet long from shaft to Whitney air line. One 5-inch steel air line 1,000 feet to slope. One 3 inch steel air line 600 feet long to 10 right face entry. One thousand four hundred feet of 3-inch steel air line to 11 left face entry. Two thousand five hundred feet of 1 $\frac{1}{4}$  inch steel air line.

One 20 x 40 x 16 x 48 Jeans compound pump. One 26 x 14 x 28 Yough pump. One 24 x 14 x 48 Lafayette pump. One 26 x 14 x 46 Lafayette pump.

#### ATLANTIC CRUSHED COKE COMPANY

Atlantic No. 3.—A lamp house of tile and concrete has been built and 50 Wolf and 15 Clanny safety lamps provided.

Atlantic No. 4.—A Clifford steel fan 3 $\frac{1}{2}$  x 9 feet was installed, and all stoppings in the mine have been built of concrete.

#### DONOHUE COKE COMPANY

Donohoe.—Fifty Wolf safety lamps were purchased for use in pillar work. Seven overcasts of brick and steel were constructed.

An electric power rail (75 and 80 R. R. Iron) has been laid the entire length of the main airway. This rail is laid on brick piers two feet high, and four feet from the coal, spaced fifteen feet apart with a plate glass insulator between the rail and each pier. The rail is practically safe from injury or disturbance due to roof falls, and from fire due to its position. From this rail at regular distances feeders of 4.0 lead covered cables are connected to the perforated third rail which furnishes power for the haulage motors. The main airway in which the rail is laid is inspected daily and a report of same recorded in the Fire Boss report book; likewise inspection is made daily of all electric connections and reported.

The haulage entries are now being whitewashed their entire length.

The outside improvements consist of a complete water system for fire protection and house service.

#### LATROBE COAL COMPANY

Latrobe No. 1.—A new boiler house was built replacing the one destroyed by fire in February.

#### UNITY COAL COMPANY

Carney.—An additional Erie City 150 H. P. boiler was installed, and an addition built to the present boiler house to accommodate it.

The underground improvements consist of two additional mine pumps.

#### FORT PALMER COAL AND COKE COMPANY

Fort Palmer No. 1.—A new washing plant of the latest jig type has been installed.

#### UNITY-CONNELLSVILLE COKE COMPANY

An air shaft 8 feet x 8 feet x 17 feet has been completed, and a 6½ x 20 foot ventilating fan is being constructed.

#### Prosecutions for Violations of the Mining Laws

November 3rd. William Bostick blasted coal without undermining in the Greensburg No. 2 mine. He plead guilty and was sentenced to pay five dollars fine and costs.

December 8th. Frank Magmaghi blasted coal without properly undermining it; also passed danger signal at the entrance to his place of work in the Greensburg No. 2 mine. He plead guilty and was sentenced to pay ten dollars fine and costs.

May 27th. John Duder took pipe and tobacco into Dorothy mine where locked safety lamps were used. Defendant is a fugitive.

February 1st. Charles Croul and John Kanuff fired a blast in a part of the Donohoe mine in which locked safety lamps were used, without the direction and consent of the Mine Foreman. Kanuff was arrested, plead guilty and was sentenced to pay a fine of twenty dollars and costs. Croul is a fugitive.

## MINE FOREMEN'S EXAMINATIONS

The annual examination of applicants for certificates of qualification as Mine Foremen and Fire Bosses was held in K. G. E. Hall, Greensburg, April 6, 7, 8 and 9.

The Board of Examiners was composed of C. B. Ross, Inspector; John McClane, Superintendent, and David Clark, Mine Foreman.

There were 29 applicants examined for Mine Foremen's certificates and 42 for Fire Bosses' certificates. The following persons having passed a satisfactory examination were granted certificates as Mine Foremen:

## First Grade

James C. Dawson, Greensburg; Stephen Petroskey, Whitney; John McKenna, Hostetter, and John Shanley, Crabtree.

## THIRD DISTRICT

---

ARMSTRONG, BUTLER, BEAVER, CLARION, LAWRENCE AND MERCER COUNTIES

---

Mercer, Pa., March 2, 1910.

Hon. James E. Roderick, Chief of Department of Mines:

Sir: In compliance with the Act of Assembly of May 15, 1893, I herewith transmit my annual report of the Third Bituminous District for the year ending December 31, 1909.

The increase in production over the year 1908 was 130,180 tons. The number of fatal accidents was the same, but there was a reduction of two in the number of non-fatal accidents.

Many of the mines were idle a good deal of the time, especially the smaller mines of the district, during the spring and summer months.

A description of the condition of the mines and the statistics connected with their operation are given in the report.

Respectfully submitted,

THOMAS K. ADAMS,  
Inspector.

## SUMMARY OF STATISTICS

|                                                                       |           |
|-----------------------------------------------------------------------|-----------|
| Number of mines, .....                                                | 87        |
| Number of mines in operation .....                                    | 78        |
| Number of tons of coal shipped to market, .....                       | 3,389,758 |
| Number of tons used at mines for steam and heat, .....                | 125,787   |
| Number of tons sold to local trade and used by employes, .....        | 48,154    |
| Number of tons used in the manufacture of coke, .....                 | 1,553     |

TABLE 4—Fatal Accidents Inside and Outside of Mines

| Date of accident | Name of Person        | Nationality   | Occupation     | Age | Married or single | Number of widows | Number of orphans | Name of Mine           | County         | Nature and Cause of Accident in Brief                                                                                                                                                                                                                                                   |
|------------------|-----------------------|---------------|----------------|-----|-------------------|------------------|-------------------|------------------------|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Feb. 5           | Augustus Swanson,--   | Swedish, --   | Miner          | 29  | S                 | ---              | ---               | Hardscrable, -----     | Clarion,       | Killed by fall of coal in his room. He failed to sprag the coal after he had undetermined a large portion of it.                                                                                                                                                                        |
| April 28         | Alfred McCaulmus,---  | American,---  | Scraper, ----- | 27  | M                 | 1                | 2                 | Cowan, -----           | Armstrong, --  | Killed by fall of roof at face of room while cutting the coal. He neglected to post the roof properly.                                                                                                                                                                                  |
| June 23          | Antio Antiochi, ----- | Italian, ---- | Miner, -----   | 34  | M                 | 1                | 7                 | Hardscrable, -----     | Clarion, ----- | Fatally injured by fall of draw slate in his room. He failed to take it down or prop it. Died August 21.                                                                                                                                                                                |
| Sept. 9          | William Elliot, ----- | Scotch,-----  | Miner, -----   | 21  | S                 | ---              | ---               | Pine Run No. 1,---     | Armstrong, --- | Killed by premature explosion of powder and dynamite in his working place. It is supposed that he became temporarily insane and began tampering with the fuse, a spark from which ignited a can of powder, thus exploding the dynamite.                                                 |
| 21               | James Angelo, -----   | Italian, ---- | Miner, -----   | 46  | M                 | 1                | 1                 | Diamond No. 1,---      | Mercer, -----  | Killed by fall of roof while undercutting pillar coal. He had neglected to prop the roof before beginning work.                                                                                                                                                                         |
| Oct. 9           | Dinnis Connors, ----- | American,---  | Miner, -----   | 58  | M                 | 1                | 2                 | Shenango, -----        | Mercer, -----  | Killed by fall of roof in his room while undercutting the coal. He neglected to prop the roof.                                                                                                                                                                                          |
| Nov. 26          | Wesley Wright, -----  | American,---  | Top-hand, ---  | 15  | S                 | ---              | ---               | Stoneboro No. 7, ----- | Mercer, -----  | Killed by falling down a shaft from the surface landing, a depth of 120 feet. He, with two older men, was moving a car to put it on the cage at the surface landing, when he was pushed into the shaft. The accident was due to the carelessness of the two men who were assisting him. |

TABLE 5—Non-Fatal Accidents Inside and Outside of Mines

## CONDITION OF MINES

## GREAT LAKES COAL COMPANY

Kaylor.—I detected explosive gas in two entries, but they were not being operated at the time of my inspection. A large volume of air was being well distributed through the different sections of the mine. Near the face of the works much water is being produced, hence the drainage is somewhat defective at that point.

Snow Hill.—No explosive gas has been found by the use of the safety lamp during the year. The mine is well ventilated and drained and in good condition generally.

Barnhart.—Reasonably well ventilated, but the drainage was defective at a few points on the haulageways.

Pine Run No. 1.—As a whole, very well ventilated, but in some portions of it the velocity of the air was somewhat weak. The drainage of the mine was reasonably good.

Pine Run Nos. 2 and 3.—Very few persons were employed in No. 2 mine and none at No. 3 during the year. I did not have an opportunity to inspect either of them during latter part of year.

## SHARON COAL AND LIMESTONE COMPANY

Buhl No. 2.—Ventilation was reasonably good, except in one entry, where the velocity of the air current was not strong enough, which was due to too much leakage at doors along the air course. The drainage of the mine was fair except at a few points on the entries.

Buhl No. 3.—A rope system of haulage and a Brazil ventilating fan ten feet in diameter have been installed during the year.

Buhl No. 3.—Ventilation and drainage were very satisfactory.

Buhl No. 4.—Ventilation was very satisfactory, but the drainage needed improvement.

Buhl No. 5.—Very well ventilated. Many parts of the mine were very wet, and by reason of this the drainage at points was defective.

## BUTTS CANNEL COAL COMPANY

Annandale Nos. 1 and 2.—In very satisfactory condition both as to ventilation and drainage.

## WESTERMAN-FILER COMPANY

Diamond Nos. 1 and 3.—Ventilation is in satisfactory volume, but it could be more efficiently distributed to the working faces by a more liberal use of check doors, especially for No. 3 mine. The drainage at some points on the main haulageways needed improvement.

## ACME COAL MINING COMPANY

Acme.—A satisfactory volume of air produced, but through excessive leakage at doors and stoppings much of it failed to reach the inner workings. The defects will be remedied soon.

Avondale.—Ventilation was good. The drainage at one point on the main haulage road was defective, but a ditch was being provided to drain off the water.

## STATE LINE COAL COMPANY

State Line.—This mine, as a whole, was in a very satisfactory condition.

## GROVE COAL COMPANY

Enterprise.—A very satisfactory volume of air was being produced, but it was not well conveyed to the working faces, there being too much leakage of the air currents at doors and stoppings. The main air course, which is also the traveling way, has been enlarged and repaired recently, which will improve the ventilation. The drainage is fair.

## MERCER IRON AND COAL COMPANY

Stoneboro No. 7.—The ventilation and drainage were satisfactory. An electric plant is being installed at this mine and hereafter the haulage will be done by electric motor instead of by mules.

## PITTSBURG PLATE GLASS COMPANY

Mosgrove Nos. 1 and 2.—Fairly well ventilated and drained.

## EAGLE COAL COMPANY

Eagle Nos. 3 and 4.—Reasonably well ventilated and drained.

## PARDOE COAL COMPANY

Pardoe.—A good volume of air was being produced, but owing to so much leakage at stoppings along the air ways, the currents at face of some of the entries were weak. Owing to the mine producing so much water the drainage was somewhat defective.

Kee.—Fairly well ventilated, but the drains not being clean the drainage was not very good.

## KEYSTONE MINING COMPANY

Sterling No. 3.—Was not well ventilated at time of my last inspection, owing to the fan machinery not being connected with the gas line, which prevented the fan from receiving power to run it, but since my inspection the power has been furnished and the fan is now running and I am informed that lots of air is now circulating through the workings.

Sarah Furnace No. 1.—Well ventilated and drained.

## MONTEREY COAL COMPANY

Monterey.—In excellent condition generally.

## WIDNOON COAL MINING COMPANY

Widnoon.—In very fair condition, but I advised that the speed of the fan be increased so as to produce a higher velocity of the air currents at the face of the workings.

## F. A. MIZENER

Grant.—Ventilation where the coal property was being developed was good, but where the pillars were being extracted the drainage was poor. That section of the work, however, will soon be finished.

## ERIE COAL AND COKE COMPANY

Keystone No. 1.—Ventilation very satisfactory, and the drainage reasonably good.

## FOWLER COAL MINING COMPANY

Fowler.—This being an extremely wet mine the drainage was somewhat defective, but the ventilation was fair.

## SAMUEL SHERWIN

Kincaid.—Well ventilated and drained.

## CLARION COAL MINING COMPANY

Clarion.—In a very satisfactory condition generally.

## BRADY'S BEND COAL MINING COMPANY

Hardscrable.—Fairly well ventilated except in two entries where the air current had not sufficient velocity to carry off the smoke as fast as it was being produced when shots were fired. The drainage, except at one point, was in satisfactory condition.

## SHENANGO COAL COMPANY

Shenango.—The velocity of air not strong enough at the face of one of the entries to carry off the smoke. Drainage fair.

## MONARCH COAL COMPANY

Monarch.—In very fair condition generally.

## BEAVER COAL AND COKE COMPANY

Beaver Nos. 1 and 3.—In a very satisfactory condition.

## BESSEMER AND LAKE ERIE COAL MINING COMPANY

Jefferson.—Ventilation and drainage reasonably good.

## ROCHESTER AND PITTSBURG COAL AND IRON COMPANY

Cowan.—Well ventilated and the drainage satisfactory, except at a few points on the haulage ways.

## LOCHRIE BROTHERS COAL COMPANY

Pennsylvania No. 1.—In very satisfactory condition.

## CHESTNUT RIDGE COAL MINING COMPANY

Chestnut Ridge.—A ventilating fan of the Brazil type, twelve feet in diameter, was provided during the year, and the ventilation was much improved. The drainage of the mine was good.

## CUNNINGHAM COAL COMPANY

Chicora.—Ventilation of the mine was not very satisfactory as the velocity of the air current was not sufficient to carry off the smoke, but this will be remedied in a short time as another opening is being provided near the face of the workings to serve the purpose of an inlet.

## CANN COAL COMPANY

Carver.—The ventilation was reasonably good. Owing to the mine being extremely wet, the drainage was not very good.

## KITTANNING PLATE GLASS COMPANY

Kittanning Plate Glass.—In excellent condition both in regard to ventilation and drainage.

## FRANCIS AND PROSSER COAL COMPANY

Sterling.—Taking into consideration that the coal acreage at this mine only consists of blocks of coal which were left in an old abandoned works, thereby causing the workings now to be very irregular, it was in a very fair condition, except in one entry where the ventilation was not very good, but that part of the entry was to be abandoned.

## PENNSYLVANIA FUEL COMPANY

Cribbs.—Ventilation was good, but the drainage was only fair.

## P. D. SHERWIN

Enterprise.—Was in reasonably good condition.

Sherwin.—Ventilation was fair, but the drainage was somewhat defective.

## JACKSON MINING COMPANY

Jackson.—Fairly well ventilated, but the drainage was defective, owing to the mine being an extremely wet one.

## PENN MINING COMPANY

Penn.—In a very satisfactory condition.

## PRESTON COAL COMPANY

Preston.—In a satisfactory condition.

## MUTUAL COAL MINING COMPANY

Royle.—In a satisfactory condition.

## GLENORA COAL MINING COMPANY

Goss.—In fair condition, except on entry where the ventilation was too far from the face of it, but I ordered this defect to be remedied forthwith.

## NELLIE COAL COMPANY

Nellie.—Ventilation and drainage were reasonably good.

## STANDARD COAL MINING COMPANY

Standard.—Ventilation, except in one entry, was fair. The drainage was good.

## CHERRY RUN COAL COMPANY

Cherry Run.—Ventilation and drainage were fair.

## W. L. SCOTT COAL COMPANY

Branchton.—A seven-foot diameter fan, built by the E. M. Link Machinery Company, has been installed at this mine during the year. It is producing a fair volume of air, and if it is properly distributed to the face of the workings, the mine will be fairly well ventilated. The drainage of the mine at a few points needed improvement.

## DIAMOND COAL MINING COMPANY

Diamond.—Owing to a squeeze overrunning the principal part of the workings of this mine, it was not in very good condition.

## THOMPSON RUN COAL COMPANY

Thompson Run.—Only a few persons were employed in this mine at the time of my last inspection. The general conditions were not very good.

## NORTH PITTSBURG REALTY COMPANY

Harmony Junction.—At this new mine the ventilation was not of sufficient volume, and I ordered improvements to be made at once.

## HILLVILLE COAL COMPANY

Hillville.—In excellent condition generally.

## OAKES BROTHERS

Oakes.—In a very satisfactory condition.

## BERGER-AIKEN COAL COMPANY

Bethel.—Ventilation was not satisfactory, and I ordered improvements to be made at once. The present operating company had just purchased the mine, which was probably the cause for the ventilation not being better than it was.

## J. B. MILLER

Mineral Run.—Not in operation during any of my visits, hence it was not examined during the year.

## GEORGE G. STAGE AND SON

Stage.—Only worked a few days in the months of January and February, and has not been in operation since, and was not examined by me during the year.

## MAXLER-ROGER COAL AND LIMESTONE COMPANY

Pine Grove.—Only began operations in December and was not examined by me during the year.

## RIMERTON COAL COMPANY

Rimerton.—Only began operations in December and was not examined by me during the year.

## TURNER COAL COMPANY

Evans City Shaft.—In only fair condition.

## MAINES COAL COMPANY

Maines.—When last inspected only nine persons were employed and the operator claimed exemption from operating under the requirements of the mining law. The mine was not in very satisfactory condition as far as the ventilation was concerned.

## A. DAVIDSON

Davidson.—In a very satisfactory condition.

## W. F. CLAYTON

Clayton.—In a very satisfactory condition.

## JAMISONVILLE COAL AND COKE COMPANY

Jamisonville.—In a very satisfactory condition.

## KEYSTONE COLLIERIES, INCORPORATED

Jocelyn.—A good volume of air produced, but the stoppings for conveying the air to the face of the workings being in poor condition the velocity of the air of one of the main currents was so reduced as to make the ventilation at the face of that portion of the workings inefficient.

## WITCH HAZEL COAL COMPANY

Chewton.—In very good condition.

## KENSINGTON COAL AND IRON COMPANY

Melrose.—In a satisfactory condition.

## Mine Foremen's Examinations

The annual examination of applicants for certificates of qualification as Mine Foremen and Fire Bosses was held in the Academy Building, Mercer, April 6, 7, 8 and 9. The Board of Examiners was composed of Thomas K. Adams, Inspector; Edward Buckham, Superintendent, and George Young, Mine Foreman. There were 29 applicants examined for mine foremen's certificates and 10 for fire bosses' certificates. The following persons passed a satisfactory examination and were granted certificates:

## Mine Foremen

## First Grade

George H. Deike

## Second Grade

Lee R. Nicholas and Charles B. Henry

## Fire Bosses

George H. Deike and John A. Murray.

## ***FOURTH DISTRICT***

---

CLEARFIELD, JEFFERSON, ELK, ARMSTRONG, CLARION, CLINTON,  
CAMERON AND McKEAN COUNTIES

---

DuBois, Pa., February 15, 1910.

Hon. James E. Roderick, Chief of Department of Mines:

Sir: In compliance with the requirements of the Bituminous Mine Law, I herewith transmit my annual report of the Fourth Bituminous District, for the year ending December 31, 1909.

There was an increase in production of 958,484 net tons over 1908 from the mines of the larger companies. Many of the smaller operations were idle during the entire year, while others worked little more than half time.

The usual statistical and descriptive matter is given in the body of the report.

Respectfully submitted,

ELIAS PHILLIPS,  
Inspector.

## SUMMARY OF STATISTICS

|                                                                   |           |
|-------------------------------------------------------------------|-----------|
| Number of mines, .....                                            | 78        |
| Number of mines in operation, .....                               | 64        |
| Number of tons of coal shipped to market, .....                   | 5,566,408 |
| Number of tons used at mines for steam and heat, .....            | 191,833   |
| Number of tons sold to local trade and used by employes, .....    | 28,395    |
| Number of tons used in the manufacture of coke, .....             | 550,476   |
| Number of tons of coal produced, .....                            | 6,337,112 |
| Number of tons of coke produced, .....                            | 329,573   |
| Number of coke ovens, .....                                       | 933       |
| Number of coke ovens in operation, .....                          | 933       |
| Number of tons of coal produced by pick mining, .....             | 2,943,777 |
| Number of tons produced by compressed air machines, .....         | 3,126,559 |
| Number of tons produced by electrical machines, .....             | 266,776   |
| Number of persons employed inside of mines, .....                 | 7,871     |
| Number of persons employed outside, including coke workers, ..... | 1,424     |
| Number of persons employed at manufacture of coke, ....           | 235       |
| Number of fatal accidents inside of mines, .....                  | 14        |
| Number of fatal accidents outside, .....                          | 2         |
| Number of non-fatal accidents inside of mines, .....              | 47        |
| Number of non-fatal accidents outside, .....                      | 7         |
| Number of tons of coal produced per fatal accident inside, .....  | 452,651   |
| Number of persons employed per fatal accident inside, ....        | 562       |
| Number of persons employed per fatal accident outside, .....      | 712       |
| Number of persons employed per non-fatal accident inside, .....   | 167       |
| Number of persons employed per non-fatal accident outside, .....  | 203       |
| Number of wives made widows, .....                                | 10        |
| Number of children made orphans, .....                            | 28        |
| Number of steam locomotives used inside of mines, .....           |           |
| Number of steam locomotives used outside, .....                   | 16        |
| Number of compressed air locomotives used inside, .....           |           |
| Number of compressed air locomotives used outside, .....          |           |
| Number of electric motors used inside, .....                      | 80        |
| Number of electric motors used outside, .....                     | 2         |
| Number of fans in use, .....                                      | 43        |
| Number of furnaces in use, .....                                  | 30        |
| Number of gaseous mines in operation, .....                       | 5         |
| Number of non-gaseous mines in operation, .....                   | 59        |
| Number of new mines opened, .....                                 | 9         |
| Number of old mines abandoned, .....                              | 2         |

## TABLE A

## PRODUCTION OF COAL

| Names of Operators                                    | Tons      |
|-------------------------------------------------------|-----------|
| Northwestern Mining and Exchange Company, .....       | 1,370,328 |
| Shawmut Mining Company, .....                         | 854,761   |
| Jefferson and Clearfield Coal and Iron Company, ..... | 768,881   |
| Buffalo and Susquehanna Coal Mining Company, .....    | 608,466   |
| Rochester and Pittsburg Coal and Iron Company, .....  | 519,183   |
| Cascade Coal and Coke Company, .....                  | 367,852   |
| Kettle Creek Coal Mining Company, .....               | 258,882   |
| Jefferson Coal Company, .....                         | 226,668   |
| Fairmount Coal Company, .....                         | 183,088   |
| Allegheny River Mining Company, .....                 | 167,645   |
| Falls Creek Coal Company, .....                       | 123,644   |
| Rembrandt Peale, .....                                | 113,306   |
| Oak Ridge Mining Company, .....                       | 112,758   |
| Panther Run Coal Company, .....                       | 94,952    |
| Mahoning Coal Company, .....                          | 93,062    |
| Clearfield Colliery Company, .....                    | 69,083    |

TABLE 4—Fatal Accidents Inside and Outside of Mines

| Date of accident | Name of Person          | Nationality     | (Occupation     | Age | Married or single | Number of widows | Number of orphans | Name of Mine         | County            | Nature and Cause of Accident in Brief                                                                                                                                                                                                                                                               |
|------------------|-------------------------|-----------------|-----------------|-----|-------------------|------------------|-------------------|----------------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Jan. 6           | Simon Mitchell, -----   | Lithuanian, --- | Loader, -----   | 32  | S.                | -----            | -----             | DuBois No. 1, -----  | Clearfield, ----- | Instantly killed. Was electrocuted by coming in contact with a trolley wire carrying 500 volts. The accident occurred in the mine while the victim was trying to get into an empty trip of cars at an unusual point on the side track. His neck came in contact while he had his hands on the cars. |
| Feb. 20          | Sigfried Johnson, ----- | Swedish, ---    | Miner, -----    | 31  | M.                | 1                | 1                 | Eureka Slope, -----  | Elk, -----        | Instantly killed by fall of roof in an entry at night. After firing two shots in the coal he returned to make an examination, when the roof fell. The roof was of a dangerous character.                                                                                                            |
| 23               | George Tolasky, -----   | Lithuanian, --- | Timberman, -    | 42  | M.                | 1                | 4                 | DuBois No. 1, -----  | Clearfield, ----- | Fatally injured by fall of roof while timbering on a side track on one of the side entries. The roof was of a dangerous nature and while placing one of the timbers a section of it fell.                                                                                                           |
| March 23         | Joseph Petrock, -----   | Italian, ---    | Miner, -----    | 44  | M.                | 1                | 1                 | Soldier No. 3, ----- | Jefferson, -----  | Instantly killed by fall of slate while working in an entry that was being driven along the side of a rock fault. Did not use sufficient timber for safety under the conditions.                                                                                                                    |
| 31               | James Alsbaugh, -----   | American, ---   | Car loader, --- | 21  | S.                | -----            | -----             | Erlton, -----        | Clearfield, ----- | Fatally injured by being crushed between railroad cars. He was dropping three loaded cars by gravity below the scale house and, in attempting to make a coupling, he miscalculated the time and distance and was caught between the bumpers. Outside.                                               |
| April 2          | Joseph Angelo, -----    | Italian, ---    | Loader, -----   | 38  | M.                | 1                | 3                 | Trout Run No. 1, --- | Jefferson, -----  | Fatally injured by fall of roof in his working place while repairing the track.                                                                                                                                                                                                                     |

|          |                         |               |                 |    |          |                       |                   |                                                                                                                                                                                                                                                                                                                |
|----------|-------------------------|---------------|-----------------|----|----------|-----------------------|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| April 13 | Lawrence Lucore, -----  | American,---  | Laborel, ----   | 19 | S. ----- | West Clarion No. 8,   | Jefferson, -----  | Fatally injured by being struck on the head by the handle of a windlass that had been used to hoist the material out of the air shaft. The few men at work in the mine were being hoisted by the windlass when the accident occurred. Lucore walked home and his injury was not considered dangerous. Outside. |
| 19       | Charles Forrest, -----  | Scotch,-----  | Driver, -----   | 32 | M. 1     | 4 DuBois No. 2, ----  | Clearfield, ----- | Fatally injured by fall of roof while bringing a loaded car out of a room. The car caught one of the props knocking it out, allowing the roof to fall, a part of which caught Forrest, who was walking at the rear end of the car. Fatally injured by fall of roof in his working place.                       |
| May 8    | Herman Ostland, -----   | Swedish, ---  | Miner, -----    | 41 | M. 1     | 1 Shawmut No. 3, --   | Elk, -----        | Fatally injured by fall of coal while working on pillars with a punching machine. He was undermining a stump of coal and, leaving no support, it fell on him. He had been ordered to mine the stump out by hand, but disobeyed orders.                                                                         |
| 11       | Joseph Carnduff, -----  | Scotch,-----  | Miner, -----    | 33 | S. ----- | Bloomington No. 9,    | Jefferson, -----  | Fatally crushed by mine cars in the mine. While sitting in front of a car, waiting for the trip to pass, the car started and he was caught between the car and pillar.                                                                                                                                         |
| June 5   | George Vochinski, ----- | Polish, ----  | Miner, -----    | 43 | M. 1     | 1 Tyler No. 8, -----  | Clearfield, ----- | Fatally injured by a fall of roof. He was mining out a stump of coal in an abandoned place when the roof fell, striking him on the head.                                                                                                                                                                       |
| 28       | Joseph Cornelius, ----- | Austrian, --  | Miner, -----    | 45 | S. ----- | Fairmount No. 4,      | Armstrong, ---    | Fatally injured by fall of roof while undercutting his room with a compressed air punching machine. The roof was dangerous.                                                                                                                                                                                    |
| July 24  | Angelo Regeno, -----    | Italian, ---- | Machine runner, | 39 | M. 1     | 4 Soldier No. 3, ---- | Jefferson, -----  | Instantly killed by fall of roof while drawing out a room pillar. He fired a blast in the coal and was loading a car, when the roof fell from a dangerous slip, catching his head and shoulders over the car.                                                                                                  |
| Sept. 17 | George Reed, -----      | American,---  | Miner, -----    | 33 | M. 1     | 3 Oak Ridge No. 6,--- | Armstrong, ---    | Instantly killed by fall of coal while undermining a coal stump that had been left for the purpose of supporting the roof in an abandoned place.                                                                                                                                                               |
| Nov. 30  | Rocco Clemento, -----   | Italian, ---- | Miner, -----    | 35 | M. 1     | 6 West Clarion No. 1, | Jefferson, -----  |                                                                                                                                                                                                                                                                                                                |

TABLE 4.—Continued

| Date of accident | Name of Person        | Nationality  | Occupation      | Age | Married or single | Number of widows | Number of orphans | Name of Mine      | County     | Nature and Cause of Accident in Brief                                                                                                                                                                                    |

## CONDITION OF MINES

## NORTHWESTERN MINING AND EXCHANGE COMPANY

Eriton.—In good condition as to ventilation and drainage. Marsh gas was being produced in one section of the mine, and safety lamps were requested to be used in that section. The mine has been operated steadily day and night during the year, employing a large number of persons and producing nearly one-half the total tonnage of this company.

Dagus No. 1.—In good condition as to ventilation and drainage.

Dagus No. 3.—In very good condition.

Eureka Slope.—In fair condition as to ventilation. The drainage needed some improvement.

West Clarion No. 1.—In fair condition as to ventilation and drainage.

West Clarion No. 6.—Ventilation in fair volume; drainage very good.

West Clarion No. 8.—A new mine. In fair condition.

Clarion No. 27.—In fair condition as to ventilation; drainage defective.

## SHAWMUT MINING COMPANY

Shawmut No. 3.—In fair condition.

Shawmut No. 5.—In good condition.

Shawmut Nos. 6 and 10.—Idle during the entire year.

Byrne No. 21.—One section of the mine was insufficiently ventilated, but other parts were satisfactory. The drainage was good.

Cardiff No. 41.—In fair condition. The ventilation and drainage needed some improvement.

Brown's Run No. 42.—In fair condition as to ventilation and drainage.

Ramsay No. 1.—In good condition, except in the No. 2 section, where the ventilation needed attention.

## JEFFERSON AND CLEARFIELD COAL AND IRON COMPANY

Soldier Nos. 1 and 2.—In good condition as to ventilation and drainage. Mining is done entirely from pillars.

Soldier No. 3.—In fair condition as to ventilation and drainage.

Soldier No. 4.—In fair condition. Mining is done entirely from pillars.

Soldier No. 5.—This mine is ventilated by strong and vigorous currents of air. The drainage at points was not very good. Two sections of the mine produce marsh gas, and in those sections safety lamps are used.

Trout Run No. 1.—In very fair condition on each examination.

Maplewood.—Idle almost the entire year. In good condition when last inspected.

## BUFFALO AND SUSQUEHANNA COAL MINING COMPANY

DuBois No. 1.—In good condition on each inspection. Safety lamps continue to be used beyond the fire boss stations. Although there is no marsh gas, these lamps are a safeguard and the mine atmosphere is more healthful than if open lights were used.

DuBois No. 2.—Well ventilated and in healthful condition.

## ROCHESTER AND PITTSBURG COAL AND IRON COMPANY

Helvetia Slope and Stanley Shaft.—In good condition.

## CASCADE COAL AND COKE COMPANY

Tyler Nos. 7 and 8.—In good condition.

## KETTLE CREEK COAL MINING COMPANY

Kettle Creek Nos. 2 and 5.—In good condition.

## JEFFERSON COAL COMPANY

Coal Glen Nos. 1 and 2.—In very fair condition.

## FAIRMOUNT COAL COMPANY

Fairmount Nos. 3 and 4.—The ventilation has not been in satisfactory condition, but some improvement was found in it during the latter part of the year. The drainage was good.

Fairmount No. 5.—This mine has not been operated very much during the year. It has not been in satisfactory condition as to ventilation, and some action was about to be taken to have the law complied with when the mine was closed down. A fan is being built for this mine and I understand will be erected soon.

Fairmount No. 6.—A new drift mine into the lower Freeport seam. It is ventilated by a furnace and was found in good condition as to health and safety.

Bostonia.—Cannel coal is being mined from this mine, and but few persons are employed. In very fair condition.

## ALLEGHENY RIVER MINING COMPANY

Conifer Nos. 1, 2 and 3.—In good condition as to health and safety.

## REMBRANDT PEALE

Bloomington No. 9.—In very fair condition. It will soon be worked out. The main entry pillars are being removed.

## FALLS CREEK COAL COMPANY

Hopkins.—In good condition as to ventilation and drainage.

## OAK RIDGE MINING COMPANY

Oak Ridge Nos. 2, 6, 7 and 8.—The No. 2 mine was worked out and abandoned. No. 6 mine has been kept in good condition. The Nos.

7 and 8 are new openings. The Lower Freeport seam is being mined in the No. 7, and the B or Lower Kittanning in the No. 8 mine. The No. 7 mine is in good condition, but the No. 8 is in only fair condition.

#### PANTHER RUN COAL COMPANY

Panther Run.—In good condition.

#### MAHONING COAL COMPANY

Mahoning.—In good condition as to health and safety.

#### CLEARFIELD COLLIERY COMPANY

Bloom No. 1.—In good condition.

Caldwell No. 2.—A new drift mine into the D or Lower Freeport seam of coal. It is ventilated by a fan and is in good condition.

#### DENTS RUN MINING COMPANY

Dents Run No. 1.—In good condition as to health and safety.

Dents Run No. 2.—Not in operation during the year.

#### WILSON COAL AND COKE COMPANY

Elss.—In fair condition as to ventilation; drainage very defective.

#### M. BURNS

Penn No. 3.—In fair condition. One section of the mine has been worked out.

Coaldale No. 10.—In very fair condition. Only a few persons are employed.

#### PENFIELD COAL COMPANY

Penfield.—In good condition as to health and safety.

#### PILKINGTON AND ELLERY

(Formerly Coaldale Mining Company)

Coaldale No. 11.—Worked out and abandoned by former company.

Coaldale No. 14.—Opened during the year. It is being operated by the present owners. It is in good condition for a new mine.

#### SAMUEL WALLWORK

Carrier.—In good condition as to health and safety.

#### BALDAUF COAL AND COKE COMPANY

Baldauf No. 1.—Idle the entire year.

Baldauf No. 2.—In very fair condition as to ventilation and drainage.

#### HARBISON-WALKER REFRACTORIES COMPANY

Plane.—In very fair condition. The ventilation and drainage need improvement in one section of the mine.

## F. A. LANE

Lane.—In good condition.

## PENFIELD COLLIERY COMPANY

Coalville.—In very fair condition.

## CAMP RUN MINING COMPANY

Camp Run.—In fair condition.

## STEWART COAL COMPANY

Stewart No. 1.—A new drift mine where the B or Lower Kittanning seam is being mined. No artificial means was being used to ventilate the mine and no second means of egress was provided, all of which has been requested.

## VERSTINE-HIBBARD AND COMPANY

Anderson Run.—In very fair condition as to ventilation and drainage.

## TOBY COAL MINING COMPANY

Black Diamond.—In good condition. Idle the greater part of the year.

## AVOINE COAL AND COKE COMPANY

Avoine.—In good condition. Only a few persons have been employed.

## OWENS MINING COMPANY

Owens.—In fair condition.

## PARADISE COAL MINING COMPANY

Paradise No. 1.—This is a new drift mine into the D or Lower Freeport seam. The workings were in very fair condition.

## ISAAC STAGE

Clearfield No. 10.—In very fair condition. Idle the greater part of the year.

## HALL AND KAUL

King.—A new drift mine into the D or Lower Freeport seam. In very fair condition.

## COBOUGH COLLIERY COMPANY

Cobough Nos. 1, 2 and 3.—Not in operation during the year.

## CLEARFIELD STEEL AND IRON COMPANY

Steel Plant Mine.—Idle the entire year.

## REDBANK MINING COMPANY

Redbank.—Idle the entire year.

## EMPORIUM IRON COMPANY

Mt. Hope.—Idle the entire year.

## CLERMONT SEWER PIPE COMPANY

Lyman.—Idle the entire year.

## BENSCHREEK COAL AND COKE COMPANY

Carbon No. 1.—Idle the entire year.

## RUNAWAY RUN COAL COMPANY

Runaway Run.—Operated but very little during the year. Did not come under the provisions of the law.

## McKNIGHT COAL COMPANY

McKnight.—Idle the entire year.

## IMPROVEMENTS

## SHAWMUT MINING COMPANY

In the Cardiff No. 41 and Byrne No. 21 mines, 12 concrete stoppings were built to displace those built of wood used in conducting the air currents to the working faces.

## JEFFERSON AND CLEARFIELD COAL AND IRON COMPANY

The tippie and derrick over Soldier No. 5 (Sykes Shaft) mine were practically rebuilt.

## BUFFALO AND SUSQUEHANNA COAL MINING COMPANY

In the DuBois No. 1 shaft, four new concrete stoppings were built to displace those built of wood, also two masonry overcasts. In the DuBois No. 2 mine a new pump room was made and arched with brick, and additional pumps were placed to increase the capacity for drainage. The shaft bottom was also being re-timbered, using steel I beams for cross bars.

## ROCHESTER AND PITTSBURG COAL AND IRON COMPANY

Electrically driven pumps have been installed to displace the steam pumps used formerly in delivering the mine water to the surface. This change in power is a decided improvement, as it dispenses with the steam pipes that created much heat in the mine.

## JEFFERSON COAL COMPANY

An air shaft, 8 x 8 feet and 30 feet deep, was sunk from the surface into the No. 2 mine workings, where a furnace was built. In the No. 1 mine a new opening was made to the surface for ventilation and an escape way from the inner workings.

## PANTHER RUN COAL COMPANY

A shaft 10 x 10 feet and about 60 feet deep was sunk from the surface into the main body of the mine, to serve as a means of egress from the workings and for ventilation. The entire power plant has been equipped with new boilers, and a new Ingersoll Air Compressor to furnish power to the coal cutting machines and pumps.

## Mine Foremen's Examinations

The annual examination of applicants for certificates of qualification as Mine Foremen and Fire Bosses was held in the Sparks Hall, DuBois, April 6, 7, 8 and 9.

The Board of Examiners was composed of Elias Phillips, Mine Inspector; George L. Miller, General Manager; and John Aikman, Mine Foreman. There were 44 applicants examined for mine foremen's certificates. The following named persons passed a satisfactory examination and were granted certificates as Mine Foremen:

## First Grade

William Millburn, William Donaldson, DuBois; Henry Crawford, Sykesville; Isaac J. Harvey, Helvetia.

## Second Grade

William G. Adam, Robert G. Dowie, Dagus Mines; George Roberts, Jr., Rathmel; William P. Harris, Brockwayville; H. K. Hiles, Fairmount City; M. H. Woodel, Grampian; Frederick Wilkinson, Woodland; William Penman, Coal Glen; James M. Henry, Fairmount City.

## ***FIFTH DISTRICT***

---

FAYETTE COUNTY

---

Uniontown, Pa., February 23, 1910.

Hon. James E. Roderick, Chief of Department of Mines:

Sir: I have the honor to transmit herewith my annual report of the Fifth Bituminous District for the year ending December 31, 1909, as required by the Act of Assembly of May 15, 1893.

Much time was lost during the year by some of the mines in this district owing to poor trade and the scarcity of labor.

Respectfully submitted,

I. G. ROBY,  
Inspector.

## SUMMARY OF STATISTICS

|                                                                       |           |
|-----------------------------------------------------------------------|-----------|
| Number of mines, .....                                                | 60        |
| Number of mines in operation, .....                                   | 60        |
| Number of tons of coal shipped to market, .....                       | 256,921   |
| Number of tons used at mines for steam and heat, .....                | 86,086    |
| Number of tons sold to local trade and used by employes, ..           | 55,400    |
| Number of tons used in the manufacture of coke, .....                 | 6,817,621 |
| Number of tons of coal produced, .....                                | 7,216,028 |
| Number of tons of coke produced, .....                                | 4,656,556 |
| Number of coke ovens, .....                                           | 9,038     |
| Number of coke ovens in operation, .....                              | 9,038     |
| Number of tons of coal produced by pick mining, .....                 | 6,903,106 |
| Number of tons produced by compressed air machines, ..                | 160,043   |
| Number of tons produced by electrical machines, .....                 | 152,879   |
| Number of persons employed inside of mines, .....                     | 5,359     |
| Number of persons employed outside, including coke<br>workers .....   | 3,245     |
| Number of persons employed at manufacture of coke, ....               | 2,078     |
| Number of fatal accidents inside of mines, .....                      | 17        |
| Number of fatal accidents outside, .....                              | 3         |
| Number of non-fatal accidents inside of mines, .....                  | 21        |
| Number of non-fatal accidents outside, .....                          | 3         |
| Number of tons of coal produced per fatal accident in-<br>side, ..... | 424,472   |
| Number of persons employed per fatal accident inside, ..              | 315       |
| Number of persons employed per fatal accident outside, ..             | 1,082     |
| Number of persons employed per non-fatal accident inside,             | 255       |
| Number of persons employed per non-fatal accident out-<br>side, ..... | 1,082     |
| Number of wives made widows, .....                                    | 13        |
| Number of children made orphans, .....                                | 30        |
| Number of steam locomotives used inside of mines, .....               | —         |
| Number of steam locomotives used outside, .....                       | 10        |
| Number of compressed air locomotives used inside, .....               | 8         |
| Number of compressed air locomotives used outside, ....               | —         |
| Number of electric motors used inside, .....                          | 31        |
| Number of electric motors used outside, .....                         | 2         |
| Number of fans in use, .....                                          | 39        |
| Number of furnaces in use, .....                                      | 7         |
| Number of gaseous mines in operation, .....                           | 20        |
| Number of non-gaseous mines in operation, .....                       | 40        |
| Number of new mines opened, .....                                     | 3         |
| Number of old mines abandoned, .....                                  | 1         |

## TABLE A

## PRODUCTION OF COAL

| Names of Operators                         | Tons      |
|--------------------------------------------|-----------|
| H. C. Frick Coke Company, .....            | 4,502,707 |
| Oliver and Snyder Steel Company, .....     | 723,038   |

## THE EXPLOSION AT REVERE MINE

On the morning of July 19, about 5.45, an explosion of fire-damp occurred at the Revere mine of W. J. Rainey, by which three of the workmen were very painfully burned and one fatally burned. The explosion was the result of the flame of an open light coming in contact with a body of gas that had accumulated on a rib fall in No. 8 entry, left of the main slope.

Open lights were in use at the time, except in the development work in the dip section, where safety lamps were used. The removal of pillars had just been begun on No. 8 flat heading, and several falls had been made, which had broken up about twenty or thirty feet. As this was the last section examined by the fire boss before making his report, it is evident, in view of the fact that such a short time elapsed between his examination and the explosion, that the examination was not thorough.

The accumulation of gas was the result of the ventilation having been neglected in this section. Safety lamps were installed exclusively the following morning.

## CONDITION OF MINES

## H. C. FRICK COKE COMPANY

Continental Nos. 1, 2 and 3, Collier, Crossland, Footedale, Kyle, Leckrone Nos. 1, 2 and 3, Leith, Oliphant, Redstone, Shoaf, Smiley, Wynn and Yorkrun, all operated practically full time; but a part of their ovens were idle, owing to the depressed condition of trade, until mid-summer, when the demand grew stronger. The increased demand for labor could not at first be met, thereby preventing the operation of ovens to some extent until the latter part of the year.

The drainage, ventilation and general condition of these mines were good with a few exceptions as to ventilation; but the defects were at once remedied when attention was called to them.

All of the above mines are naturally damp, excepting Collier, which in one section of the air-current was becoming dry on my last visit. This matter was taken up with the Superintendent and Mine Foreman, who promised to give it immediate attention by removing the dust as far as practicable and watering the dry section with a water car made for that purpose.

Continental Nos. 1, 2 and 3, Collier, Crossland, Hopwood, Leith, Oliphant, Redstone, Wynn and the dip portion of Footedale, use safety lamps exclusively, except Oliphant and Wynn, where open lights are used on main haulage fords; and all of the mines, with the exception of Continental No. 1 and Leith, which do all their mining by pick, have employed shot-firers to do the shooting when the men are out of the mine, and only the permissible explosives are used.

## OLIVER AND SNYDER STEEL COMPANY

Oliver Nos. 1 and 2.—Ventilation, drainage and general condition good. These mines are naturally damp, and the most rigid discipline is enforced. No expense is spared to make them safe. Shot-firers are

employed to do the blasting when the men are all out of the mines, except those engaged in this work, and only the permissible explosives are used.

In each rib section a Rib-boss is employed, his duty being to instruct the workmen in setting timber and making falls.

#### W. J. RAINEY

Revere.—Drainage and general condition good. The ventilation on the left of the slope and in a part of the dip workings was not satisfactory on one of my visits. The matter was taken up and received prompt attention by the officials. A portion of the right side of the slope was becoming dusty; but a water wagon for sprinkling has been installed.

Safety lamps have been installed exclusively. The blasting is done with one of the permissible explosives when the workmen are out of the mine.

#### BESSEMER COKE COMPANY

Griffin No. 1.—On my last visit I found that the ventilation had been neglected in parts of the mine. On the right side and at the face of the main workings the air was not being carried up well to the working faces, while on the left side of the main entrance it was escaping through surface breaks before reaching all the working faces. On the right side of the main entrance a section was becoming dry and dusty. The discipline was not up to the standard. I took the matter up with the officials at once and everything has been satisfactorily adjusted. The dust is loaded and sent out and a water wagon installed for sprinkling. Safety lamps are used except on main haulage roads. Shot-firers are employed to do the blasting after the men are out of the mine, and two fans are operated continuously for the ventilation.

Griffin No. 2.—Ventilation, drainage and general condition good.

#### FAYETTE COKE COMPANY

Shamrock.—Ventilation, drainage and other conditions good.

#### PURITAN COKE COMPANY

Parshall No. 2.—General condition, drainage and ventilation good. This mine is damp and worked exclusively with safety lamps. The blasting is done at night when the men are all out of the mine, and permissible explosives are used.

#### S. L. SMITH AND COMPANY

Evans.—Drainage and other conditions good, except ventilation, which was not being carried up well to working faces. Attention was called to this matter and it was promptly adjusted. The mine is very wet and all the mining is done by pick. Safety lamps are used exclusively.

#### WILARTON STEEL COMPANY

Bourne.—In fair condition.

## STEWART IRON COMPANY, LIMITED

Stewart.—Ventilation, drainage and other conditions good. This is a safety-lamp mine and the blasting is done with permissible explosives, when the workmen are out of the mine.

## SUNSHINE COAL AND COKE COMPANY

Francis.—In fair condition.

Hill Top.—In good condition.

## H. R. SACKETT COKE COMPANY

Crystal.—In very good condition.

## JAMES H. HOOVER

Hoover.—Ventilation, drainage and general conditions good. This is a damp mine, and the blasting is done with permissible explosives, when the workmen are out of the mine.

## SOUTH FAYETTE COKE COMPANY

Fretts.—In good condition. Permissible explosives are used and their blasting is done at night.

Emory.—In satisfactory condition.

Coffman.—In fair condition.

## RICH HILL COKE COMPANY

Rich Hill.—Ventilation, drainage and other conditions good. This is a damp mine and the blasting is done with permissible explosives, when the workmen are out of the mine.

## PENN COKE COMPANY

Acme.—In satisfactory condition.

Penn No. 2.—In good condition.

## WHYEL COKE COMPANY

Thomas.—In satisfactory condition.

## REPUBLIC IRON AND STEEL COMPANY

Atcheson.—In fair condition.

## GILMORE COKE COMPANY

Gilmore.—Drainage and general condition good. On my last visit the ventilation was not up to the requirements, but a new six-foot fan was put into operation the following week, and the air measurements, which were taken at the working faces and sent me are entirely satisfactory. This is a damp mine and the blasting is done with permissible explosives, when the workmen are out of the mine.

## W. J. PARSHALL

Old Home.—Ventilation, drainage and other conditions good. This is a damp mine, worked exclusively with locked safety lamps, and the blasting is done with permissible explosives, when the workmen are out of the mine.

## JOHN R. CAROTHERS

Coffman.—In fair condition.

Rider.—In satisfactory condition.

## PLUMER COKE COMPANY

Plumer.—Drainage and general condition good. Ventilation was not satisfactory on my last visit.

## IRON CITY COAL AND COKE COMPANY

Dorothea.—In fair condition.

## HOPE COKE COMPANY

Hope.—This is a new mine, the construction of which is not complete.

## WILLIAM BARTON

Nellie.—In fair condition.

Weaver.—In fair condition.

## CHEAT HAVEN COAL AND COKE COMPANY

Eagle.—In satisfactory condition.

## SMITHFIELD COAL AND COKE COMPANY

Burchinal.—In fair condition.

## SAPPER COKE COMPANY

Sapper.—In good condition.

## JAMES BYRNE AND COMPANY

Finley.—In satisfactory condition.

## SOUTHERN CONNELLSVILLE COKE COMPANY

Marion.—This is a new mine and is in fair condition.

## JOHN A. WHYEL AND SON

Snyder.—In fair condition.

## SUPERBA COAL COMPANY

Superba.—In fair condition. This is a new mine.

## NEWCOMER COKE COMPANY

Newcomer.—In good condition.

## BAXTER RIDGE COKE COMPANY

Baxter.—In fair condition.

## ADA COKE COMPANY

Ada.—In fair condition.

## IMPROVEMENTS

## H. C. FRICK COKE COMPANY

The general management of this company, in my opinion, is not excelled in the region. The application of practically all known safeguards is rigidly enforced. Through their organization the most careful discipline is maintained, and all rules are strictly obeyed and carried out. This company has established some hard and fast rules, which, in my opinion, have prevented many accidents.

1st.—The rib has been slabbed and whitewashed through the entire length of all haulage roads, making an allowance of at least three feet between the side of car and rib, thus insuring more safety to the drivers.

2nd.—A system of posting has been installed, requiring the posts to be set in parallel lines, the maximum distance not to exceed four and a half feet apart, and they must be set within six feet of the face and as much closer in either case as in the judgment of the foreman the conditions of the roof demand.

3rd.—In all places where pillars are being removed, men of mature judgment are employed, and one is placed in each rib section. Their only duty is to instruct the workmen how, when and where to set their timbers and help them in making rib falls.

Collier.—A compressed air mine haulage was completed during the year.

An underground stable, of fire-proof construction, was built, the total length of which is 140 feet, having concrete side walls, with steel "I" beam ceiling, lagged with concrete slabs.

Two Jeffrey coal cutting machines and one low-stage Ingersoll-Rand compressor, 2,800 cubic feet capacity, were installed.

On the loaded side of the shaft bottom for a distance of fifty feet, and on the empty side for a distance of seventy-five feet, concrete side walls and steel "I" beams, covered with reinforced concrete laggings, were built.

An automatic steam empty-car lift was installed at the bottom of shaft, the first of the kind to be installed at any of the Frick Coke Company's mines.

Four permanent overcasts and fifty-one permanent stoppings, of fireproof construction, were built.

Continental No. 1.—Beyond the terminus of the present brick Arch, on loaded car side of shaft bottom, rubble masonry side walls, with steel "I" beam ceiling, were constructed for a distance of one hundred and fifteen feet, in order to secure additional protection for workmen.

A part of the air shaft was retimbered as a safety precaution.

The underground rope haulage was extended in the southeast, northwest, and on the Pike Flat Sections.

Five permanent overcasts and five permanent stoppings, of fire-proof construction, were built.

Continental No. 2.—A compressed air motor haulage was completed.

Four Jeffrey mining machines, puncher type, were installed. One permanent overcast and five stoppings, of fire-proof construction, were built.

Continental No. 3.—Two permanent overcasts and twenty-three permanent stoppings, of fire-proof construction, were built.

Crossland.—Five permanent overcasts and three permanent stoppings, of fire-proof construction, were built.

Hopwood.—Two permanent overcasts and eleven permanent stoppings, of fire-proof construction, were built.

Kyle.—Fifteen 28 foot by 32 foot double dwellings, complete, with outbuildings and water system for domestic use and fire protection, were completed.

Six permanent overcasts and ten permanent stoppings, of fire-proof construction, were built.

Leckrone.—Installed one 7-ton electric gathering locomotive.

Two permanent overcasts and forty-five permanent stoppings, of fire-proof construction, were built.

Leith.—A fire-proof roof, with steel trusses, was put on the boiler house, replacing the former wooden one.

Three permanent overcasts and seven permanent stoppings, of fire-proof construction, were built.

Oliphant.—An auxiliary air shaft was sunk from the surface to the coal seam in the vicinity of No. 11 Flat South, for an additional exit from the mine, and to assist in the efficiency of ventilation in the advance workings.

One permanent overcast, of fire-proof construction, was built.

Redstone.—The safety lamp equipment was changed from the old Clanny type to the Seippel lamp.

Three permanent overcasts and two permanent stoppings, of fire-proof construction, were built.

Shoaf.—One 7-ton Jeffrey gathering electric locomotive was installed.

Three permanent overcasts and thirty-two permanent stoppings, of fire-proof construction, were built at No. 1, and thirty-two stoppings, of fire-proof construction, were built at No. 2, or Smiley.

Yorkrun.—Additional mine pumping equipment, with necessary transformers, bore hole, etc., was started, but not completed.

Three permanent overcasts and twenty-five permanent stoppings, of fire-proof construction, were built.

#### OLIVER AND SNYDER STEEL COMPANY

Oliver No. 1.—A central pumping station installed, which will handle all the water from the Nos. 1, 2 and 3 plants.

Oliver No. 2.—A room has been driven into the strata near the shaft bottom and has been fitted and equipped with electric lights, hot and cold water, stretchers, blankets, linseed and olive oil, bandages, linen etc., to be used in case of emergencies.

In each rib section of these mines rib-bosses have been employed, their only duty being to look after the falls and timbering. Shot-firers have also been employed to do the shooting at night when all of the workmen are out of the mine. Only permissible explosives are used.

#### W. J. RAINEY

Revere.—A water wagon for sprinkling the dust has been installed. Safety lamps are used exclusively. The blasting is done with permissible explosives, when the workmen are out of the mine, except those engaged in the work. The development work in this mine is completed. Four permanent overcasts and ten permanent stoppings have been built.

#### BESSEMER COKE COMPANY

Griffin No. 1.—A water wagon has been installed to sprinkle the dust and shot-firers are employed to do the blasting when the workmen are out of the mine.

Griffin No. 2.—A pipe line sprinkling system has been installed to take care of the dust. An auxiliary fan fourteen feet in diameter, Cole type, has been installed. A rescue station has been erected near the mouth of the mine and is equipped with three helmets of the Draeger type and three electric safety lamps.

#### S. L. SMITH AND COMPANY

Evans.—The air ways of this mine have been enlarged and five permanent stoppings have been constructed.

#### GILMORE COKE COMPANY

Gilmore.—A new six-foot fan has been installed.

#### PLUMER COKE COMPANY

Plumer.—Safety lamps have been installed exclusively, and five permanent stoppings have been built.

### Mine Foremen's Examinations

The annual examination of applicants for certificates of qualification as Mine Foremen and Fire Bosses was held in the Court House, Uniontown, April 6, 7, 8 and 9. The Board of Examiners was composed of I. G. Roby, Inspector; George H. Reynolds, Superintendent; and John F. Dawson, Mine Foreman.

There were twenty-eight applicants examined for mine foremen's certificates and fifty for fire bosses' certificates. The following persons passed a satisfactory examination and were granted certificates of qualification as Mine Foremen:

#### First Grade

Mike Peters, William Hughes, Charles A. Wilson, Edward Wilkinson, Owen Thomas, Walter M. Dawson, James Curry, Edward McArdle.

#### Second Grade

Charles Moran, Ernest Krause.

## **SIXTH DISTRICT**

---

Johnstown, Pa., February 25, 1910.

Hon. James E. Roderick, Chief of Department of Mines:

Sir: I have the honor to transmit herewith my report as Inspector of Mines of the Sixth Bituminous District for the year ending December 31, 1909.

I was transferred to this district July 1, 1909, from the Ninth District.

The report contains the usual tables of statistics, together with remarks on general conditions of the mines, the report of the annual examination of candidates for certificates as Mine Foremen and Fire Bosses, and a brief description of fatal accidents.

Respectfully submitted,

THOMAS D. WILLIAMS,  
Inspector.

## SUMMARY OF STATISTICS

|                                                                       |           |
|-----------------------------------------------------------------------|-----------|
| Number of mines, .....                                                | 74        |
| Number of mines in operation, .....                                   | 66        |
| Number of tons of coal shipped to market, .....                       | 6,722,543 |
| Number of tons used at mines for steam and heat, .....                | 184,959   |
| Number of tons sold to local trade and used by employes, ..           | 111,433   |
| Number of tons used in the manufacture of coke, .....                 | 814,180   |
| Number of tons of coal produced, .....                                | 7,833,115 |
| Number of tons of coke produced, .....                                | 581,341   |
| Number of coke ovens, .....                                           | 425       |
| Number of coke ovens in operation, .....                              | 385       |
| Number of tons of coal produced by pick mining, .....                 | 4,379,208 |
| Number of tons produced by compressed air machines, ...               | 2,899,660 |
| Number of tons produced by electrical machines, .....                 | 554,247   |
| Number of persons employed inside of mines, .....                     | 10,112    |
| Number of persons employed outside, including coke<br>workers, .....  | 1,466     |
| Number of persons employed at manufacture of coke, ..                 | 293       |
| Number of fatal accidents inside of mines, .....                      | 54        |
| Number of fatal accidents outside, .....                              | 2         |
| Number of non-fatal accidents inside of mines, .....                  | 82        |
| Number of non-fatal accidents outside, .....                          | 4         |
| Number of tons of coal produced per fatal accident in-<br>side, ..... | 145,058   |
| Number of persons employed per fatal accident inside, ...             | 187       |
| Number of persons employed per fatal accident outside, ...            | 733       |
| Number of persons employed per non-fatal accident in-<br>side, .....  | 123       |
| Number of persons employed per non-fatal accident out-<br>side, ..... | 367       |
| Number of wives made widows, .....                                    | 22        |
| Number of children made orphans, .....                                | 51        |
| Number of steam locomotives used inside of mines, .....               | —         |
| Number of steam locomotives used outside, .....                       | 1         |
| Number of compressed air locomotives used inside, .....               | 7         |
| Number of compressed air locomotives used outside, ....               | —         |
| Number of electric motors used inside, .....                          | 93        |
| Number of electric motors used outside, .....                         | —         |
| Number of fans in use, .....                                          | 56        |
| Number of furnaces in use, .....                                      | 8         |
| Number of gaseous mines in operation, .....                           | 11        |
| Number of non-gaseous mines in operation, .....                       | 55        |
| Number of new mines opened, .....                                     | —         |
| Number of old mines abandoned, .....                                  | —         |

TABLE A  
PRODUCTION OF COAL

| Name of Operators                         | Tons      |

## FATAL ACCIDENTS

On the night of April 9 an explosion occurred in Eureka No. 37, Upper, mine, of the Berwind-White Coal Mining Company, by which seven men were killed. They were engaged at the time in blasting rock to make room for an overcast near the entrance of fourth right heading. It is supposed that they overcharged their shots and were killed by the flame of the blast. It is probable, however, that coal dust played a prominent part in the explosion, as some of the victims were found quite a distance from the point where the blast had been fired. While it is true that this part of the mine was practically free from dust, the sides and roof were dry, and the small quantity of dust present was a prominent factor in extending the flame and widening the range of the explosion.

On the afternoon of October 31 an explosion of coal dust occurred in a section of Franklin No. 2 mine, of the Cambria Steel Company, by which thirteen persons lost their lives and one was severely burned. The explosion occurred at the face of No. 11 parallel off fourth left main, where two miners were at work. The coal at this point was thin, and the heading only ten feet in width. In order to make progress they were allowed to drill four holes into the coal, varying in depth from five to six feet, one at each side or rib, and two holes about three feet apart toward the center of the heading. These holes were charged with dynamite and fired by different length of fuse (or time fuse) in order to allow the two holes near the center of the heading to go off a fraction of a second in advance of the side holes.

It was proved by witnesses that the men working in this eleventh parallel did not commence work until about 2.30 P. M. on the day of the explosion. They remained outside until about 2 o'clock, and in order to prepare a bottom shot for the men who were to follow them on the night turn they, undoubtedly, charged the holes at the face of this working place with a sufficient amount of dynamite to be doubly certain of doing the work.

## CONDITION OF MINES

### BERWIND-WHITE COAL MINING COMPANY

Eureka Nos. 32, 33, 34, 35, 35 Upper, 36, 37, 37 Upper, 40 and 42.—Conditions not satisfactory at the face of the major portion of the active workings in each mine, the air currents being too weak for efficient ventilation, due to excessive air splitting. Drainage and general conditions reasonably good.

Eureka No. 41.—Idle the greater part of the year.

Eureka No. 38.—Idle the entire year.

### CAMBRIA STEEL COMPANY

Rolling Mill.—Ventilation good. Drainage defective on haulage roads of No. 7 east off main south. No shelter holes provided on main dilly road.

Franklin Nos. 1 and 2.—Ventilation not up to the requirements at the face of active workings of several sections, in each mine. Drainage in No. 2 mine defective on some of the roadways.

Conemaugh Slope.—Ventilation weak and drainage defective in all the active workings, except the workings off lower end of main slope.

#### LOGAN COAL COMPANY

Logan No. 1.—Ventilation weak and drainage defective.

Logan No. 2.—Ventilation very unsatisfactory throughout the entire workings. Drainage fair.

Logan No. 4.—Ventilation and drainage reasonably good.

Logan No. 6.—Idle.

Logan No. 7.—In fair condition.

#### PENNSYLVANIA COAL AND COKE COMPANY

Pennsylvania No. 3.—Ventilation good except in some of the workings off No. 13 Plane Section. Drainage good.

Pennsylvania No. 5.—Idle.

Pennsylvania Nos. 6 and 8.—Ventilation and drainage good.

Pennsylvania No. 15.—Ventilation very unsatisfactory. No effort is made to guide and direct the air currents to the face of the workings. Drainage defective on No. 4 left heading.

#### STINEMAN COAL AND COKE COMPANY

Stineman Nos. 2 and 4.—The ventilation, drainage and other conditions reasonably good.

#### ARGYLE COAL COMPANY

Argyle No. 1.—Ventilation and drainage good.

Argyle No. 2.—In fair condition. The ventilation needed improvement in different places.

#### HENRIETTA COAL MINING COMPANY

Henrietta No. 1.—Ventilation and drainage fair.

Henrietta No. 2.—Ventilation not satisfactory in different sections.

#### STINEMAN COAL MINING COMPANY

Stineman No. 1.—Ventilation not up to the requirements, due to inadequate ventilating power and contracted airways. The local management is doing all in its power to bring the mine up to the requirements of the law.

#### SOUTH FORK COAL MINING COMPANY

South Fork No. 1.—In fair condition. The ventilation and drainage are much improved. Considerable effort is now being put forth to bring the mine up to a legal standard.

South Fork No. 2.—Ventilation poor, due to inadequate ventilating power. A new ventilating fan will be installed as soon as the weather conditions permit.

## VALLEY COAL AND STONE COMPANY

Valley.—Ventilation, drainage and general conditions reasonably good.

## J. BLAIR KENNERLY

Valley No. 2.—Ventilation fair. Drainage defective on major portion of haulage roads.

Valley No. 3.—Ventilation fair. Drainage good.

## ALTON COAL COMPANY

Alton.—Ventilation fair except at face of workings off upper level. Drainage defective on haulage road of A heading.

## SHADE COAL MINING COMPANY

Hagevo.—In fair condition as to ventilation and drainage.

## SUNNYSIDE COAL COMPANY

Sunnyside.—In good condition.

## LOYALHANNA COAL AND COKE COMPANY

Loyalhanna No. 3.—Ventilation fairly good. Drainage defective

## CITIZENS COAL COMPANY

Dale, Green Hill and Gautier.—Ventilation, drainage and general conditions good.

## MORRELLVILLE COAL MINING COMPANY

Morrellville.—In good condition.

## PRISCILLA COAL MINING COMPANY

Priscilla.—Ventilation and drainage reasonably good.

## NINEVAH COAL AND COKE COMPANY

Seward.—Ventilation, drainage and general conditions are up to the requirements of the law.

## RAY COAL COMPANY

Ray.—In fair condition.

## BEAVER RUN COAL COMPANY

Beaver Run Nos. 1 and 2.—Ventilation poor in the workings to left of main slope. Drainage defective throughout the entire mine.

## CAMBRIA COAL MINING COMPANY

Lloydell.—In fair sanitary condition.

## SUPPES COAL COMPANY

Suppes.—In reasonably good condition.

## YELLOW RUN COAL MINING COMPANY

Yellow Run Shaft.—Ventilation good. Drainage very poor on all haulage roads to right and left of main slope.

## BLAIRSVILLE COKE COMPANY

Strangford.—In fairly good condition.

## SAMUEL STYER

Radnor.—Ventilation and general conditions very poor, due to the neglect of the mine foreman to keep the ventilating furnace in operation and to provide shelter holes on haulage road.

## MARYLAND COAL COMPANY

Coleman Shaft.—Ventilation and drainage good.

## INGLESIDE COAL COMPANY

Ingleside.—Ventilation, drainage and general conditions fair.

## A. J. HAWS AND SONS, LIMITED

Haws Shaft and Coopersdale.—Ventilation and drainage good in each mine.

## FERNDALE COAL COMPANY

Ferndale.—Ventilation good. Drainage defective on parts of main traveling road.

## OLIVER STINEMAN

Stineman Nos. 3 and 3½.—Ventilation and drainage good.

## HIGHLAND COAL COMPANY

Highland.—In fair condition.

## KELSO SMOKELESS COAL COMPANY

Kelso.—In good condition.

## HARVEY STINEMAN

Stineman Nos. 5 and 6. In good sanitary condition.

## BOLIVAR COAL AND COKE COMPANY

Lockport.—Not inspected. Idle nearly the entire year.

## JOHNSTOWN COAL COMPANY

Cramer.—Ventilation and drainage poor.

## IMPROVEMENTS

## CAMBRIA STEEL COMPANY

Rolling Mill Mine.—On March 8 locked safety lamps were introduced into this mine, to be used exclusively. A large brick and concrete fireproof lamp-house was constructed at the drift mouth, with rack space to accommodate 1,024 safety lamps.

Only permissible explosives have been allowed in this mine during the year.

Franklin Mine No. 1.—A new main airway has been driven through faulty and low coal a distance of 1,130 feet, to provide proper ventilation for the right hand portion of the workings.

Permissible explosives were introduced October 14 to replace black powder. Since that time they have been substituted for dynamite also, so that at the present time nothing but permissible explosives are used.

Two reinforced concrete overcasts were constructed and have proved very satisfactory.

Franklin Mine No. 2.—On September 28 permissible explosives were introduced to take the place of black powder. Later, instructions were issued to use nothing but permissible explosives throughout the mine.

Two concrete brick overcasts were constructed for extending the ventilation.

Extensions were made to the electric haulage system to bring the motor haul as close as possible to the working places.

Conemaugh Slope.—On November 3 permissible explosives were introduced to take the place of black powder and dynamite.

## PENNSYLVANIA COAL AND COKE COMPANY

Pennsylvania No. 3.—A bore hole was put down at back end of No. 26 Section and connected with a system of pipe lines for the purpose of saturating the dust in the workings; one was also put down in No. 13 Plane Section, where a system of pipe lines is provided, branching into each pair of headings and provided with spraying connections.

A new airway is being driven from No. 19 to No. 26 heading and is about three-fourths completed.

Shelter holes have been made on all haulage roads, and traveling roads have been cleaned of obstructions and made passable. Safety lamps installed in all pillar workings.

## ARGYLE COAL COMPANY

Argyle No. 2.—A new twelve-foot Brazil fan installed.

## SOUTH FORK COAL MINING COMPANY

South Fork No. 1.—Air course from fan to face of active workings enlarged to seventy-five feet area. All airways enlarged and sixty-three permanent stoppings (made of mine rock laid in Portland ce-

ment) built between inlet and main return. All traveling roads cleaned of obstruction and shelter holes made on haulage roads. Safety lamps put in all pillar workings.

#### STINEMAN COAL MINING COMPANY

Stineman No. 1.—Main inlet airway enlarged from fan into the active workings, and eighty permanent stoppings built between main inlet airway and return airway, and two concrete overcasts built.

#### Mine Foremen's Examinations

The annual examination of applicants for certificates of qualification as Mine Foremen and Fire Bosses was held in the Municipal Building, Johnstown, April 6, 7, 8 and 9.

The Board of Examiners was composed of the following persons: Daniel R. Blower, Inspector; Peter Connor, Superintendent, and John Donaldson, Mine Foreman.

There were fifty-one applicants examined, thirty-one for certificates as Mine Foremen and twenty for certificates as Fire Bosses. The following persons having passed a satisfactory examination were granted certificates as Mine Foremen:

#### First Grade

Matthew Mulvibill, South Fork, and John P. Slevin, Coral.

#### Second Grade

William L. Dunmire, South Fork; George Simpson, Windber; Lewis Swain, Hooversville, and Clyde MacDonald, Windber.

## **SEVENTH DISTRICT**

---

ALLEGHENY, WASHINGTON AND BEAVER COUNTIES

---

Crafton, Pa., February 28, 1910.

Hon. James E. Roderick, Chief of Department of Mines: .

Sir: I have the honor to transmit herewith my first report as Inspector of Mines of the Seventh Bituminous District, for the year ending December 31, 1909. I assumed charge of this district July 1, 1909.

The report contains the usual tables and statistics, together with a brief report of the conditions of the mines and other information.

Respectfully submitted,

ARTHUR NEALE,  
Inspector.

## SUMMARY OF STATISTICS

|                                                                  |           |
|------------------------------------------------------------------|-----------|
| Number of mines, .....                                           | 54        |
| Number of mines in operation, .....                              | 47        |
| Number of tons of coal shipped to market, .....                  | 6,943,327 |
| Number of tons of coal used at mines for steam and heat, .....   | 179,274   |
| Number of tons sold to local trade and used by employes, .....   | 30,276    |
| Number of tons used in the manufacture of coke, .....            |           |
| Number of tons of coal produced, .....                           | 7,152,877 |
| Number of tons of coke produced, .....                           |           |
| Number of coke ovens, .....                                      |           |
| Number of coke ovens in operation, .....                         |           |
| Number of tons of coal produced by pick mining, .....            | 1,504,219 |
| Number of tons produced by compressed air machines, ...          | 1,218,798 |
| Number of tons produced by electrical machines, .....            | 4,429,860 |
| Number of persons employed inside of mines, .....                | 9,116     |
| Number of persons employed outside including coke workers, ..... | 992       |
| Number of persons employed at manufacture of coke, ....          |           |
| Number of fatal accidents inside of mines, .....                 | 16        |
| Number of fatal accidents outside, .....                         | 1         |
| Number of non-fatal accidents inside of mines, .....             | 50        |
| Number of non-fatal accidents outside, .....                     | 1         |
| Number of tons of coal produced per fatal accident inside, ..... | 447,055   |
| Number of persons employed per fatal accident inside, .....      | 570       |
| Number of persons employed per fatal accident outside, .....     | 992       |
| Number of persons employed per non-fatal accident inside, .....  | 182       |
| Number of persons employed per non-fatal accident outside, ..... | 992       |
| Number of wives made widows, .....                               | 9         |
| Number of children made orphans, .....                           | 20        |
| Number of steam locomotives used inside of mines, ....           |           |
| Number of steam locomotives used outside, .....                  | 1         |
| Number of compressed air locomotives used inside, .....          |           |
| Number of compressed air locomotives used outside, ....          |           |
| Number of electric motors used inside, .....                     | 72        |
| Number of electric motors used outside, .....                    |           |
| Number of fans in use, .....                                     | 53        |
| Number of furnaces in use, .....                                 | 2         |
| Number of gaseous mines in operation, .....                      | 28        |
| Number of non-gaseous mines in operation, .....                  | 19        |
| Number of new mines opened, .....                                |           |
| Number of old mines abandoned, .....                             | 7         |

TABLE A

| 24       | Isaiah Chadwick, -----  | English,---   | Miner, -----     | 38 | S. Blyth, -----                       | Allegheny, ----- | Ribs broken and back injured by fall of roof at face of pillar.                                         |
| 28       | John Wagner, -----      | Slavonian,--- | Miner, -----     | 23 | M. Moon Run No. 3,-----               | Allegheny, ----- | Head lacerated and internally injured by fall of slate at face of room.                                 |

## CONDITION OF MINES

## PITTSBURG COAL COMPANY

Bridgeville, Brier Hill, Creedmoor, Jumbo, Margerum, Moon Run No. 3, O. I. C., Partridge and Shaw mines in good condition. In Essen No. 2, Grant, Idlewood, Laurel Hill No. 5, Mansfield No. 2, Moon Run Nos. 1 and 2 and Ridgway mines the ventilation and drainage should be improved. Champion, Dickson, Essen No. 3 and Laurel Hill No. 2 mines did not come under the law.

## NATIONAL MINING COMPANY

National Nos. 1 and 2.—In good condition. Shot-firers are employed in these mines to fire all shots and have authority to refuse to put off any blast they think unsafe for any cause whatever.

## PITTSBURG AND EASTERN COAL COMPANY

Pittsburg and Eastern Nos. 1, 2 and 3.—In very good condition. No. 1 mine was idle the last four months of the year.

## CARNEGIE COAL COMPANY

Carnegie.—Ventilation needs improvement; drainage fair.

Oakdale.—In excellent condition.

Primrose.—Ventilation fair; drainage good.

## FAYETTE COAL COMPANY

Chalfant.—Ventilation should be improved; drainage good.

## PITTSBURG-BUFFALO COMPANY

Francis.—Ventilation good; drainage fair.

## PANHANDLE MINING COMPANY

Blyth.—Ventilation and drainage in good condition.

## VERNER COAL AND COKE COMPANY

Verner.—Ventilation needs improvement; drainage fair.

## BULGER BLOCK COAL COMPANY

Bulger.—Ventilation and drainage fair.

## HUGH McHUGH

Cherry.—Ventilation and drainage needed improvement in old part of the mine. New part in good condition.

## • PRYOR COAL COMPANY

Avella No. 1.—In good condition.

## HORMEL COAL COMPANY

Federal No. 2.—Ventilation needed improvement; drainage good.

## STEEN COAL COMPANY

Willa No. 2.—In good condition.

## J. H. SANFORD COAL COMPANY

Armide.—In splendid condition.

## McCLANE COAL COMPANY

Katie.—In very good condition.

## PITTSBURG AND SOUTHWESTERN COAL COMPANY

Donohoe.—Ventilation should be improved. Drainage satisfactory.

## PENOBSCOT COAL COMPANY

Penobscot.—Condition could be improved.

## MEADOW LANDS COAL COMPANY

Meadow Lands No. 3.—In fair condition.

## KIRKBRIDE COAL COMPANY

Kirkbride.—Ventilation and drainage unsatisfactory.

## WALTER J. FLANAGAN

Cedar Grove.—In splendid condition.

## ISLAND RUN COAL COMPANY

Dawson.—Ventilation unsatisfactory; drainage fair.

## McDONALD COAL COMPANY

Willow Grove.—Ventilation not satisfactory. Drainage fair.

## IMPROVEMENTS

## PITTSBURG COAL COMPANY
